NOTE 1.—Specie payments were suspended from January 1, 1862, to January 1, 1879. During the greater part of that period gold and silver coins were not in circulation except on the Pacific coast, where, it is estimated, the specie circulatien was generally about $25,000,000. This estimated amount is the only coin included in the above statement from 1862 to 1875, inclusive.

NOTE 2.—In 1876 subsidiary silver again came into use, and is included in this statement, beginning with that year.

NOTE 3.—The coinage of standard silver dollars began in 1878, under the act of February 28, 1878.

NOTE 4.—Specie payments were resumed January 1, 1879, and all gold and silver coins, as well as gold and silver bullion in the Treasury, are included in this statement from and after that date.

NOTE 5.—For redemption of outstanding certificates an exact equivalent in amount of the appropriate kinds of money is held in the Treasury, and is not included in the account of money held as assets of the Government.

NOTE 6.—This table represents the circulation of the United States as shown by the revised statements of the Treasury Department for June 30 of each of the years specified.

APPENDIX C.

Number of free white males over 15 years of age in the United States in 1850, engaged in some occupation, by industries in which engaged.

[Compiled from report of United States Census, 1850.]

Agriculture	2,435,282
Domestic and personal services	980,159
Fisheries	11,249
Manufacturing and mechanical industries	1,183,969
Mining	82,290
Professional	159,651
Trade	295,322
Transportation	159,646
Students	42,149
Unknown	22,159
Total	5,371,876

Number of persons in the United States in 1860, engaged in some occupation, by industries in which engaged.

[Compiled from report of United States Census, 1860.]

Agriculture	3,401,222
Domestic and personal services	1,689,558
Fisheries	26,755
Manufacturing and mechanical industries	1,829,872
Mining	158,157
Professional	329,052
Trade	492,120
Transportation	245,949
Students	49,993
Sisters of Charity and nuns	1,493
Unknown	62,872
Total	8,287,043

Number of persons (male and female), 10 years of age and over in the United States in 1870, 1880, 1890, and 1900, engaged in gainful reputable occupations, by industries.

[Compiled from reports of United States Censuses, 1870, 1880, 1890, and 1900.]

Industries.	1870.	1880.	1890.
Agriculture	5,948,561	7,701,144	8,565,926
Domestic and personal service	2,249,015	3,387,192	4,220,812
Fisheries	27,106	41,352	60,162
Manufacturing and mechanical industries	2,484,965	3,508,914	5,234,398
Mining	166,272	249,397	337,248
Professional	309,020	651,652	944,333
Trade	802,751	1,233,519	2,236,961
Transportation	428,233	618,929	1,085,821
Total	12,505,923	17,392,099	22,735,661

Statistics of manufactures in the United States at census periods from 1850 to 1900.

[From United States Census, 1880, Manufactures, pages 6, 7, 8, 9; United States Census, 1890, Manufactures, Part I, page 92; and United States Census, 1900, Bulletin No. 150, page 10.]

Year.	Capital invested.	Value of product.	Officers, firm members, and clerks.	Average number of operatives employed.	Total wages of operatives for the year.	Average wages of operatives per year.
1850	$533,245,351	$1,019,106,616	[a]	[b] 957,059	$236,755,464	$247.38
1860	1,009,855,715	1,885,861,676	[a]	[b] 1,311,246	378,878,966	288.95
1870	[c] 1,876,732,969	[d] 3,393,972,311	[a]	[b] 2,053,996	[e] 621,954,011	[f] 302.80
1880	2,790,272,606	5,369,579,191	[a]	[g] 2,732,595	947,953,795	346.91
1890	6,525,156,486	9,372,437,283	461,009	[c] 4,251,613	[h] 1,891,228,321	[i] 444.83
1900	9,874,664,087	13,040,013,633	970,798	[c] 5,321,087	[j] 2,330,273,021	[k] 437.93

[a] Not reported.
[b] Males above 16 and females above 15.
[c] Gold equivalent of $2,118,208,769 currency reported by census.
[d] Gold equivalent of $4,232,325,442 currency reported by census.
[e] Gold equivalent of $775,584,343 currency reported by census.
[f] Gold equivalent of $377.60 currency.
[g] Men, women, and children.
[h] Not including $391,988,208 paid officers, firm members, and clerks.
[i] Not including income and salaries of officers, firm members, and clerks.
[j] Not including $404,837,591 paid salaried officers and clerks.
[k] Not including salaries of officers and clerks.

Statistics of agriculture in the United States at census periods from 1850 to 1900.

[From United States Census, 1890, Agriculture, pages 84 and 85, and advance figures of United States Census, 1900, Agriculture.]

Year.	Number of farms.	Number of acres in farms.	Capital invested.	Value of farm products in preceding year.
1850	1,449,073	293,560,614	$3,967,343,580	[a]
1860	2,044,077	407,212,538	7,980,493,033	[a]
1870	2,659,985	407,735,041	[b] 9,856,713,450	[c] $1,962,722,042
1880	4,008,907	536,081,835	12,104,001,538	2,212,540,927
1890	4,564,641	623,218,619	15,982,267,689	2,460,107,454
1900	5,739,657	841,201,546	20,514,001,838	4,739,118,752

[a] Not reported.
[b] Gold equivalent of $11,124,958,747 currency reported by census.
[c] Gold equivalent of $2,447,538,658 currency reported by census.

Mr. Powers, in charge of agriculture in the United States census of 1900, states that the values of products given for 1870, 1880, and 1890 are undoubtedly incorrect, and that the figures for 1890 especially fall below the true amount.

Statistics of railroads in the United States from 1830 to 1900.

Year.	Miles of single track.	Number of employees.	Capital invested.
1830	[a] 39.80	[b]	[b]
1840	[a] 2,755.18	[b]	[b]
1850	[a] 8,571.48	[c] 4,831	[d] $296,060,148
1860	[a] 28,919.79	[c] 36,567	[d] 1,151,560,829
1870	[a] 49,168.33	[f] 163,303	[b]
1880	[a] 87,724.08	[g] 418,957	[h] 5,658,914,158
1890	[i] 163,597	[j] 749,301	[k] 9,437,343,420
1900	[i] 193,345.78	[j] 1,017,653	[k] 11,491,094,960

[a] From United States Census, 1890, Transportation by Land, page 6.
[b] Not reported.
[c] From United States Census, 1850, page LXXV.
[d] From United States Census, 1860, Mortality and Miscellaneous Statistics, page 331.
[e] From United States Census, 1860, Population, page 672.

[h] From United States Census, 1880, Transportation, page 5.
[i] From Interstate Commerce, Statistics of Railways, 1900, page 15.
[j] From Interstate Commerce, Statistics of Railways, 1900, pages 34 and 35.
[k] From Interstate Commerce, Statistics of Railways, 1900, page 53.

Number of persons (male and female) 10 years of age and over in the United States in 1900 engaged in gainful, reputable occupations, by industries.

Agriculture	10,381,765
Domestic and personal service	5,580,657
Fisheries	68,177
Manufacturing and mechanical industries	6,453,949
Mining and quarrying	563,866
Professional	1,258,739
Trade	3,310,199
Transportation	1,456,765
Total	29,074,117

The figures for 1900 are exclusive of persons in Alaska and the Hawaiian Islands and persons abroad.

APPENDIX D.

Stock of gold and silver coin in the United States.

Year ending June 30—	Gold.	Silver.	
		Standard dollars.	Subsidiary coin.
1878	$205,704,875	$8,573,500	[a] $71,778,828
1879	240,496,003	35,801,000	[a] 76,249,985
1880	308,633,996	63,734,750	[a] 78,862,270
1881	389,452,058	91,372,705	[a] 80,087,061
1882	450,557,490	119,144,780	[a] 80,428,580
1883	486,930,099	147,255,899	[a] 80,930,300
1884	501,307,747	175,355,829	[b] 75,261,528
1885	521,849,941	203,884,381	74,939,820
1886	548,320,031	233,723,296	75,060,937
1887	569,008,065	266,990,117	75,547,799
1888	595,349,897	299,708,790	76,406,376
1889	614,068,360	333,502,650	76,601,836
1890	629,932,449	369,426,466	76,825,305
1891	585,140,050	405,659,268	77,848,700
1892	589,179,550	413,988,735	77,521,478
1893	519,156,102	419,332,450	77,415,123
1894	582,512,083	419,323,208	76,249,925
1895	579,400,907	423,289,219	76,954,434
1896	567,495,088	430,790,041	75,971,507
1897	670,698,914	451,993,742	75,818,339
1898	764,826,198	461,996,522	76,127,610
1899	842,982,733	478,566,231	74,866,552
1900	921,258,733	496,257,190	82,863,742
1901	1,015,433,325	520,624,254	89,822,771
1902 (April 1)	1,063,358,703	536,120,929	93,417,944

[a] Includes trade dollars.
[b] Trade dollars estimated to be in the country, $6,000,000, deducted.

APPENDIX E.

Statement of the gold and silver certificates issued, redeemed, and outstanding at the close of each fiscal year from 1879 to 1902.

Fiscal year.	Gold certificates.			Silver certificates.		
	Issued.	Redeemed.	Outstanding.	Issued.	Redeemed.	Outstanding.
1879	$12,317,400	$41,270,700	$15,413,700	$9,149,590	$8,460,050	$2,539,950
1880		7,409,100	8,004,600	10,018,000	183,680	12,374,270
1881		2,221,680	5,782,920	40,912,000	2,119,740	51,166,530
1882		745,800	5,037,120	24,300,000	9,369,820	65,036,710
1883	86,710,000	9,358,480	82,378,640	35,040,000	12,519,870	88,616,831
1884	41,470,000	25,455,980	98,392,660	52,280,000	20,005,140	120,891,691

APPENDIX J.

HISTORICAL TABLE.

Total value of imports and exports into and from the United States, 1790 to 1901.

[NOTE.—Excess of imports in *italics*, excess of exports in bold-face type.]

Fiscal year.[a]	Merchandise.			Specie.		
	Imports.	Exports.	Excess of imports (italics) or exports (bold face).	Imports.		
				Gold.	Silver.	Total.
1790	$23,000,000	$20,205,156	*$2,794,844*			
1791	29,200,000	19,012,041	*10,187,959*			
1792	31,500,000	20,753,098	*10,746,902*			
1793	31,100,000	26,109,572	*4,990,428*			
1794	34,600,000	33,043,725	*1,556,275*			
1795	69,756,268	47,989,872	*21,766,396*			
1796	81,436,164	58,574,625	*22,861,539*			
1797	75,379,406	51,294,710	*24,084,696*			
1798	68,551,700	61,327,411	*7,224,289*			
1799	79,069,148	78,665,522	*403,626*			
1800	91,252,768	70,971,780	*20,280,988*			
1801	111,363,511	93,020,513	*18,342,998*			
1802	76,333,333	71,957,144	*4,376,189*			
1803	64,666,666	55,800,033	*8,866,633*			
1804	85,000,000	77,699,074	*7,300,926*			
1805	120,600,000	95,566,021	*25,033,979*			
1806	129,410,000	101,536,963	*27,873,037*			
1807	138,500,000	108,343,150	*30,156,850*			
1808	56,990,000	22,430,960	*34,559,040*			
1809	59,400,000	52,203,233	*7,196,767*			
1810	85,400,000	66,757,970	*18,642,030*			
1811	53,400,000	61,316,832	**7,916,832**			
1812	77,030,000	38,527,236	*38,502,764*			
1813	22,005,000	27,856,017	**5,851,017**			
1814	12,965,000	6,927,441	*6,037,559*			
1815	113,041,274	52,557,753	*60,483,521*			
1816	147,103,000	81,920,052	*65,182,948*			
1817	99,250,000	87,671,569	*11,578,431*			
1818	121,750,000	93,281,133	*28,468,867*			
1819	87,125,000	70,142,521	*16,982,479*			
1820	74,450,000	69,691,669	*4,758,331*			
1821[b]	54,520,834	54,596,323	**75,489**			$8,064,890
1822	79,871,695	61,350,101	*18,521,594*			3,369,845
1823	72,481,371	68,326,043	*4,155,328*			5,097,896
1824	72,169,172	68,972,105	*3,197,067*			8,378,970
1825	90,189,310	90,738,333	**549,023**			6,150,765
1826	78,093,511	72,890,789	*5,202,722*			6,880,966
1827	71,332,938	74,309,947	**2,977,009**			8,151,130
1828	81,020,083	64,021,210	*16,998,873*			7,489,741
1829	67,088,915	67,434,651	**345,736**			7,403,612
1830	62,720,956	71,670,735	**8,949,779**			8,155,964

[a] Fiscal year ended September 30 prior to 1843; since that date ended June 30.

[b] Specie included with merchandise prior to 1821.

Total value of imports and exports into and from the United States, 1790 to 1901—Continued.

Fiscal year.[a]	Merchandise.			Specie.		
				Imports.

[a] Fiscal year ended September 30 prior to 1843; since that date ended June 30.
[b] Specie included with merchandise prior to 1821.
[c] Gold and silver not separately stated prior to 1864.

NOTE.—Merchandise and specie are combined in the columns at right of table for the purpose of showing the total inward and outward movement of values by years.

APPENDIX K.

GERMANY.

Excess of imports or exports and condition of the Imperial German Bank.

Year.	Excess of imports or exports.		Condition of the German Imperial Bank.

aExcess of exports.

NOTE.—The data relative to the condition of the bank are average figures for the years in question.

APPENDIX N.

Statement showing the amounts of money in the United States, in the Treasury and in circulation, on the dates specified.

JULY 1, 1879.

[Population, 48,866,000; circulation per capita, $16.79.]

	General stock of money in United States.	Held in Treasury as assets of the Government.	Amount in circulation.
Gold coin, including bullion in Treasury	$245,741,837	$119,956,655	$110,505,362
Gold certificates			15,279,820
Standard silver dollars	41,276,356	32,825,437	8,033,439
Silver certificates			414,480
Subsidiary silver	70,249,985	8,903,401	61,346,534
United States notes	346,681,016	45,036,904	301,644,112
National-bank notes	329,691,697	8,286,701	321,404,996
Total	1,033,640,891	215,009,098	818,631,793

JULY 1, 1880.

[Population, 50,155,783; circulation per capita, $19.41.]

Gold coin, including bullion in Treasury	$351,841,206	$118,181,527	$225,695,779
Gold certificates			7,963,900
Standard silver dollars	69,660,408	43,760,282	20,110,557
Silver certificates			5,789,599
Subsidiary silver	72,862,270	24,350,482	48,511,788
United States notes	346,681,016	18,785,559	327,895,457
National-bank notes	344,505,427	7,090,249	337,415,178
Total	1,185,550,327	212,168,099	973,382,228

JULY 1, 1881.

[Population, 51,316,000; circulation per capita, $21.71.]

Gold coin, including bullion in Treasury	$478,484,538	$157,412,141	$315,312,877
Gold certificates			5,759,520
Standard silver dollars	95,297,083	26,843,942	29,342,412
Silver certificates			39,110,729
Subsidiary silver	74,087,061	27,247,697	46,839,364
United States notes	346,681,016	18,554,092	328,126,924
National-bank notes	355,042,675	5,296,382	349,746,293
Total	1,349,592,373	235,354,254	1,114,238,119

Statement showing the amounts of money in the United States, etc.—Continued.

JULY 1, 1882.

[Population, 52,495,000; circulation per capita, $22.37.]

	General stock of money in United States.	Held in Treasury as assets of the Government.	Amount in circulation.
Gold coin, including bullion in Treasury	$506,757,715	$143,477,370	$358,251,325
Gold certificates			5,029,020
Standard silver dollars	122,788,544	35,878,634	32,403,820
Silver certificates			54,506,090
Subsidiary silver	74,428,580	28,048,631	46,379,949
United States notes	346,681,016	21,425,589	325,255,427
National-bank notes	358,742,034	6,277,246	352,464,788
Total	1,409,397,889	235,107,470	1,174,290,419

JULY 1, 1883.

[Population, 53,693,000; circulation per capita, $22.91.]

Gold coin, including bullion in Treasury	$542,732,063	$138,271,198	$344,653,495
Gold certificates			59,807,370
Standard silver dollars	152,047,685	43,775,549	35,651,450
Silver certificates			72,620,686
Subsidiary silver	74,960,300	28,486,001	46,474,299
United States notes	346,681,016	23,438,839	323,242,177
National-bank notes	356,073,281	8,217,062	347,856,219
Total	1,472,494,345	242,188,649	1,230,305,696

JULY 1, 1884.

[Population, 54,911,000; circulation per capita, $22.65.]

Gold coin, including bullion in Treasury	$545,500,797	$133,729,954	$340,624,203
Gold certificates			71,146,640
Standard silver dollars	180,306,614	43,189,403	40,690,200
Silver certificates			96,427,011
Subsidiary silver	75,261,528	29,600,720	45,660,808
United States notes	346,681,016	27,993,802	318,687,214
National-bank notes	339,499,883	8,809,990	330,689,893
Total	1,487,249,838	243,323,869	1,243,925,969

Statement showing the amounts of money in the United States, etc.—Continued.

JULY 1, 1885.

[Population, 56,148,000; circulation per capita, $23.02.]

During the quarter ended March 31	$106,820,349.66
During the quarter ended June 30	4,535,226.41
Total	111,355,612.07

APPENDIX P.

CLEARINGS.

[From the Commercial and Financial Chronicle, January 11, 1902.]

Very naturally the records of bank clearings for 1901 partake of the character of the business conditions which prevailed in that year. The volume of trade during 1901 was of unsurpassed magnitude. Stock exchange speculation, too, far exceeded that of the most active previous year. At the same time the year was marked by the carrying through of financial undertakings of huge dimensions—the organization, for instance, of the United States Steel Corporation, the purchase by the Hill-Morgan people of the Burlington and Quincy, the acquisition by the Harriman Kuhn, Loeb & Co. interests of the Southern Pacific, etc. Under these circumstances it was inevitable that the totals of clearings should rise to previously unequaled proportions. The extent of the expansion will nevertheless be a surprise, we imagine. It furnishes striking testimony to the phenomenal activity which distinguished this period of twelve months.

It is hardly needful to say that the increase in clearings has been especially marked at this center, where so much of the country's speculation and so many of its financial operations are carried on. Here there had been a falling off the previous year in the aggregate of exchanges as compared with the extraordinary total of 1899—13.4 per cent decrease. For 1901 there is an increase over 1900 of more than 50 per cent. Even outside of New York, however, where the clearings in 1900 had held their own, there is a gain of 16.5 per cent. For the whole country the addition has been 37.5 per cent, which follows a loss of 8.5 per cent in 1900, but a gain of 36.6 per cent in 1899, of 20.2 per cent in 1898, and of 11.7 per cent in 1897.

In amount the 37.5 per cent addition of 1901 represents an increase of over thirty-two thousand million dollars, which figure will probably impress the reader more forcibly than mere words could do. The grand aggregate of the clearings for 1901 is one hundred and eighteen and one-half thousand million dollars, as against eighty-six thousand millions in 1900, ninety-four thousand millions in 1899, sixty-nine thousand millions in 1898, and fifty-seven thousand millions in 1897. It will be observed that the total for 1901 is more than 100 per cent greater than that for 1897, only four years before. As a matter of fact it is almost double the amount of every year preceding 1898, which shows how rapidly the country's activities have been expanding recently. The following is the clearings record back to 1880:

CLEARINGS.

Year.	New York clearings.	Per cent increase (+) or decrease (−).	Clearings outside New York.	Per cent increase (+) or decrease (−).	Total clearings.	Per cent increase (+) or decrease (−).

The gains extended through every month of the year, there being no month recording a lower total than the corresponding month of 1900, either with or without New York. During the first ten months, when comparison was with diminished figures in 1900, the percentages of increase were very heavy, ranging from 25 to 75 per cent. In November and December, when comparison was with increased totals in 1900 (the reelection of President McKinley having at that time occasioned a revival both of speculation and of business) the percentages of gain were more moderate.

When the different cities are arranged in groups according to their location, a pretty close uniformity is found to exist in the percentages of increase—barring the Middle group, where the inclusion of New York makes the percentage large—namely, 46.4 per cent. For the New England group the increase is 15.5 per cent; for the Middle Western, 16.4 per cent; for the far Western,

11.8 per cent; for the Pacific, 17.7 per cent, and for the Southern, 18.2 per cent.

Here is a table showing the clearings by groups for every quarter of the last five years:

Clearings reported.		First quarter.	Second quarter.	Third quarter.	Fourth quarter.	Total year.
New York	1901	$19,911,550,000	$24,823,103,000	$16,058,614,000	$18,634,419,000	$79,427,686,000

In the Chronicle of Saturday, January 4, 1902, we gave a detailed statement showing the figures for the last two years at each city.

There are only four places in the whole country which, for one reason or another, fail to have an increase over 1900. In the following we furnish a four-year comparison of the totals for the leading cities—for December and the full twelve months:

Bank clearings at leading cities.

	December.				Jan. 1 to Dec. 31.			
	1901.	1900.	1899.	1898.	1901.	1900.	1899.	1898.

On the New York Stock Exchange, as everyone is aware, dealings during the early months were on an unparalleled scale, the speculation eventuating in the May panic. In April the sales on the Stock Exchange aggregated 41,719,086 shares, as against 54,654,096 shares for the full year 1896, and on April 30 all records for a single day were broken in a total of 3,281,226 shares. After that the volume of business fell off, but still remained more than ordinarily large. We subjoin the monthly record for the two years.

Year	265,944,659	25,849,988,825	20,431,060,551	138,380,184	13,371,706,112	9,249,285,109

For the twelve months the sales foot up roughly 266,000,000 shares, which is nearly double the total of 138,000,000 for 1900, and compares with 176,000,000 shares for 1899, the previous maximum. In 1897 the sales were only 77,000,000 shares.

Number and value of shares sold at New York Stock Exchange.

Year.	Stocks, shares.[a]	Average price.	Values (approximate).[b]
1901	265,944,659	79.0	$20,431,960,551

1887	84,914,616	61.1	4,508,778,899
1886	100,802,050	65.6	5,885,662,200

[a] The shares of stocks we take from the record kept by the Journal of Commerce for the years 1882 to 1884, inclusive; since 1885 the totals are our own compilation.

[b] The values of sales, except for the year 1882 (figures made up by The Public), are our own compilations.

Number and value of shares sold at New York Stock Exchange—Continued.

Year.	Stocks shares.	Average price.	Values (approximate).
1885	92,538,947	64.1	$5,479,859,840
1884	96,154,971	61.77	5,939,500,000
1883	97,049,909	64.51	6,260,809,961
1882	116,307,271	66.12	7,689,453,436

It remains to add that the bond sales were also of unusual volume, the dealings in railroad and miscellaneous bonds being $994,235,400 for 1901, against $569,159,000 for 1900, $826,711,400 for 1899, $888,747,630 for 1898, $529,843,960 for 1897, and $363,158,820 for 1896.

As to the mercantile exchanges, there are no records for the cotton exchange. Even in the case of the produce exchange no official data are kept. In this last instance, however, we have made up the following from the figures given from day to day in the daily papers, and this ought to furnish a pretty close approximation to the actual result. Notwithstanding the speculative activity which prevailed at times in the grain markets, as a result of the corn-crop shortage, the combined total of spot and option sales for 1901, it will be seen, is only 869,516,075 bushels, as against 1,095,532,330 bushels for 1900 and 824,685,480 bushels for 1899.

1901	62	3,515,037,741.05	11,600,784.62	4.57
Total		64,885,824,657.44	4,415,804.04	4.77

[Extracts from manager's annual report for year ending September 30, 1901.]

Largest daily transactions on record, May 10, 1901:

Exchanges	$598,537,409.64
Balances	23,873,115.92
Total	622,410,525.56
Largest balances March 5, 1901	24,170,338.08

The debit balances were paid in as follows:

United States bearer gold certificates	$393,274,000.00
United States order gold certificates	18,940,000.00
Clearing-house gold certificates	3,094,755,000.00
United States-legal tender certificates	380,000.00
United States legal tenders and change	4,688,741.05
Total	3,515,037,741.05

Transactions of the United States assistant treasurer at New York:

Debit exchanges	$451,733,788.49
Credit exchanges	222,606,869.20
Debit balances	233,551,426.01
Credit balances	4,426,506.72
Excess of debit balances	229,124,919.29

The association is now composed of 43 national banks and 18 State banks. The assistant treasurer United States, at New York, also makes his exchanges at the clearing house.

There are 79 banks and trust companies in the city and vicinity not members of the association which make their exchanges through banks that are members, in accordance with the resolution adopted October 14, 1890.

[Extracts from manager's annual report for year ending September 30, 1901.]

The clearing-house transactions for the year have been as follows:

Exchanges	$77,020,672,493.65
Balances	3,515,037,741.05
Total transactions	80,535,710,234.70

The average daily transactions:

Exchanges	$254,193,638.59
Balances	11,600,784.62
Total	265,793,423.21

Total transactions since organization of clearing house (48 years):

Exchanges	$1,360,408,679,557.19
Balances	64,885,824,657.44
Total	1,425,294,504,214.63
Largest exchanges on any one day during the year (May 10, 1901)	598,537,409.64
Largest balances on any one day during the year (March 5, 1901)	24,170,338.08
Largest transactions on any one day during the year (May 10, 1901)	622,410,525.56
Smallest exchanges on any one day during the year (April 6, 1901)	94,138,035.55
Smallest balances on any one day during the year (August 5, 1901)	4,916,501.96
Smallest transactions on any one day during the year (April 6, 1901)	100,561,343.96

APPENDIX Q.

CREDIT INSTRUMENTS IN BUSINESS.

Previous investigations made of substitutes for money.

It will be interesting and proper in this connection to review briefly the history of previous attempts to determine the amount of credit instruments used in business. The first information of importance published on this subject was that furnished in a report of the committee of the House of Commons on the crisis of 1857. That report contains an analysis of the operations of the banking house of Mr. Slater for 1856, in which he gives the following table,* showing the proportion in which each million of receipts and expenditures were made in money and the various forms of credit:

RECEIPTS.

In bankers' drafts and mercantile bills payable after date.	£533,596	
Checks payable on demand	357,715	
Country bankers' notes	9,627	
		£900,938
Bank of England notes	68,554	
Gold	28,089	
Silver and copper	1,486	
Post-office orders	933	
		99,062
Total		1,000,000

PAYMENTS.

By bills of exchange	302,674	
Checks on London bankers	663,672	
		966,346
Bank of England notes	22,743	
Gold	9,427	
Silver and copper	1,484	
		33,654
Total		1,000,000

This table shows that in the operations of this banking house gold and silver entered to an extent of less than 3 per cent, Bank of England notes to 7 per cent, credit instruments 90 per cent. Of the payments, gold and silver formed 1 per cent, bank notes 2 per cent, credit instruments 97 per cent.

The next data of importance on the subject given to the public were furnished by Sir John Lubbock in his article "Country

*The table is taken from McLeod's Theory and Practice of Banking.

clearing," published in the Journal of the London Statistical Society, September, 1865. The account, as follows, is taken from the report of the Comptroller of the Currency for 1881:

	Pounds sterling.	Per cent.
Clearing	16,346,000	70.8
Checks and bills which did not pass through the clearing house	5,394,000	23.4
Bank notes	1,137,000	4.9
Coin	139,000	.6
Country notes	79,000	.3
Total	23,095,000	100

"It would appear from this that out of £1,000,000 rather more than £700,000 passes through the clearing house. The second account given above, £5,394,000, includes, of course, the transfers made in our own books from the account of one customer to that of another. These amount to £3,603,000, the remainder, £1,791,000, representing the checks and bills on bankers which did not clear.

"In order to ascertain the proportion of payments made in bank notes and coin in town, I have taken the amount, £17,000,000, paid in by our London customers. This was made up as follows:

	Pounds sterling.	Per cent.
Checks and bills on clear in bankers	13,000,000	77.4
Checks and bills on ourselves	1,600,000	9.5
Checks and bills on other bankers	1,400,000	8.3
Bank of England notes	674,470	4.
Country bank notes	9,570	.1
Coin	117,960	.7
Total	16,802,000	100

"The above amount of bank notes, small as it is, must, I think, be still further reduced. All the clearing bankers have accounts at the Bank of England, and as we require notes to supply our till, we draw them from the Bank of England, crediting the bank in our books. Out of the above amount of £674,470, £266,000 were notes drawn by us from the bank to replenish our till, and did not represent the amount paid in by our customers to their credit. On the other hand, we must add the amount of notes paid in for collection, and deduct the loans on security which pass through the different set of books, and which represent the sum of £2,460,686.

"Making these alterations, we find that out of £19,000,000 credit to our town customers, £408,000 consisted of bank notes, £79,000 of country bank notes, and £118,000 of coin.

	Pounds sterling.	Per cent.
Checks and bills	18,395,000	96.8
Bank notes	408,000	2.2
Country notes	79,000	.4
Coin	118,000	.6
Total	19,000,000	100

It has been objected that Sir John Lubbock's statistics do not fairly represent the proportion of payments made in England with ready money, on the ground that his bank did not afford accurate indications of the character of the commercial transactions of all England. The objection, it would seem, is well founded. Certainly the returns did not furnish a sufficient basis for safe conclusions.

Among the returns obtained in the present investigation was a statement from a Chicago banking house of its total transactions for the first six months of 1896, which showed that only twenty-two one-hundredths of 1 per cent of the whole six months' business was in "currency." It would hardly be fair to conclude that the business of all similar houses was performed on an equally small basis of money. Indeed, in no case among the returns of the present investigation is there a similar instance.

The next data on this subject were gathered in this country by the Treasury Department at the request of President Garfield, then in the House of Representatives. In his speech on resumption, November 16, 1877, he stated that when he was chairman of the Committee on Banking and Currency in 1871 he requested the Comptroller of the Currency to secure for him data on the subject from 52 selected banks. He goes on to say:

"I selected three groups; the first was the city banks, the second consisted of banks in cities of the size of Toledo and Dayton in the State of Ohio. In the third group, if I may coin a word, I selected the 'countriest' banks, the smallest that could be found, at points away from railroads and telegraphs. The order was that those banks should analyze all their receipts for six consecutive days, putting into one list all that can be called cash—either coin, greenbacks, bank notes, or coupons—and into the other list all drafts, checks, or commercial bills. What was the result? During those six days $157,000,000 were received over the counters of the 52 banks, and of that amount $19,370,000—12 per cent only—was in cash, and 88 per cent, that vast amount representing every grade of business, was in checks, drafts, and commercial bills."

Following this effort to secure data on the subject was the one made by the Comptroller of the Currency in 1881. On two dates, June 30 and September 17 of that year, he asked the national banks for classified returns of their receipts and payments. As shown by the tables incorporated in this report, returns were received in June from 1,966 of the 2,106 national banks in operation, and for September 17 returns were received from 2,132, being all the national banks in operation at that date. It will be seen by the tables that the gold coin in the returns on the first date amounted to sixty-five hundredths of 1 per cent of the total receipts, and the silver coin to sixteen one-hundredths of 1 per cent; the paper money was 4.6 per cent, and checks and drafts were 91.77 per cent. The Comptroller gives 95.13 per cent as the total percentage of credit instruments used for payments, according to these returns. In this, however, he includes clearing-house certificates. The same thing was done in subsequent reports in 1890 and 1892. Inasmuch, however, as these clearing-house certificates are really certificates of deposit of currency, they can not be properly classed with checks and drafts. They should therefore be left out in figuring the total percentage of credit instruments. On September 17 of the same year gold coin formed 1.38 per cent of the receipts of the national banks; silver coin, seventeen hundredths of 1 per cent; paper, 4.36 per cent; checks and drafts, 91.85 per cent. The Comptroller includes clearing-house certificates again, and so makes the total per cent of credit instruments 94.09. Other totals may be gathered from the tables, which are inserted in the report for the purpose of comparison.

TABLE I.—*Analysis of national-bank receipts, June 30 and September 17, 1881.*

Items.	June 30—1,966 banks.		Sept. 17—2,132 banks.	
	Amount.	Per cent.	Amount.	Per cent.
Checks, drafts, and bills	$261,271,666	91.77	$271,036,525	91.85
Clearing-house certificates	9,582,500	3.36	6,592,337	2.24
Paper money	11,554,747	4.06	13,026,570	4.36
Gold coin	1,864,105	.65	4,078,044	1.38
Silver coin	440,998	.16	500,301	.17
Total	284,714,016	100	295,233,779	100

In his report for 1881 the Comptroller also discusses the use of checks in France, England, Scotland, and Ireland. In France, as is well known, "the use of deposits, bank accounts, and checks is still in its infancy." In the past ten years, however, their use has doubtless increased. The Bank of France for several years made an effort to persuade the public to use them to a larger extent, and offered advantages to those who kept current accounts in the shape of better facilities for "transfer from one place to another free of cost for all sums proceeding from discount operations or the encashment of documents on demand. We have desired to proceed further with this plan, and we have just completed the first arrangement by giving to all those who had current accounts with us, without exception, a means of disposing by open checks of the whole of the sums which stand to their credit. These checks * * * will be delivered gratuitously when they are drawn against the proceeds or discounts of drafts on demand encashed by the bank, and they will be made payable in all our establishments indifferently."[a]

In England banking has reached a high stage of development, and the percentage of credit instruments used in transactions in that country probably runs as high as it does in our own. The London Banker's Magazine for November, 1881, gives data from which the comptroller of the currency in that year reported that the percentage of checks in the receipts of London banks averaged 97.23; in the banks of Edinburg, 86.78; in the banks of Dublin, 89.90, and in the country banks, in 261 places, 72.86.

In the same report of the comptroller is given a table showing the percentage of bank notes, coin, and checks used in the transactions of several English banking houses. In one case 90 per cent of the total receipts consisted of bills and checks, and 97 per cent of the payments were of the same character.

Two banks of Manchester showed 47 per cent, 58 per cent, and 68 per cent of total payments in credit instruments in the years 1859, 1864, and 1872, respectively. In still another case, the transactions of an English banking house for six working days in each

[a] Report of the Bank of France for 1880, as quoted in report of the Comptroller for 1881.

month for a period of seven months in 1878 and 1879 showed 96.5 per cent of the total receipts in credit instruments and 96.9 per cent of the total payments in paper of the same character. The foreign data, however, are small and insignificant when compared with those which have been obtained from investigations in this country.

The subject was investigated again in 1890 and 1892. In the former year, on July 1, checks, drafts, etc., constituted 91.46 per cent of the total receipts of 3,364 banks. In September the percentage for 3,474 banks was 90.3. Tables II and III show the details. If clearing-house certificates are included, the percents are 92.5 and 91.04 for 1890 and 90.61 for 1892.

TABLE II.—*Analysis of national-bank receipts, July 1 and September 17, 1890.*

The Comptroller notes as a conspicuous change the increase in the percentage of credit instruments returned by country banks from 14.11 per cent in June, 1881, to 25.28 per cent in September, 1892. He summarizes the results as follows:

"The variations in the percentage of the different kinds of money, checks, drafts received, as shown in the statistics for September 15, 1892, do not essentially vary from those of 1890 and 1891. The percentage shows a decrease for each of the three years reported and a corresponding increase in the amount of cash received by the banks over their counters."

A study of the results of the investigations thus far discussed shows that although they are very valuable as throwing light on the extent to which the credit instruments enter into payments for all classes of transactions, they are not satisfactory as a means of determining the percentage of such paper used in the actual trade of the country.

In the first place, the figures obtained show the total receipts of the banks. The receipts of a bank during a given day may be very different from its deposits, inasmuch as the receipts will usually include bills for collection, checks presented for cashing, notes discounted, and various other items which go to swell the total per cent of credit paper. In the second place, the results received furnish no satisfactory means of distinguishing between the credit paper that passed in consequence of speculative transactions and that which represents real trade. Still further, no measures were taken to have the returns classified on the basis of the different classes of business. And, finally, no investigation was made into incidental influences affecting the use of checks.

In consequence of these and other defects the inquiry of 1894 was instituted. This investigation was confined entirely to retail trade. It called for the deposits received by the national banks from certain classes of retail traders insterd of for the total receipts of the banks. The banks were requested to specify the amount of each of the different kinds of money and the amount of checks and other instruments of credit in the deposits of retail grocers, butchers, clothiers, furniture dealers, and fuel dealers. The day selected for securing the data was the settling day nearest the 30th of June. These five classes of retail dealers were selected for the reason that the purchase of their products represents the principal part of the expenses of living of the people at large. Hence, any data received concerning the mode of payment in transactions of this kind it was thought would be valuable as showing the extent to which credit paper actually was used in trade payments. "Settling day" was selected on the supposition that the returns on such a day would be more likely than any other to show the normal volume of trade and the normal volume of checks deposited.

Information was also sought concerning the length of period of credit in retail trade; the length of the wages period; the method of payment of wages, whether by checks or in money, and the extent to which wage checks are cashed by merchants. The purpose of this last was to secure some information whereby correction could be made for the deposit by merchants of pay checks which they had simply cashed instead of receiving in payment for goods. The results of the investigation are given in the general comparative table presented in the present report (Table No. XVI).[a] It appeared from the returns that about 58 per cent of the deposits of the traders concerned was in checks and other instruments of credit, and that from the investigation 50 per cent is a fair average for the amount of credit paper entering into the transactions of the dealers reporting on the date mentioned.

The investigation of 1894, too, was unsatisfactory, for several reasons. In the first place, returns were asked for only a part of retail trade, expenditures in which constitute about 67 per cent of the total expenses of an average family. In the second, the returns came from the national banks only, and in this respect were defective like all previous reports. Still further, there were no figures in existence to permit a comparison to be made with those obtained. And, finally, the reports were for but one day. For this last reason it was thought they were liable to serious error, because the deposits made by the traders on the day in question probably represented sales made throughout the period of credit common to their community, while the money deposits probably did not include payments for all the cash sales made during that period. Some effort has been made in the present investigation to meet this difficulty.

As a result of these obvious difficulties it seemed best to make another investigation on a much larger scale and with more careful attention to the form of the returns. It was desirable to secure comparative data to test the figures previously obtained, and to take advantage of previous experience in order to eliminate sources of error. These sources of error, as has been noted, came principally from the paucity of the returns, the small industrial field covered by them, and the nonclassification of depositors.

THE PRESENT INQUIRY.

In pursuance of these ideas a circular was sent out asking for the necessary information, in the following form:

"TREASURY DEPARTMENT,
"OFFICE OF THE COMPTROLLER OF THE CURRENCY,
"*Washington, D. C., June 15, 1896.*

"The CASHIER,
"_____ *Bank,*
"_____.

"SIR: In 1894, in response to the special request issued by the Comptroller of the Currency, the national banks made reports to this office showing the extent of the use of credit instruments in retail transactions by their customers, the results being shown in the annual report issued from this Bureau in that year. It is now desired for purposes of comparison, and also to increase the fund of information relative to the use of credit instruments, to extend the scope of inquiry to cover not only retail but wholesale transactions, and as well transactions of other depositors in all banks. With this end in view, I inclose herewith a blank form on which you are requested to state, as of the "settling day" in your community nearest to July 1, the amount and character of deposits made in your bank on the day selected by (1) retail dealers, (2) wholesale dealers, and (3) all other depositors. Your attention is also called to the three inquiries following the statement of deposits with respect to "proportion of checks," etc., "payment of wages by checks," and "time of payment of wages."

"Information is also desired respecting the number of your depositors, total deposits in bank, and all actual cash on hand, classified as indicated, at the close of business on the day selected for this and the statement above called for.

"In order to make the investigation as complete as possible, this request has been sent to every banking institution in the United States—national, State, savings, and private banks, and trust companies. These statistics will be of sufficient value, it is believed,

[a] The data received in 1894 have been gone over again since the publication of the Comptroller's report and certain corrections made. These appear in this table. The general average is only slightly changed.

to warrant urging upon you to aid in making them thoroughly complete.

"In making a request for returns from those who are not conducting banks under the national-bank act, it is hoped the responses will be as general and complete as from those who are connected officially with this office. Such courtesy will be greatly appreciated, and the assurance is given that the publication of the information submitted will be confined entirely to a general summary of the returns. The subject is of wide and general interest and will give an amount of statistical information that will be of benefit to the public.

"As the compilation of these returns will involve considerable time and labor, I trust that you will transmit your report to me as promptly as possible after July 1.

"Very respectfully,

"JAMES H. ECKELS,
"*Comptroller.*"

"_____ BANK,
"_____, *July —, 1896.*

"THE COMPTROLLER OF THE CURRENCY,
"*Washington, D. C.*

"SIR: In compliance with your special request, dated June 15, 1896, I append hereto statements showing (A) the amount and character of deposits made in this bank on July —, (1) by retail dealers, (2) by wholesale dealers, and (3) by all other depositors; and (B) number of depositors, total amount of deposits, and cash on hand, classified as indicated.

(A) *Deposits made in this bank on July —, 1896.*

Depositors.	Deposits.				
	Gold coin.	Silver coin.	Paper currency.	Checks, drafts, orders, etc.	Total.
Retail dealers					
Wholesale dealers					
All other depositors					
Total					

"Q. 1. Does the above statement show about the usual proportion of checks, drafts, etc., to total deposits? If not, please indicate how much it differs therefrom.

"A. 1. _____.

"Q. 2. Is it customary in your community to pay wages by checks?

"A. 2. _____.

"Q. 3. Are wages, as a rule, paid weekly or monthly in your community?

"A. 3. _____.

(B) *Total number of depositors, amount of individual deposits, and cash on hand in this bank on July —, classified as indicated.*

Number of depositors
Total deposits $
Cash on hand, viz:
Gold coin
Gold certificates
Silver, dollars
Silver, fractional
Silver certificates
Treasury notes, 1890
United States notes
Currency certificates
National-bank notes
Total cash

Respectfully, yours,

"_____, *Cashier,*
"_____ *Bank,*
"_____."

It is to be noted that the circular called for deposits, not receipts. Obviously the deposits would be less in volume, as has already been stated, than the receipts, but they would represent more accurately the real business transactions of the country. The circular, it will further be noticed, called also for a classification of depositors into "retail dealers," "wholesale dealers," and "all others," together with the usual classification of the deposits. The date selected was the settlement day nearest the 1st of July. A settlement day was selected for reasons already given. Midsummer was chosen merely as a matter of convenience. Further, the circular asked for certain incidental information. It asked whether the percentage returned was an average one, whether wages were usually paid by checks in the community, and what was the length of the wage period. Information on the two latter points is of considerable value in determining whether or not the percentage of checks returned in any given community is due, to a large extent, to these special causes.

Those who are familiar with statistical investigations need not be told that it is quite impossible to prepare a form so phrased as to preclude the likelihood of misinterpretation, or to secure information so accurate as to cover all possible variations in the conditions that it seeks to investigate. It almost seems as if common words were turned into stumbling blocks by the mere fact of being used in a formal way. It is exceedingly difficult to get uniform interpretation of even very simple questions and terms. The present investigation is no exception to this experience. In interpreting the results obtained we must allow for errors due to various causes of this kind.

In the first place, it is difficult in some cases to draw the line between retail merchants and wholesale merchants. Where, for example, some asked: Shall we class the jobber or the lumber merchant? The answer depends upon the community, the extent of the business, and the point of view. Ordinarily the retail merchant is regarded as one who sells directly to consumers; yet there are many dealers who sell both to consumers and to jobbers. One or two Boston banks were unable to classify the returns of some merchants in Faneuil Hall market for this very reason.

Again, in a bank with a very large number of depositors many of them are personally unknown to the officers of the bank. In such a case a proper classification can not be made. The best that could be done under these circumstances was for the bank to return the statistics of deposits of all who were known to be retail dealers. This was done in some cases. The omissions, however, such as they were, can have no effect of any importance on the average results, for the dealers included were, in all likelihood, representative. Moreover, there can not have been many omissions, for the difficulty arose only in a few of the larger cities.

In the next place, the returns, although more complete than any ever before obtained, are, after all, partial. Of the nearly 13,000 banking institutions of all kinds in the country, 5,700 sent replies, of which 5,530 were available. Of these 3,474 were from national banks and the remainder State and private banks, savings banks, and loan and trust companies.

However, allowance can probably be made for any error due to the partial character of the returns. The results as obtained are tabulated hereinafter. There are three sets of tables of totals. The first set consists (1) of the deposits of retail dealers returned by the national banks in each State and Territory; (2) those of wholesale traders returned by the same banks; (3) the deposits of all the other depositors returned by the same banks; (4) the total deposits of all three classes of customers as returned by the same banks. The second set of tables contains the data, similarly arranged, returned by banks other than national. The third set of tables, also consisting of four, presents the total deposits of each class of dealers as returned by all the banks that made replies.

The returns are presented in this detail for several reasons. First, inasmuch as the returns of the previous investigations came from national banks alone, it is desirable to present by themselves the data now received from them for purposes of comparison. Such a comparison will enable it to be determined how far the allowances made at previous times for omissions now supplied were good. In the next place, the presentation of the tables in so great detail will enable it to be distinguished more clearly the real business transactions from those that are purely speculative; and, finally, it will give some information as to the use of the different classes of banks by the people, and the comparative influence of national and other banks in the business transactions of the country.

The tables are as follows:

TABLE IV.—*Retail deposits of 3,474 national banks, July 1, 1896.*

Wyoming	13	5,095	1,486	6,581	8,020	41,370	55,971	8.8	3	14.3	73.9
Whole country	5,530	1,868,589	1,643,844	3,512,433	19,084,598	280,339,201	302,936,232	.6	.5	6.3	92.5

From the face of the returns the conclusion to be drawn is that 67.4 per cent of the retail trade of the country is transacted by means of credit paper; that 95.3 per cent of the wholesale trade is so carried on; 95.1 per cent of business other than mercantile, and 92.5 per cent of all business.

In retail trade the national banks have 80 per cent of the deposits. The percentage of credit instruments in these deposits varies from 52 in Rhode Island to 87.3 in Nevada.[a] According to the returns of two years ago, South Dakota stood lowest, with 37.6 per cent. It appears from the tables covering retail trade that the per cent of checks shown by the two investigations, in 1894 and 1896, is very nearly the same in Arkansas, Kansas, Maine, Maryland, Montana, and New Mexico, although the percentages for the last two are probably too high; that the present returns give higher percentages for Arizona, California, Colorado, Connecticut, Delaware, Illinois, Indiana, Iowa, Kentucky, Louisiana, Massachusetts, Michigan, Missouri, Minnesota, New Jersey, New York, North Carolina, North Dakota, Ohio, Pennsylvania, South Dakota, Tennessee, Utah, Vermont, West Virginia, Wisconsin, and Wyoming, and that in every case but three—Arizona, Delaware, and Wyoming—the number of banks reporting is much larger than in 1894. There seems to be no sufficient explanation of the higher per cent except that, being deduced from a much larger volume of trade, it is more truly representative.

Indiana and Ohio, whose percentages were clearly abnormal in the returns of 1894, take their obviously proper place now with Illinois, Pennsylvania, and other adjoining States. The per cents in the present tables for Wyoming and Arizona are doubtless abnormally high. The deposits reported from Wyoming are $26,000 less than two years ago, although four more banks sent in replies. The deposits reported from Arizona are in all only $23,000 from five banks, as against $77,000 from four banks two years ago. The percentage this time is less than in 1894 for Alabama, Florida, Georgia, Mississippi, Nebraska, New Hampshire, New Mexico, Rhode Island, Texas, Virginia, and Washington; the returns from New Mexico, with two more banks reporting than there were two years ago, show $7,000 less of deposits, and the percentages in both cases, 83.6 and 80.3, are evidently too high. The other changes all seem to place the States concerned in a more probably correct position. The changes one way and the other have affected the average for the whole country by only 8.9 per cent.

The average per cent of credit instruments in the retail deposits is almost identical for the returns of both sets of banks, despite the great disproportion of the total deposits. The national banks yield an average of 67.9; the other banks, an average of 67.3.

The most remarkable difference in the averages of the two sets of tables are in the cases of California and Idaho. The national-bank average for the former is 76.6 per cent, while the average of other banks is only 42.8 per cent. The difference is in the large amount of gold coin evidently in deposits of other State and private banks. A difference of 30.8 per cent exists in the averages for Idaho, but the larger of the averages is clearly too high on account of being based on too few returns. The averages work out practically the same from the two sets of returns for the States of Illinois, Idaho, Michigan, Nebraska, New York, North Carolina, North Dakota, Ohio, Pennsylvania, and Washington. It seems pretty certain that errors due to too few replies in either class of banks are offset by the fullness of the other set in most cases.

The high per cent in States like Missouri and New Mexico does not necessarily mean that checks are so much more largely used there than, for example, in Massachusetts. It probably shows rather that banks are used by a smaller per cent of the population, but by that part of the people which in any community uses checks most. Tne trade by this part of the population is doubtless much larger in proportion to their number than is that transacted by the rest. Hence the per cent, while too large, is probably not so much too large as at first thought might appear.

There are certain points that need to be cleared up, and certain omissions that must be allowed for, before it is certain that the result obtained is accurate.

In the first place, are the checks deposited by the retail dealers received wholly in payment of purchases made by them? Doubtless not. In communities where wages are paid by check, merchants

[a] The returns from Nevada are so small in the aggregate that they are not a safe basis for inference.

are often called on to cash these checks. In so far as their deposits include checks thus cashed, credit instruments would appear to represent too large a proportion of the business receipts of the depositors. But in most cases probably the checks thus cashed by the merchants are presented by customers who carry accounts with them. The amount owed by the owner of the check to the merchant would be deducted from the amount of the check and the balance turned over to him. It is proper enough, therefore, to regard even such checks as representing to a certain extent payments by credit paper. In so far as the checks cashed by merchants are cashed in full, they would make the proportion of checks in their deposits too large if their deposits are assumed to represent the extent of their trade. All things considered, the error due to this cause is probably too insignificant to deserve notice.

The second point to be considered, and one of more importance on its face, is the question whether the proportion of cash and credit paper in bank deposits may be properly regarded as that which exists in actual payments by customers. This has been denied, on the ground that a business man is likely to use part of the cash he receives in the interval between its receipt and the time of its deposit. The answer to this objection, however, is not difficult. The business man who is accustomed to using checks is as likely to give his check for such a payment as to make the payment in cash; moreover, it seems pretty well established that the cash in a tradesman's till is relatively constant, even allowing for such payments.

The next question to consider is, What allowance should be made for deposits in bank from which no replies were received? The correction due to this failure ought not to be difficult. There is no reason to think that the deposits of banks which did not answer would be any different in character from those of the banks which did answer. It has been asserted that the banks from which no answers come in such investigations are those outside of the large cities, and that the average obtained is therefore too high. The returns do not show this to be wholly true.

Many banks in large places, such as Nashville, Tenn., failed to report. The returns of small State and private banks average about the same as others. Even if the assertion were true, however, allowance could be made for the partial nature of the returns by adding for the banks not replying amounts in the proportion of their number to the total number of banks in country districts. As has been said, the total number of banking institutions to which blanks were sent is about 13,000; of the replies received, 5,530 were used. If the banks of the reserve cities are thrown out there will be left 5,005. This is 60 per cent of the whole number of banks outside of those cities; therefore 40 per cent of the country banks did not reply. If to the total deposits reported from the country outside of these cities is added 40 per cent for the nonreplying banks, the aggregate would be $22,600,000. The amount of checks, similarly increased, is $14,000,000. The resulting percentage of checks is 62. This is a variation of only 5.4 per cent from that obtained from the banks actually reporting.

Still further must be considered carefully the question whether the bank deposits are representative of the medium of payment used by all industrial classes. It is certainly true that there are very many people who do not use banks at all. The total number of depositors in the banks from which replies have been received is 5,929,963.[a] How many of these are individuals not in business at all, how many are men of trade, retail or wholesale, and how many are corporations, it is, of course, impossible to say; and of the individuals who are in trade there is no means of ascertaining to a certainty how many carry on their business without receiving checks at all. It is probably true that all industrial classes whose annual income is below $500 or $600 do not use checks to any extent, though this number is being daily lessened by the increased use by them of savings banks. There are four classes of the population who, it has been urged, should be included among the noncheck users, whose trade would materially lower the percentage deduced from the bank returns. They are the negro population in the South, portions of the foreign population in our large cities, all other wage earners of small income, and farmers.

To consider these classes in detail: The nonuse of checks by the negroes is undoubtedly offset to a large extent by the use of store orders and by direct barter. These store orders are used to a considerable extent in the payment of wages in the mining and country districts, especially throughout the South. Moreover, a considerable amount of the commodities consumed by these people is raised on their own plats of ground directly for their own consumption. That portion of their living which is thus supplied creates no additional demand for a medium of exchange. It would not be fair, therefore, to count the total value of the expenditure of the noncheck-using negroes on the side of cash in determining the percentage of credit instruments used in payments in retail trade; for the ultimate question under investigation in this and similar discussions is: What per cent of the demand for a medium of exchange is supplied by credit instruments? Obviously, products which are exchanged by direct barter, or are consumed by their producers, do not enter into the amount of this demand.

As to the second class, the foreign population, it is doubtless true that the suggestion made may apply to such portions of them as have not been used in their home countries to the deposit feature in banking, and therefore unacquainted with payments made by checks. In so far as they are located in the city, their trade would tend to lower the per cent of credit paper. How much it is impossible to say, but certainly not in proportion to their number, because until the commencement of the use of checks by this class the amount of their individual income is usually small, and their number, moreover, is comparatively small. Some data illustrating their habits in the matter of the use of checks are given below in another direction.

These remarks apply also to the third class, the native white wage-earners of small income, somewhat modified, however, by the extent to which checks are used in paying wages. Owing to the probably greater intelligence of this class, to the educational influence of the system of paying wages by check, and to the general character of the individuals in the class, the percentage of checks used is undoubtedly higher than is the case in the second class considered. There is some evidence to show this in some of the detailed accounts of specific places given below, especially as shown in the report from New Brunswick, N. J.

As to the farmers, it is not at all an uncommon supposition that they do not use checks to any considerable extent. This, however, can not by any means be taken for granted. It is learned from bankers, in the East and middle west especially, that checks are used by farmers in making payments to a larger extent than cash. In one town of importance in central Illinois it has happened that in a business of fully $20,000 in one day, carried on with farmers mostly, it was not necessary to open the safe of the bank to take out money at all. In another case it was found that a business of $20,000 by a bank is done on the average with not more than $500 in the till. In running through the balances shown by the books of this particular bank for a considerable period it was shown that the extreme variation of the money in the till was $2,500 for a total business aggregating several hundred thousands. Information received from other sections of the country point to the existence of a similar state of affairs.

There are still other considerations which render it by no means a foregone conclusion that the trade of farmers is carried on to only a small extent by means of checks. With them also, as with other classes mentioned, if the need for checks is small, so, too, especially in the case of the multitude of "small farmers" is the need for money. "Small farmers" produce largely for their own consumption. The influence of the trade of the farmers in swelling the money side of the account is offset by this fact. Still again, a great deal of the farmer's trade in certain sections is done by direct barter. This of course tends to decrease as the country becomes more thickly settled. In the East it probably has practically died out, but it has not done so in very many places in the West and South. The report from New Brunswick, N. J., states: "Time was, and only recently, when farmers had long-standing accounts with the merchants. Now the merchant makes his purchases and pays for them, in most cases, at once. Farmers were formerly accustomed to trade out their produce. Now they receive payment for it and deal with whom they choose."

Upon this same subject reports from many sources show that the habit of paying with checks on the part of farmers is growing, though in all parts of the country not an inconsiderable part of trading on account is still carried on. Farmers are credited on the books of the dealers with the produce which they bring in, and secure their supplies on the basis of this credit. In a single grocery store in the city of Urbana, Ill., it is developed by the report that there are 73 such running accounts, and there are four or five similar stores in the city. All these would reduce the proportion of cash trade and make the percentage of payments in cash smaller.

The fair conclusion from a consideration of all these facts is that not the whole of the trade which is not shown in bank returns can be properly credited to the money side of the account in determining the proportion of checks used in trade; in other words, that the percentage of credit instruments used in retail trade, as shown by the accounts of those tradesmen who use banks, is not larger than the actual percentage by the entire proportion of the trade of those who are not bank users.

Table No. XV shows the grand total results. According to this the per cent of business done by checks, all classes being included, is 92.5. New York State leads the list, with 96.4 per cent. Closely following come Massachusetts and Maryland, with 93.2 and 93.3, respectively, and Nevada and Minnesota, with 92.3 and 92.5.

[a] Omitting, in the case of most of the commercial banks, certificate deposits.

Missouri has 90.7; New Mexico, 90.8. The lowest percentage shown is that of California, 69.4. If the present percentages are compared with those gotten from the total receipts accounted for in the investigation of 1892, we find that, leaving out the reserve cities, they are nearly the same at both times for New Hampshire, Delaware, New York, New Jersey, Pennsylvania, Florida, Indiana, Iowa, Kansas, Michigan, Minnesota, Wisconsin, North Carolina, and Virginia. They are higher for the District of Columbia, Maryland, Louisiana, Mississippi, Missouri, Illinois, Nebraska, Utah, and Idaho.

ULTIMATE CONCLUSION.

What conclusion is finally to be reached as to the true proportion of the demand for an exchange medium which is met by the use of credit instruments? First, the returns for mercantile business must be considered. The average per cent of retail trade transacted by means of credit instruments, it is seen, is 67, according to the face of the returns; that 40 per cent is as low as could in reason be claimed to be correct, and that 55 per cent is, all things considered, probably about accurate.

There seems no reason to think that the per cent of checks shown by the returns for wholesale payments needs to be diminished by any allowances. That per cent is 95. If the returns for retail and wholesale business are combined, 87 is had as the average per cent of the deposits of the merchants of both classes in the form of credit instruments. If the retail business is taken at 40, and weights the per cents of the two classes of trade according to their total returns, we get 79 as the average per cent. If the retail average is taken at 55, the similarly weighted average for both kinds of business is 83. If each kind of business is regarded as of equal importance, the averages are: With retail trade at 40 per cent, 68; with retail trade at 55 per cent, 75.

It is therefore not unreasonable to assume that 75 is a net figure at which to rest as the per cent of both retail and wholesale business which is done by credit-paper exchange.

What influence should the third class of check users have in determining the final proportion of credit instruments in the exchange medium? Some writers argue that the checks due to speculative transactions should be ruled out of the count. "If all these receipts represented legitimate business," wrote the Comptroller in 1881, "the means for merchandising and manufacturing would be most abundant." Speculative transactions occur in the business of wholesale dealers; but the speculation which it is claimed should be thrown out of the calculation is, perhaps, transactions in stocks. The payments, however, for stock transactions can not be regarded otherwise than as constituting a real part of the demand for an exchange medium, and so influence the amount needed; speculative transactions of other kinds exert an influence on prices, and also influence that demand.

The real question of importance is as to the per cent of the total currency demand which is satisfied by means of credit instruments. It would seem, therefore, that in seeking to determine what amount or per cent of money of account is dispensed with because of the use of credit instruments the means of payment in speculative transactions may not be ignored, even when they are purely stock speculations. If, however, they are thrown out, what is left? The Comptroller, in 1881, estimated that of the $165,000,000 checks and drafts received by the banks of New York City on September 17 of that year, three-sevenths represented stock transactions. If even one-half of the total transactions of "all other" depositors, as representing speculations in stocks, is deducted and assume that they are all paid for by checks, $200,000,000 is left for the total business deposits, of which $180,000,000 was in checks. This is 90 per cent.

Heretofore in this report it has been assumed that the figures obtained from retail trade are within $9,000,000 of the total retail business for the day, and that the checks used in performing this business formed about 53 per cent of the whole medium of payment. It has been estimated that the total amount of checks passing through the New York clearing house is about 70 per cent of the whole number drawn. Of course the percentage will be much lower for the country as a whole. If it is assumed that it is 30 per cent for the country as a whole, and there are added to the figures returned by the banks for the various kinds of deposits amounts representing 30 per cent of the returns in checks, after rejecting $100,000,000 for stock transactions, 85 per cent is left as a result. This is probably not far out of the way as representing the per cent of the business of the country which is paid for by means of checks, drafts, and other credit instruments. This method, of course, is arbitrary, but is probably as reliable as any other that could be assumed.

It may safely be concluded, therefore, that at least 80 per cent is a reasonable estimate from all the data presented.

The subject may be looked at in still another way. If it is assumed that the volume of business is constant for a brief period, and if it is supposed that this volume may be taken to represent the total money demand, then the amount of the medium of exchange necessary for the country would be approximately the sum of these quantities: The amount of money actually used to make exchanges in a given period, as a week, divided by the velocity of circulation; the amount of credit instruments used in payments in the same period, divided by their velocity of circulation; the amount of money needed as a reserve for the credit operations. Each one of these is very difficult to determine. The question of the velocity of circulation, especially, is a problem on which there is very little definite information. If, however, satisfactory information were available it would now be less difficult to deal with the "quantity of money" question than ever before.

The general result of this discussion is very strongly to emphasize the importance of the part played by credit instruments of exchange in the economy of the country. It bears out the statement made as a result of the investigation of 1894, as follows:

"The advocates of a large volume of money, not inherently sound money, have used their belief to offset the statement that credit is a more determining cause of prices in modern business than money. The results of the present inquiry, however, are on the whole in the line of the former conclusions as to the importance of credit instruments in payments and exchanges generally, and against the necessity of any additional provisions for simply an increase in the volume of money without taking into consideration the other and more important elements which should characterize our monetary circulation."

APPENDIX R.

The Greenback in Congress.

INTRODUCTION.

In 1861 the Government of the United States faced a great and costly war, with impaired credit and imperfect administrative machinery. The country was divided against itself; the national finances were drifting toward an abyss of deficit and default; a system of State banks, often based upon neither property nor true credit, interfered with any general plan of currency reform; the State bank notes could not be received into the Treasury of the United States, and before the end of the year the banks in the great cities had paid to the Government $150,000,000 in coin (gold), being a great part of their holdings. It was doubted if any further loans could be negotiated with success or advantage to the Government. Nearly $200,000,000 had been borrowed since July, but the loans were the only immediate means of obtaining revenue. The customs were unproductive, and there was no system of internal taxes.

Mr. Chase, the Secretary of the Treasury, submitted his report to Congress in December, 1861. He recommended taxes to produce an income of $100,000,000 a year—a sum large enough in his eyes to require an apology; and further loans, among which was to be a loan without interest from the people. To accomplish this he proposed a Government control over bank issues.

"It has been well questioned by the most eminent statesmen whether a currency of bank notes, issued by local institutions under State laws, is not in fact prohibited by the national Constitution. Such emissions certainly fall within the spirit, if not within the letter, of the constitutional prohibition of the emission of bills of credit by the States, and of the making by them of anything except gold and silver coin a legal tender in payment of debts.

"However this may be, it is too clear to be reasonably disputed that Congress, under its constitutional powers to lay taxes, to regulate commerce, and to regulate the value of coin, possesses ample authority to control the credit circulation which enters so largely into the transactions of commerce and affects in so many ways the value of coin." (Report for 1861, p. 17.)

Two plans for accomplishing the result were laid before Congress by the Secretary: (1) To retire State bank issues by taxing them, and substitute for them United States notes, payable in coin. The advantages would be a loan to the Government without interest and a uniform currency for the people.

"The plan, however, is not without serious inconveniences and hazards. The temptation, especially great in times of pressure and danger, to issue notes without adequate provision for redemption; the ever-present liability to be called on for redemption beyond means, however carefully provided and managed; the hazard of panics, precipitating demands for coin, concentrated on a few points and a single fund; the risk of a depreciated, depreciating, and finally worthless paper money; the immeasurable evils of dishonored public faith and national bankruptcy; all these are possible consequences of the adoption of a system of Government circulation. It may be said, and perhaps truly, that they are less deplorable than those of an irredeemable bank circulation. Without entering into that comparison, the Secretary contents himself with observing that, in his judgment, these possible disasters so far outweigh the probable benefits of the plan

that he feels himself constrained to forbear recommending its adoption."—(Report for 1861, p. 18.)

The second plan was a circulation, based on United States bonds, or an adequate provision of specie, but issued by associations or institutions which must be responsible for its redemption—the outline of what later became the national-bank system.

It will be seen that Mr. Chase deliberately put aside a Government issue of irredeemable notes, and threw his influence in favor of a national banking system, with notes issued under the control of that system. To this view he had come before the report was prepared. Before his recommendations could be acted upon in Congress the banks throughout the country suspended specie payments (December 28), gold went to a premium of 2 to 4 per cent, and the Treasury could no longer count upon coin or notes convertible into coin.

Meanwhile his report had been referred in the House of Representatives to the Committee of Ways and Means, composed of the following members: Thaddeus Stevens, of Pennsylvania, chairman; Justin S. Morrill, of Vermont; John S. Phelps, of Missouri; Elbridge G. Spaulding, of New York; Erastus Corning, of New York; John L. N. Stratton, of New York; Valentine B. Horton, of Ohio; Samuel Hooper, of Massachusetts, and Horace Maynard, of Tennessee. The subcommittee named to consider the subject of loans, currency, and bank scheme were Spaulding, Hooper, and Corning. Under the plea of necessity Spaulding drew a section of a bill providing for an issue of $50,000,000 in Treasury demand notes, to be a "legal tender in payment of all debts, public and private," but afterwards made it an independent measure, and in that form it was laid before the full committee. Morrill, Horton, and Corning were strongly opposed to it. Hooper was active in its favor, and Stevens, after some misgivings, gave it support. Phelps was absent, and the remaining two members were neutral. To support his measure Spaulding obtained from the Attorney-General a colorless opinion, which merely stated that the Constitution had no express prohibition of a legal-tender function, nor in his opinion did it contain an "inferential or argumentative prohibition." A change of one vote—that of Stratton—gave the bill a majority in its favor, and it was reported to the House on January 7—a measure of the Ways and Means Committee, not of the Treasury.

THE FIRST LEGAL TENDER ACT.

On January 7, 1862, Mr. Spalding reported a bill from the Committee on Ways and Means authorizing the issue of $100,000,000 of demand Treasury notes. The bill was read a first and second time by its title, referred to the Committee of the Whole on the state of the Union and ordered to be printed. On the following day, January 8, Mr. William A. Richardson, a Representative from Illinois, introduced the following resolution, which was read, considered, and agreed to:

"*Resolved*, That the Committee on the Judiciary be instructed to inquire into the power of Congress, under the Constitution, to make Treasury notes payable on demand a legal tender, and that they report the result of such inquiry at the earliest practicable day."

The Treasury note measure remained in the Committee on Ways and Means until January 22, when the chairman reported as a substitute a bill authorizing the issue of Treasury notes, and for the redemption or funding thereof, and for funding the floating debt of the United States. On January 28 the debate opened in Committee of the Whole on the state of the Union. The section of the bill relating to the issue of notes was as follows:

"*Be it enacted by the Senate and House of Representatives of the United States of America in Congress assembled*, That, for temporary purposes, the Secretary of the Treasury be, and he is hereby, authorized to issue, on the credit of the United States, $100,000,000 of United States notes, not bearing interest, payable to bearer at the Treasury of the United States, or at the office of the Assistant Treasurer in the city of New York, at the pleasure of the United States, and of such denominations as he may deem expedient, not less than five dollars each; and such notes, and all other United States notes, payable on demand, not bearing interest, heretofore authorized, shall be receivable for all debts and demands due to the United States, and for all salaries, debts and demands owing by the United States to individuals, corporations, and associations within the United States; and shall also be lawful money and a legal tender in payment of all debts, public and private, within the United States; and any holder of said United States notes depositing any sum not less than fifty dollars, or other than a multiple of fifty, with the Treasurer of the United States, or either of the assistant treasurers, or either of the designated depositories at Cincinnati, or Baltimore, shall receive in exchange therefor duplicate certificates of deposit, one of which may be transmitted to the Secretary of the Treasury, who shall thereupon issue to the holder an equal amount in bonds of the United States, coupon or registered, as may be desired, bearing interest at the rate of six per cent, and redeemable at the pleasure of the Government after twenty years from date, or in sums not less than $2,500, for which, if requested, the Secretary, if he deem it expedient, may issue similar bonds, the principal and interest of which may be expressed in the currency of any foreign country, and payable there. And such United States notes shall be received the same as coin, at their par value, in payment for any bonds that may be hereafter negotiated by the Secretary of the Treasury, and may be reissued from time to time, as the exigencies of the public service may require. There shall be printed on the back of the United States notes, which may be issued under the provisions of this act, the following words: 'The within note is a legal tender in payment of all debts, public and private, and is exchangeable for bonds of the United States bearing six per cent interest.'"

DEBATE IN THE HOUSE OF REPRESENTATIVES.

[Speech of E. G. Spaulding, of New York.]

A MEASURE OF NECESSITY.

Our finances deserve our most serious consideration. The ways and means of carrying on the war should enlist the grave consideration of every gentleman on this floor who desires the preservation of this Government. We were never in greater peril than at this moment. It will require all our best energies to successfully meet the crisis through which we are passing. I am oppressed with the magnitude of the work before us. But I will not, I dare not—I trust we shall not any of us—shrink from the responsibility of performing every duty devolved upon us in this great crisis of our national affairs.

The bill before us is a war measure—a measure of necessity, and not a choice, presented by the Committee of Ways and Means, to meet the most pressing demands upon the Treasury, to sustain the Army and Navy until they can make a vigorous advance upon the traitors and crush out the rebellion. These are extraordinary times, and extraordinary measures must be resorted to in order to save our Government and preserve our nationality. * * * The bill is simple and perspicuous in its terms, and easy of execution. It is a Government measure, and the officers of Government are required to execute its provisions.

By the time the Secretary of the Treasury can get these notes engraved, printed, and signed ready for use, all other available means at his command and in the Treasury will be exhausted. This measure is therefore presented under the highest prerogatives of Government. The army and navy now in service must be paid. They must be supplied with food, clothing, arms, ammunition, and all other material of war, to render them effective in maintaining the Government and putting down the rebellion. Having exhaused other means of sustaining the Government, this measure is brought forward as the best that can be devised, in the present exigency, to relieve the necessities of the Treasury, and I trust it will pass without delay. * * *

The duties received at the different custom-houses, and the taxes levied at the extra session, or that may now be levied, will be wholly inadequate to meet the requirements of the Treasury in the present emergency during the next six months. If you can not borrow the money on the credit of the United States except at ruinous rates of discount, and can not make the new banking system available in time, and can not realize the amount required from your tariff and tax bills, in what mode can the means be obtained and the Government be carried on? It is believed that the only way in which it can be done is by issuing Treasury notes, payable on demand, and making them legal tender in payment of all debts, public and private, and by adequate taxation to be imposed by new bills. This will bring into full exercise all the higher powers of Government under the Constitution. * * *

The power in the Constitution to "lay and collect taxes, duties, imposts, and excises" is general and unlimited. Congress has the power to levy and collect any amount of taxes that may be necessary to preserve its existence and pay all its debts. Government has a claim—a mortgage, in fact—on all this property to that extent. Will Congress do its duty by passing bills to collect these taxes? This is the vital question. Will Congress have the firmness and the courage to impose the necessary taxation to sustain the credit of the Government? Direct taxation, excises, and internal duties are new features within the United States. They will be heavy burdens on the people, but essential to sustain the circulation of demand Treasury notes. * * *

This bill is a necessary means of carrying into execution the powers granted in the Constitution "to raise and support armies," and "to provide and maintain a navy."

THE CONSTITUTIONAL POWER.

The Constitution provides that "all the laws necessary and proper for carrying into execution the foregoing powers" may be passed by Congress.

If the end be legitimate, and within the scope of the Constitution, all the means that are appropriate, which are plainly

adapted to that end, and which are not prohibited, may be constitutionally employed to carry it into effect.

If a certain means to be exercised of any of the powers expressly given by the Constitution through the government of the Union be an appropriate measure, not prohibited by the Constitution, the degree of its necessity is a question of legislative discretion, not of judicial cognizance.

The Government of the United States is not prohibited by the Constitution from issuing Treasury notes on demand and making them a legal tender in payment of all debts within its jurisdiction. The Constitution (Article I, section 10) prohibits the States from making anything but gold and silver coin a legal tender in payment of debts; but this does not at all restrict the sovereign power of the United States. Congress has the power to coin money, "regulate the value thereof, and of foreign coin." Gold and silver by long practice—a practice that has continued for centuries among all nations—has become the legal money of the world in all commercial transactions. Its real intrinsic value is not as great as that fixed upon it by governments. All governments fix the value of gold and silver, and without their government stamp gold and silver would be a simple commodity, like other things having intrinsic value. Some governments fix the value of coin higher, and some lower, just as each for itself chooses to determine. Any other metal or thing that should be stamped and its value regulated by all the governments of the world, would pass equally well in all commercial transactions with gold and silver, although not intrinsically as valuable. Exchequer bills or treasury notes, whose value is fixed by government and stamped as money, would pass as money in payment of debts within the jurisdiction of the government fixing such value.

In regulating the value of "coin"—either foreign or domestic—Congress may provide that gold and silver shall be of no greater value in the payment of debts within the United States than the Treasury notes issued on the credit of this Government, which stamps such coin and fixes its value. These high powers of government have been frequently exercised by Great Britain during her continental wars in making the Bank of England notes receivable for public dues, and virtually in payment of debts, by a suspension of specie payments within the United Kingdom; and other governments of Europe have exercised the same high prerogatives whenever necessary to preserve their existence. But we are not left to this argument alone for constitutional power to issue these demand notes and make them a legal tender in payment of debts, as I will endeavor hereafter to show. * * * The Constitution provides that Congress shall have power to pass "all laws necessary and proper" for carrying into execution all the powers granted to the Government of the United States or any department or officer thereof.

The word "necessary," as used, is not limited by the additional word "proper," but enlarged thereby. * * * Congress may judge of the necessity in the present exigency. It may decide whether it will authorize the Secretary of the Treasury to issue demand Treasury notes, and make them a legal tender in payment of debts, or whether it will put its 6 or 7 per cent bonds on the market at various rates of discount, and raise the money at any sacrifice the money lender may require to meet the pressing demands upon the Treasury. In the one case the Government will be able to pay its debts at fair rates of interest; in the other it must go into the streets shinning for the means, like an individual in failing circumstances, and sure of being used up in the end by the avarice of those who may exact unreasonable terms. The Government needs, and should have in its present peril, the aid and protection of all patriotic citizens.

WHAT SHOULD BE DONE.

But, sir, knowing the power of money, and the disposition there is among men to use it for the acquisition of greater gain, I am unwilling that this Government, with all its immense power and resources, should be left in the hands of any class of men, bankers or money lenders, however respectable and patriotic they may be. The Government is much stronger than any of them. Its capital is much greater. It has control of the bankers' money, and all the brokers' money, and all the property of the thirty millions of people under its jurisdiction. Why, then, should it go into Wall street and State street, Chestnut street, or any other street, begging for money? Their money is not as secure as Government money. All the gold they possess would not carry on the Government for ninety days. They issue only promises to pay, which, if Congress does its duty, are not half as secure as United States Treasury notes based on adequate taxation upon all the property of the country.

Why, then, go into the streets at all to borrow money? I am opposed, in our present extremity, to all shifts of this kind. I prefer to assert the power and dignity of the Government by the issue of its own notes, pledging the faith, the honor, and the property of the whole loyal people of the country to maintain their circulation and provide for their redemption. * * * It is plainly within the scope of the Constitution that the Government should maintain itself, that the Army should be supported, that the Navy should be maintained. The ways and means of doing this are left to Congress to provide. Congress may do this entirely by taxation. It may provide by law to levy and collect taxes enough every year to pay the whole expenses of the war during each current year, and so "pay as we go." It may issue 6 per cent bonds and sell them on the market for what they will bring—even if they will not sell for over 50 cents on the dollar—to raise money to carry on the war.

It may issue Treasury notes, payable on demand, and make them a legal tender in payment of debts. Either one or all of these modes of paying the expenses of the Government is left to the discretion of Congress. Either mode is constitutional, and it is left to the sound discretion of Congress to decide which mode it will adopt, or whether it will adopt a part of each as being the best in the present crisis. * * * Our Army and Navy must have what is far more valuable to them than gold and silver. They must have food, clothing, and the material of war. Treasury notes issued by the Government, on the faith of the whole people, will purchase these indispensable articles, and the war can be prosecuted until we can enforce obedience to the Constitution and laws, and an honorable peace be thereby secured. This being accomplished, I will be among the first to agitate a speedy return to specie payments, and all measures that are calculated to preserve the honor and dignity of the Government in time of peace.

[George H. Pendleton, of Ohio, January 29, 1862.]

A NOVEL MEASURE.

I have examined, Mr. Chairman, with some care, every law authorizing the issue of Treasury notes which has been passed from the foundation of the Government up to this hour, and I find that this bill differs from all of them in several essential particulars. Every other law authorizing the issue of Treasury notes provided that they should bear some rate of interest, whereas these are to bear none; that they should be payable at a fit time prescribed in the note, whereas these are only to be payable at the pleasure of the United States; that the notes thereby authorized should be receivable in payment of public debts only by those who were willing to receive them at par, while these notes are to be received by every public creditor who is not willing to forfeit his right to payment at all. These notes are to be made lawful money, and a legal tender in discharge of all pecuniary obligations, either by the Government or by individuals, a characteristic which has never been given to any note of the United States or any note of the Bank of the United States by any law ever passed. Not only was such a law never passed, but such a law was never voted on, never proposed, never introduced, never recommended by any department of the Government; the measure was never seriously entertained in debate in either branch of Congress.

The report of the Secretary of the Treasury, made at the opening of the session, contains no such recommendation. It is obvious from the comparison which I have drawn between the bill before us and the laws heretofore passed that if this bill shall pass we are about to take a departure from the settled financial policy of the Government. We are about to launch ourselves, with sails all set, upon an ocean of experiment, upon which the wise man who administered the Government before we came into power, warned by the example of other nations, would not permit it even to enter. I believe that this Government has reached a crisis in its history. I believe that it is approaching a period in the history of its legislation which may determine the question of its continuance. By wisdom it may overcome the evils of secession; by its great powers and resources it may be able to defend itself against those in arms against it; but I firmly believe that it can not maintain itself against the shock of the accumulated and manifold dangers which follow inevitably closely in the wake of an illegal, unsound, and depreciated Government paper currency.

The feature of this bill which first strikes every thinking man, even in these days of novelties, is the proposition that these notes shall be made a legal tender in discharge of all pecuniary obligations, as well those which had accrued in virtue of contracts already made as those which are yet to accrue in pursuance of contracts which shall hereafter be made. Do gentlemen appreciate the full import and meaning of that clause? Do they realize the full extent to which it will carry them? Every contract for the payment of money is in legal contemplation a contract for the payment of gold and silver coin. Every promissory note, every bill of exchange, every lease reserving rent, every loan of money reserving interest, every bond issued by this Government, is a contract to which the faith of the obligor is pledged that the amount, whether rent, interest, or principal, shall be paid in the gold and silver coin of the country. Every contract for the performance of some other thing than the payment of money carries with it,

as the penalty of its infraction, that damages shall be assessed, and that these damages shall be paid, even if necessary at the end of an execution, in the gold and silver coin of the country. Every verdict which has been rendered, every judgment which has been entered up, every decree for the payment of money has been made upon that hypothesis. That is the measure of the obligation of the one party and of the right of the other.

The provisions of this bill contemplate impairing the obligation of every contract of that kind, and disturbing the basis upon which every judgment and decree and verdict has been entered. It proposes to say to a party who has entered into a contract, "You shall be discharged from the obligations of that contract by doing something else than that which you have agreed to do." It proposes to say to every party with whom a contract has been made, "Though you are entitled to demand one thing, you shall, perforce, remain satisfied with the doing of another." It proposes to say, "Although you have agreed to pay gold and silver you shall be discharged upon the payment of these notes; although you are entitled to demand gold and silver, you shall rest content with the reception of this paper." It proposes, in one word, to release the one party from the obligation of its contract, and to divest the other party of the right which has been vested in him by that contract. I am sure I need only state the proposition to shock the minds of the legal profession of the country, so thoroughly has it been imbued with the idea of the sanctity of the obligation of contract by those who have taught it the beneficent maxims of constitutional law. * * *

NO CONSTITUTIONAL SUPPORT OF THIS POWER.

A power whose extent was so great as this was worthy to find a place in the express grants of the Constitution. I had expected to hear the gentleman from New York [Mr. Spaulding], in his argument upon this subject yesterday, derive this power from the power to "coin money." I am glad he did not, for I think that no stress of financial difficulties could excite the honest imagination of any gentleman, even though upon the Committee of Ways and Means, to such a degree that he could, even in its wildest flights, fancy this power involved in those words. I expected to hear him derive it from the power "to regulate commerce;" in this I was agreeably disappointed. I know that clause is the stalking-horse which is made to carry almost every conceivable power which any gentleman has thought it desirable at any time that Congress should exercise; and yet I know that Mr. Webster, who attributed to the Government of the United States more power by reason of that clause than any other American statesman of whom I have any knowledge, expressly and upon divers occasions scouted the idea that by virtue of it, or of any other clause in the Constitution, such power was given. I know it is extremely difficult to define with exactitude all the powers which Congress may have by virtue of that provision; but I think it might be left to any fair-minded man to say whether a law, which provides that a certain note issued by the Treasury of the United States shall be a legal tender in discharge of debts already accrued, is a fair and legitimate exercise of a power to regulate the interchange of commodities, and their barter and sale.

The gentleman from New York [Mr. Spaulding], in his argument yesterday, deduced this power from the general powers of the Government. He told us that Congress had power to lay and collect taxes; to raise and support armies; to provide and maintain a navy, and that all power necessary to effectuate these purposes was expressly given by the general grant of the Constitution. If I should admit his statement in the very language in which he has made it, am I not entitled to ask whether he has shown us any legitimate connection between making these notes a legal-tender and the power to raise an army? Might I not ask whether the repudiation of the obligations of the Government to pay its interest is a legitimate means for providing and sustaining a navy? Whether impairing the obligations of contracts between private individuals throughout the country will, in any degree, assist the Government in its great duty of laying and collecting taxes? We had no demonstration of the necessity or propriety of these means to accomplish those ends.

The gentleman spoke quite at large in reference to the sovereign power of the Government. He told us that this power was not prohibited in the Constitution. He told us that in times of great emergency everything may be done except that which is prohibited; and he read an argument from the Attorney-General which concludes as it began, with the proposition that such a power is not prohibited to Congress. I repudiate this whole idea. I think it has no solid foundation in the Constitution. In all its external relations, standing among the nations of the earth, the Government of the United States is sovereign and is invested with all the attributes of sovereignty; but in its relations to its own citizens, in its relations to the States, in its relations to its own constituents, it has no power except that which is granted. It has no original power; its powers are all delegated, and delegated by the terms of the Constitution itself. I repudiate the idea that all the sovereign power which rightfully resides in the nation must necessarily find expression in any department of the Government, whether it be National or State.

I stand upon the provision of the Constitution that all power which is not delegated to the Federal Government is reserved from it, and that all power which is not delegated to it, and thereby reserved from it, resides either in the States or in the people. There are many powers which are denied by the Constitution to the States and yet not delegated to the General Government. They find their proper repository in the people. * * * When I come to examine the powers of Congress, according to the principles of interpretation to which I have said I adhere, I look to the grants of the Constitution. I find no grant of this power in direct terms, or, as I think, by fair implication. It is not an accidental omission; it is not an omission through inadvertency; it was intentionally left out of the Constitution, because it was designed that the power should not reside in the Federal Government. * * * It seems to me that if the language of the Constitution and the weight of authority can settle any proposition, it is that Congress has not the power to do that which it is proposed shall be done by the provisions of this bill.

* * * * * * *

[At this stage of the debate a letter was read from the Secretary of the Treasury urging immediate action on the subject of affording provisions for the expenditures of the Government, containing the following paragraph:]

"The provision making United States notes a legal tender has doubtless been well considered by the committee, and their conclusion needs no support from any observation of mine. I think it my duty, however, to say, that in respect to this provision my reflections have conducted me to the same conclusions they have reached. It is not unknown to them that I have felt, nor do I wish to conceal that I now feel, a great aversion to making anything but coin a legal tender in payment of debts. It has been my anxious wish to avoid the necessity of such legislation. It is, however, at present impossible, in consequence of the large expenditures entailed by the war, and the suspension of the banks, to procure sufficient coin for disbursement; and it has, therefore, become indispensably necessary that we should resort to the issue of United States notes.

"The making them a legal tender might, however, still be avoided if the willingness manifested by the people generally, by the railroad companies, and by the banking institutions, to receive and pay them as money in all transactions were absolutely or practically universal; but, unfortunately, there are some persons and some institutions which refuse to receive and pay them, and whose action tends not merely to the unnecessary depreciation of the notes, but to establish discriminations in business against those who, in this matter, give a cordial support to the Government, and in favor of those who do not. Such discriminations should, if possible, be prevented; and the provision making the notes a legal tender, in a great measure at least, prevents it by putting all citizens in this respect on the same level, both of rights and duties.

"The committee doubtless feel the necessity of accompanying this measure by legislation necessary to secure the highest credit as well as the largest currency of these notes. This security can be found, in my judgment, by proper provisions for funding them in interest-bearing bonds, by well-guarded legislation authorizing banking institutions with circulation based on the bonds in which the notes are funded, and by a judicious system of adequate taxation which will not only create a demand for the notes, but—by securing the prompt payment of interest—raise and sustain the credit of the bonds. Such legislation, it may be hoped, will divest the legal-tender clause of the bill of injurious tendencies, and secure the earliest possible return to a sound currency of coin and promptly convertible notes." * * *

To Mr. Spaulding the Secretary wrote, on February 3:

"I came with reluctance to the conclusion that the legal-tender clause is a necessity; but I come to it decidedly and support it earnestly. I do not hesitate since I have made up my mind. * * * The conclusion I have arrived at has convinced me that it is important to the success of the measure,"

[Justin S. Morrill, of Vermont—February 4, 1862.]

The subject of issuing $150,000,000 of paper currency and making it a legal tender by the Government at a single bound—the precursor, as I fear, of a prolific brood of promises, no one of which is to be redeemed in the constitutional standard of the country—could not but arrest my attention, and having strong convictions of the impolicy of the measure, I should feel that I utterly failed to discharge my duty if I did not attempt to find a stronger prop for our country to lean upon than this bill—a measure not blessed by one sound precedent and damned by all. * * *

If this paper money is a war measure, it is not waged against

the enemy, but one that may well make him grin with delight. I would as soon provide Chinese wooden guns for the Army as paper money alone for the Treasury.

What is it that we most need? Clearly we lack money and wish to inspire our own people with that confidence that will induce them to lend the requisite amount. But the very first step we propose is one to destroy whatever of confidence yet remains among those who have a dollar to lend. We proclaim by an engraved advertisement—to be forced into the pockets of every man by the fiat of the Government—that we will hereafter liquidate all our debts with paper only. With such a stamp on our foreheads it can not be expected that we shall find either patriotism or selfishness hereafter prompting anybody to volunteer to take a single bond more of the United States. Some unhappy contractor may be caught and forced to accept in payment of existing debts the illstarred notes and bonds to be disposed of as fancy stocks for the most they will bring. But profiting by experience, no contractor will be caught the second time without securing an ample margin to enable him to deal at last with the Jews on the Rialto. When the bonds of the same Government can be had, with same rate of interest and the same time to run, for less than 90 cents on the dollar and be paid for in bank paper worth 3½ per cent less than par, it requires a stretch of the imagination to see anybody walking up to our worthy Secretary of the Treasury and tendering 100 cents on the dollar for just the same thing. * * *

It is pretended that as the whole United States are holden for the redemption of these notes they must be good, and will, therefore, pass at par, especially if made a legal tender. Never was a greater fallacy. The United States are abundantly able to meet all the vast exigencies of this war, to pay all liabilities, only put them into the proper form. It can not be done on demand, and it is a fiction to pretend to do so. They must be funded until the means can be accumulated for their redemption. As a mere currency no more of them can be used than enough to fill the demands of commerce. That measure is the extent they will go, and it is clear and well defined. * * * I object to this bill on the ground, as I conceive, of its utter impolicy. I admit that from the contracts entered into—many of which, now due, I regret have not been paid as promptly as they deserve to be—and from the heavy monthly disbursements to our armies, that the Government can flood the country with even $150,000,000 of paper dollars. But from that moment you would vastly increase the cost of carrying on the war; prices would go up, and the addition we should pile upon our national debt would prove that it might have been even wiser to have burned our paper dollars before they were issued. The inflation of the currency would be inevitable. In ordinary times few comprehend the Archimedean leverage of a very few millions added to or subtracted from the currency of a nation actively engaged in the affairs of the world. In the former case it produces a crisis and general bankruptcy, and in the latter it puts every speculator on tiptoe to buy out his neighbor—his horse, his ox, his ass, or anything that by keeping overnight will put money in his purse. Property becomes as volatile as alcohol at boiling heat, and can not be kept within its ancient boundaries. The poor man, accustomed to butchers' meat, and who has not counted tea and coffee as luxuries, suddenly finds their daily use beyond his means. The ecstacy of an inflated currency is enjoyed by the few only, and these are cruelly punished when the gaseous influence subsides. * * *

The question of the constitutionality of this bill, although a grave one, I do not propose to discuss, especially as it will undoubtedly be examined by far abler hands. It will be conceded that the power is nowhere contained in the letter of the Constitution, and that in all our history since the adoption of the Constitution it has never been exercised. It is an inferential or doubtful power, lodged wherever gentlemen may choose to place it, and liable, as I presume this debate will show, to change its lodging place, like members of Congress, at very short notice. I should therefore regret to see such a power, if it exists at all, exercised at this time. The Constitution, in giving Congress the power to levy and collect taxes, gives us ample power, so long as taxable property in the greatest abundance exists, to make loans and protect the public credit. In this great crisis of our country, if we expect to retain the semblance of freedom, if we expect to retain any of the features of a Republican form of government, if we hope ever to see the epaulets stripped from the great host of military officers, now ready to go forth to battle, and their swords laid aside, we must hold every department of the Government and every officer to a strict adherence to the Constitution and the laws. We are the custodians of the destinies of our country, and must not provoke the inquiry, Who shall take us into custody?

The power to "coin money, regulate the value thereof, and of foreign coin," has been exercised often and not too wisely, but it had never been construed to cover the alchemical transmutation of paper into gold and silver. * * * By making paper a legal tender, no more specie will be seen, except through offers of rewards to draw it from its hiding places, until we emerge from our present difficulties, and not for an indefinite period, perhaps, thereafter. The $300,000,000 of specie said to be in the country, though I think there is not quite so much, will be hoarded and remain useless and idle for the rest of the war. I am for keeping this, the vital fluid of commerce, in healthy, active circulation. * * *

The fact in relation to the suspension of specie payments by the Bank of England from 1797 to 1823 are cited to prove the soundness of the policy proposed now of making paper a legal tender. The gentleman from New York [Mr. Spaulding] stated, and others may have done so, that the notes of the Bank of England were made a legal tender at the time referred to. This, I think, is a mistake. The bank was prohibited from paying out specie for them, and they were received and paid out in all business transactions by the bankers of London and others by mutual consent, but they were not made a legal tender. The English Government did not stain their reputation with such an act. * * *

But why did not the gentlemen cite a more recent case, and one exactly in point—that of Austria? Simply because that, as all others recorded in history have been, was a total failure. Austria undertook this process of making forced loans—for it is really nothing less—by making government paper a legal tender, and it proved a miserable failure. Their paper fell (or gold bore a premium, which is the same thing) 40 per cent. The Mexican mode of violent seizure is far more efficient and about equally sound in morals. * * * By taking the first step in making paper a legal tender we shall sever all connection with any other fountains of supply. We can not retrace our steps, but must go on. No sane man would spontaneously take stock liable by the practices of the Government to be reduced the very next day 10 per cent or any other per cent in its value; so that if Congress should have the virtue to wish to cease the further issue of these notes it would no longer be an open question. But, having tested this facile mode of paying debts, I fear the stern and honest mode of taxation would be repugnant to many constituencies, and that the doors of the temple of paper money would not soon again be closed. Gentlemen may think otherwise, but like a certain heroine who—

Said she'd ne'er consent, and consented still,

Congress would consent. If we have not the virtue and power to resist the temptation now, while our reputation is spotless, we shall have still less when the whole country becomes debauched.

Upon one point there can be no dispute. The Constitution expressly declares that Congress shall pass no ex post facto law. Can we pass a law compelling the acceptance of paper in view of standard coin in contracts made one, two, or five years ago? If the coin is only worth 3½ per cent more than paper is it not to that extent an ex post facto law and as much a violation of the Constitution as any law of a State could be "impairing the obligation of contract?" The right to change the standard of coin exists, but the right to create a standard of paper and give no option is a novelty. In the early days of our country it was the custom to make notes for merchantable neat stock in due form, with the addition of "bulls and stags excepted." Hereafter all contracts will need to be made payable in coin, or with the addition of "United States bulls and rags excepted." If the provision making the notes a legal tender should unfortunately pass, it certainly ought in equity to provide that it shall only apply to contracts hereafter made. * * *

I maintain that the bill, as reported by the Committee on Ways and Means, should not pass, because it would infinitely damage the national credit; because it will cut off all other chance of supplies; because it will reduce our standard of legal tender, already sufficiently debased; because it will inflate the currency and increase many fold the cost of the war; because it would slide into the place of proper taxation; because, as a resource, it must ultimately fail and tend to a premature peace; because it is a question of doubtful constitutionality; because it is an ex post facto law, and a breach of the public faith; because it will at once banish all specie from circulation; because it will dampen the ardor of men at home as well as soldiers in the field; because it will degrade us in the estimation of other nations; because it will cripple American labor, and throw at last larger wealth into the hands of the rich, and because there is no necessity calling for such a desperate remedy.

[Roscoe Conkling, of New York.]

I propose to assign my reasons briefly for voting against the attempt by legislation to make paper a legal tender. The proposition is a new one. No precedent can be urged in its favor; no suggestion of the existence of such a power can be found in the legislative history of the country; and I submit to my colleague,

as a lawyer, the proposition that this amounts to affirmative authority of the highest kind against it. Had such a power lurked in the Constitution as construed by those who ordained and administered it, we should find it so recorded. The occasion for resorting to it, or at least referring to it, has, we know, repeatedly arisen, and had such a power existed it would have been recognized and acted on. It is hardly too much to say, therefore, that the uniform and universal judgment of statesmen, jurists, and lawyers has denied the constitutional right of Congress to make paper a legal tender for debts to any extent whatever. But more is claimed here than the right to create a legal tender heretofore unknown. The provision is not confined to transactions in futuro, but is retroactive in its scope. It reaches back and strikes at every existing pecuniary obligation. This is well put by the gentleman from Ohio [Mr. Pendleton], and I concur with him, that substituting anything for gold and silver in payment of debts, and still more of precedent debts, is of very doubtful constitutionality.

A memorandum from the Attorney-General was produced here the other day, and the context in which it was read would indicate that it made something for this bill. I do not so understand it; on the contrary, if the Attorney-General has stated all that he can say in favor of the bill the plain conclusion to be drawn from his opinion is that it has no warrant in the Constitution. He says the Constitution contains no "prohibition." That is not the question. In looking for a power in the Constitution of the United States the point is precisely the reverse. The Constitution of the United States is an instrument of delegated and enumerated powers, and Congress has no powers except those which the Constitution confers. Not so with the legislatures of the States; they have all the residium of legislative power. In looking, therefore, for a power in the constitution of a State, the question usually is, Has it been taken away or forbidden? But in looking at the Federal Constitution the question is: Has the power been given; is it there? Can you put your finger upon it among the grants of the Constitution? If not, if it is not there at all, you have not the power, and there is an end of the whole matter.

But, passing, as I see I must, from the constitutional objections to the bill, it seems to me that its moral imperfections are equally serious. It will, of course, proclaim throughout the country a saturnalia of fraud, a carnival for rogues. Every agent, attorney, treasurer, trustee, guardian, executor, administrator, consignee, commission merchant, and every debtor of a fiduciary character who has received for others money, hard money, worth a hundred cents in the dollar, will forever release himself from liability by buying up for that knavish purpose, at its depreciated value, the spurious currency which we shall have put afloat. Everybody will do it, except those who are more honest than the American Congress advises them to be. Think of savings banks, intrusted with enormous aggregates of the pittances of the poor, the hungry and the homeless, the stranger, the needlewoman, the widow and the orphan, and we are arranging of a robbery of 10 if not of 50 per cent of the entire amount, and that by a contrivance so new as never to have been discovered under the administrations of Monroe, Adams, or James Buchanan.

To reverse the picture. After the act shall have gone into effect honest men undertake transactions based upon the spurious tender at its then value. By and by comes the repeal, and they are driven to ruin in multitudes by the inevitable loss incident to a return to a metallic currency.

I understand there are 40,000 petitioners in both Houses now praying for the passage of a bankrupt law. Provision will have to be made, on a scale of bankruptcy more liberal and gigantic than England ever saw, for the relief of honest people who will be cheated and ruined under the legal-tender system now proposed, if the country tries the experiment and survives it. But, surmounting every legal impediment, and every dictate of conscience involved, viewing it as a mere pecuniary expedient, it seems too precarious and unpromising to deserve the slightest confidence.

The whole scheme presupposes that the notes to be emitted will be lepers in the commercial world from the hour they are brought into it; that they will be shunned and condemned by the laws of trade and value. If this is not to be their fate, what is the sense, as was said in the Federal Constitutional Convention, in attempting to legislate their value up?

Now, I do not believe that you can legislate up the value of anything any more than I believe you can make generals heroes by legislation. The Continental Congress tried legislating values up even by resorts to penalties, but the inexorable laws of trade, as independent as the law of gravitation, kept them down. I do believe you can legislate a value down, and that you can do it by attempting to legislate it up. * * *

The only consideration which weighed with me in favor of this legal-tender scheme was, that the people, the Government having taken the coin from the banks, would be unable to pay their taxes in coin because they could not get it. That is a good suggestion, and all we need to meet is a very simple provision having none of the objections to making paper pay debts indiscriminately. You only want in the bill we pass the old doctrine of recoupment and set off, and then the citizen can pay his tax in Government issues. That is a sound and equitable doctrine. It is as old as the common law of England; as old as the civil law of Rome. It means merely this: If my friend here has my check, which has not been paid, and I have a tax or a debt against him, he may pay that tax or debt with the check, setting off one against the other and settle it. You need no legal tender for that.

But shall it be said that because we all agree that the Treasury notes to be issued should be receivable for taxes we shall go further and hoist flood gates of fraud by making these notes pay debts to the amount of their face, when the bill virtually admits that they will be worth but 90 cents in the dollar on the day the law takes effect? No; and I thank God that the great State of New York, which carries one-fifth of the burdens of the nation, and which has loaned for years to the Government 90 per cent of the money it has borrowed; I thank God that the State of New York has in the popular branch of her legislature set the seal of her disapprobation upon this monstrous proposition by a vote of almost 2 to 1. Such a step, if it should ever be taken by a government, should be taken only when everything else has failed and the last extremity has been reached. It is the last expedient to which kings and nations can resort. When you clothe an individual with the power to give his own checks to pay his debts and supply his wants, when he has nothing with which to pay them, and when you ordain that every man shall receive his check, you have performed for that man the last sad offices of financial humanity; there is nothing left to be done for him; and, if he fails then, he is past resuscitation and past resurrection. So of a government; you may try any other expedient with impunity, and, if it fails, you have remaining a resort to other things; but if you once authorize the issue and compel the acceptance of its own paper, and that proves to be a failure, there is nothing left; the die is cast; the last link is broken. * * *

[William P. Sheffield, of Rhode Island.]

Looking into the Constitution which created a government with limited powers, can we fairly deduce from any of its provisions the power to declare by legislative enactment that demand notes shall be a legal tender? The power is nowhere expressly given. Is it fairly implied from the powers which are given? The Constitution authorizes Congress to borrow money, to coin money, and to regulate its value; and by these means alone I apprehend that it was designed by the powers of the Constitution that we should support our Army; that we should provide and maintain a Navy; in a word, that we should carry on the Government. Congress is given these express powers. * * *

But I did not rise for the purpose of discussing that (constitutional) question. I am opposed to the legal-tender clause in this bill for another reason. In my judgment it is dishonest. That is a sufficient reason to induce me to vote against it. We have contracted with these men, who are the public creditors, and have promised to pay them money, and they had given us their merchandise, or given us their labor, upon the faith of that promise. Who is to trifle with the nation's faith? It seems to me that those men do it who support this bill. We have told these men that we would pay them in money. By this bill it is proposed that we give them paper. They ask us for bread and we give them a stone. * * *

But the legal-tender clause in this bill is the most odious feature of the system. Send out your bills with a declaration upon their face that you have not confidence in their value and who will take them? Yet the very fact that you propose to force them upon the public against the will of the people implies that force is necessary in your judgment to induce the people to take them. Men are so constituted that they do not like to be deprived of their free agency. They are not willing to be forced to do anything, not even that which without force they would be entirely willing to do. Let one or two men in a neighborhood who have the specie wherewith to pay their debts go and sell that specie for a premium and then buy Treasury notes and pay their debts with them, while they pocket the difference between the two values and throw the loss upon their creditors, and you will, by this simple act, raise the sense of justice of a full community against this system; yet who is there that has any knowledge of human affairs that does not know that this will be one of the practical results which will follow the passage of this bill. The ingenuity of man could not, in my poor judgment, have devised a scheme of finance better calculated to injure our country and all of its interests than that which has been presented in the two bills of the Committee of Ways and Means.

[Frederick A. Pike, of Maine. February 5, 1862.]

Upon the clause in this bill, providing that the notes shall be a legal tender, there has been much discussion here and elsewhere. Its importance to the success of the measure can not be overestimated. I regard it as the life of the plan. Strike it out and we are but duplicating an issue of notes already at a discount. It is really the specie clause, and no hard-money man—and I claim to be one—should vote for the issue of these notes without it. Objections have been made that it is unconstitutional—and a word upon that point.

In my judgment any measure of finance now assumes the highest character. The existence of the Government depends upon the successful administration of the finances. Crippled here we are balked everywhere. Upon the consideration of every financial measure there might well present itself anew the same question so fitly put by President Lincoln, in his message to Congress in July: "Is it better to assume powers, the exercise of which shall violate a portion of the Constitution rather than allow the whole to be destroyed?" and the country came to the paradoxical conclusion that it was his duty, as President, to violate the Constitution in order to preserve it. * * *

I have a high respect for the motives of gentlemen who discover so many constitutional objections to contemplated action; but for myself, I have concluded that whatever has a tendency to furnish means to suppress this rebellion, and affords a reasonable probability of hastening the consummation of what all loyal men so much desire, is perfectly constitutional. Nothing but an absolute prohibition would prevent me from adopting a measure which answers these conditions. I will never render to my people as a reason why I voted against such a measure that I deemed it unconstitutional, nor will I assist this Congress in proclaiming to the world and sending down to posterity the lack of constitutional power as a reason for failing to enact any law which will have a tendency to preserve this Union. This is no time for the exercise of thin constitutional pedantry. Let us act boldly and forcibly, and so discharge the high and solemn duty imposed upon us infinitely better than if we shrunk from action under fear of constitutional scruples." * * *

The objection which is supposed to be fatal to the constitutionality of this measure is that it impairs the obligation of contracts. But granting that the prohibition in the Constitution—of State action with reference to contracts—extends to Congress, still the objection has no validity. The legal effect of all contract language is to pay the sums specified therein in legal currency. * * * As to the expediency of making these notes a legal tender I have no doubt. Those who favor the issue of the notes and oppose this clause present this anomalous position. They favor the issue of the notes for $100,000,000 for the purpose of paying creditors to whom that sum is due. They say to our Treasurer: "You will take these notes and pay Government debts with them at par." A Government creditor will be obliged to take these notes or wait, without interest, until that happy period in the future when the Government shall resume the payment of specie in the discharge of its indebtedness.

Thus, then, the Government will pay its creditor $1,000 in bills in full discharge of a debt of $1,000, and still it will not authorize that creditor to pay a debt he owes John Doe, for the same sum, with the same money. In this way it is tacitly acknowledged that the indebtedness of the Government, which represents all property is not so valuable as that of the private citizen who represents but a small fraction of that property. If this be not the meanest kind of bankruptcy, I do not know the meaning of the term. * * * If we can not pay our creditors in gold and silver, let us come as near it as possible. It is not doubted by anybody that making the notes a legal tender will add to their value in the hands of Government creditors. It is a kind of indorsement that can not possibly injure the circulation of the note in any event, even if declared by the courts as of no validity, and will, for a time at least, add considerably to their money value. If not exchangeable for specie, they will come nearer to being of the same value. * * *

[Hendrick B. Wright, of Pennsylvania.]

I have an abiding faith in the honesty, the honor, and the integrity of the American people; and I believe they will not stand idly by, withhold their treasures, or only contribute them grudgingly, when they are to be used in saving the Government. Therefore, I am one of those who do not wish, in this great emergency, to resort to a subterfuge. If we have money, let us bring it into use. I will vote for taxation to the very uttermost limit. The people have means enough in their hands. As the gentleman from Maryland [Mr. Crisfield] said this morning, in his well-timed remarks, if we must resort to a thing of doubtful expediency, let that resort be made as the last act of the drama. Let us not commence at the outstart by attempting to do, in the first place, an unconstitutional act, and in the second place by putting ourselves into positions which will, in my opinion, bring upon the country a worse ruin than the arms of rebels have already brought upon it.

If I were clear in my own mind that Congress had the right and power to make paper money a legal tender with reference to all the transactions of government, even making its application retrospective as well as prospective, I should have no hesitation in casting my vote in favor of this bill. If we are compelled to flood the country with an issue which has no time for redemption, that being at the pleasure of the Government, I would clothe the issue with all the power which the Government has to give it currency. * * * If Congress in its attempt to put this currency upon the country must in the first place trample on the provisions of the Constitution to effect that, and must besides run the risk of what view the Supreme Court may take of the measure, I ask whether it is wise, prudent, and just to incur such risks and hazards. * * * How can I, under the oath which I have taken here to support the Constitution, vote to sustain the principles contained in this bill, namely: That Congress has the power to emit not only bills of credit, but to make these bills of credit a legal tender in all transactions of the Government, and among people everywhere in the country, giving it a retrospective as well as a prospective effect.

It is said that this is among the great powers of the Government. Why, all the powers that this Government has under the Constitution are powers delegated to it by the several States which thus met in convention. There is no such thing in construing the Constitution as inference. There is nothing to be implied. The States that met together in convention clothed Congress with all the powers in express terms that Congress can legitimately exercise under the Constitution. Who doubts that? Who can gainsay that proposition? * * * This bill proposes to throw on the country, according to the terms of the first section, $100,000,000 of Treasury notes, payable at no time, payable nowhere—payable at the pleasure of the Government—and the astounding clause is added that these Treasury notes, payable at no place and at no time, shall be lawful money and a legal tender in payment of all debts, public and private, within the United States. Now, I submit it to this committee as a matter of law, as a correct conclusion from the Constitution itself, that you can not under the Constitution of these United States make anything but gold and silver a legal tender on contract. I come to this conclusion because there is no such written power in the Constitution. I come to it because the members of the convention which framed the Constitution had this very question before them, and decided it by a vote of nine States on the one side to two States on the other.

Now, gentlemen who are in favor of passing this bill must not pretend to say that its provisions accord with the principle, the spirit, or the letter of the Constitution. If they ask us to throw this issue upon the country as a measure of expediency, disregarding the provisions of the Constitution, that is another question; but they must not pretend that they are doing a constitutional act in the emission of bills of credit, because I do not think that under the terms of the Constitution Congress has power even to emit bills of credit, much less to make these bills of credit a legal tender in regard to contracts between private parties or between the Government and the parties with whom it is dealing.

Under the power of Congress to coin money there is certainly no power to emit bills of credit. Under the terms of the Constitution giving to Congress the power to regulate commerce with foreign nations and among the several States, there is certainly no power to emit bills of credit. And under the concluding clause of that section, giving to Congress power to pass all laws that shall be necessary and proper for carrying into execution the foregoing powers, it can not be contained, because the Constitution gives to Congress the power to do only those things which had been enumerated in the foregoing sections.

[Valentine B. Horton, of Ohio.]

I do not expect by anything I shall say to convince any man who has already examined this question; but still I wish to utter my voice of warning against being driven by a supposed and asserted imperious necessity into this measure. It is conceded to be against all the teachings of experience, against all our habits of thinking, against all our sentiments of right, and against all our opinions about political wisdom and prudence.

It has been asserted upon this floor, with the utmost apparent sincerity, that this is a measure not of choice, but of necessity. But that assertion is only reiterated, not proved. Where is the proof that it is a matter of necessity? There may be proofs abundant, but they have not been produced, so far as my knowledge or observation extends. They may exist outside, or they may possibly exist here; but they have not been made apparent, so far as I have been able to discover. * * *

I have said that the necessity for this measure has been asserted

but not proved. Of course, I speak with no disrespect of the speeches which have been made upon this floor; but I have failed to hear any argument that it is necessary. I know perfectly well that the Secretary of the Treasury thinks that it is necessary, and I have the utmost confidence in his ability and zeal. I think he is mistaken. At any rate, whether he is mistaken or not, he has not furnished us with proof of the correctness of his opinion. I think I can give some reasons for my belief that he is mistaken, and until reasons can be given that will overbear these, I think that we ought to conclude that a necessity does not exist for us to blight the fair name of the Government, to impair the public morals, and to set afloat the ship of state in a fog on a sea of bubbles where no human skill can direct or control it, and where ruin is as inevitable as cause is sure to precede effect. The proofs I offer are these: There is no want of money; there is no want of patriotism; there is only one little thing wanted, which, in the phrase of the old story, is "the grand confidence." * * *

[William Kellogg, of Illinois.]

This subject of the issuance of Treasury notes is important in this connection. The proposition directly before the committee at this time is simply this: Whether now we must have money, now that we must have a currency, we shall have a good currency, or a bad currency? The question is in relation to the issuance of these notes; and the great question is whether they shall be made by law of value, whether, in other words, they shall be made a legal tender; whether that provision shall be attached to them by the direction of the legislative department of the Government, or whether we shall fail to make that provision so that the harpies, when they have gorged themselves, may befoul all else of the feast? It is a question whether we shall have a currency that will pass by law and have intrinsic value, by the operation of law in this, that it pledges all the capital of the nation for the ultimate redemption of the notes; whether for that reason we shall have a currency that shall pass from hand to hand, or whether we shall have a currency that shall be placed at the mercy of the banking institutions, of the brokers of the country who will seek to, and doubtless succeed, in its depreciation?

The exigencies of the times require some action upon this subject; but the exigencies of the times do not require me, and never will require me, to vote for a law that is in violation of the Constitution, whether in the shape of this bill or any other bill, for the purpose of carrying on this Government; for when the Congress of the United States itself violates the Constitution, it is mockery to say that we are carrying on a war under the Constitution for the purpose of maintaining the Constitution.

But upon this subject, in looking over the history of the country, in looking through the judicial and legislative judgment in relation to this power, I have satisfied myself that we have fairly the power under the Constitution to make these notes a legal tender; in other words, to give them value by means of legislation, in the manner I have before indicated, in pledging the entire property of the country for their ultimate redemption.

It is said there is no power to make them a legal tender, and that that is not a legitimate way of expressing their value. If gentlemen are sure upon that subject, they would do well to run back a little further and ascertain whether there is any power under the Constitution vested in Congress to issue the notes at all. And I confess the argument of the gentleman from Ohio, Mr. Pendleton, ran back legitimately to that proposition. At least it carried my mind back to that proposition so fairly and certainly that if I found no power to issue these notes I would have voted against this bill. To that my mind has turned with every argument that has been made. I may have been obtuse, but I confess that I have come to the conclusion that we have the constitutional power to issue these notes; and having that constitutional power, we have, as an incident to that power, the power also to make them of value. * * *

I was saying that if we had the power to issue, we have also the power to fix the value of the issues. It is an incident to the power of issuance. It is to carry out in good faith that power. If you do not issue these notes to take the place of money—to represent money—then in God's name do not issue them. Do not give to the people that which they will not understand. Let there be no deception; let the creditors of the Government know whether or not the Government is trying to palm off upon them a spurious, depreciated currency under the guise of money. If we have the right to issue it, and to impress it with the denomination of $5, and pay it out for $5, why not stamp upon its face that it is $5 everywhere? * * * I understand gentlemen all around me to agree that we should make them payable for the indebtedness of the Government. I am certain that I heard the gentleman from Rhode Island [Mr. Sheffield] declare that he was willing to make these notes payable to the creditors of the Government and receivable for Government dues. But he said that it was dishonest to make them a legal tender between individuals.

I was shocked at this declaration. Is it dishonest to make it a legal tender between gentlemen who are at home at their ease, and making money out of our complications and calamities; dishonest to compel them to receive it as currency, and honest to pay your 600,000 soldiers in the same currency? Is it dishonest to make the trafficker, the huckster, the broker, the banker, and speculator take this money for their debts, and honest to pay it to our private soldiers who are fighting for this Government at $13 per month; men who are our peers, our sons, our brothers; men who at this inclement season are undergoing the hardships of the camp and the dangers of the battlefield? Dishonest, it is said, to pay these notes to the banks and compel tnem to receive them at par. Thank God! that there are few of them in Illinois. They have been mostly obliterated, as they ought to be. * * * I say that the policy which makes payment in Treasury notes to the soldier proper and honest, and dishonest to make them a legal tender in payment of private debts, is a policy that I denounce as unjust and indefensible. I denounce and condemn it unless it shall be equally binding upon the citizen at home as the soldier in the field. To the wind with such logic and to the devil with such morals. * * *

Well, now, what is a legal tender? It is the fixed legal value of that which circulates as a medium; and by fixing the legal value of anything which becomes a currency you make it a legal tender. If I owe you $50 I may pay it in that currency to which is affixed a legal value; and when judgment is recovered against me for $50 I can pay it in anything that is by law $50. When you fix the value of coin, of lead, or iron, or copper, and of the alloys in gold and silver, you establish a legal tender, and that is all there is of it; and I say you can do it in a note as well as in coin of any kind. * * *

[Benjamin F. Thomas, of Massachusetts.]

* * * Though the legal question has not been judicially settled, I feel compelled to say that the weight of reason and authority is strongly against the validity of the clause making the Treasury notes legal tender. If the validity of the provision be doubtful even, and it becomes, as it inevitably would, the subject of contest and litigation in the courts, the effect upon the credit of the paper will, in my judgment, be worse than if the tender clause had been wholly omitted.

I have a word or two to add upon the justice of this clause of the bill. To make these notes legal tender for debts, private and public, contracted before the passage of the bill, seems to me a clear breach of good faith. Debts are obligations or promises to pay money, the only money known to the Constitution and the laws, the universal equivalent, having not merely intrinsic value, but being the measure and standard of value. Paper is not money. The draft bill or note is the mere sign; money is the thing signified. Said John Locke: "Men in their bargains contract, not for denominations or sounds, but for the intrinsic value."

This bill changes the condition and practically impairs the obligation of every existing contract to pay money. When the contract to pay money matures, this bill compels the creditor to take for his debt not money, not even paper convertible into money on demand, but the promise of Government to pay at a future day uncertain. It is a perfect answer of the creditor to this proposition to say: "That is not my agreement; a mature debt is not paid by a promise to pay." But further, the faith of the contract is broken because the creditor is not paid in gold or silver, nor in that which is equivalent to gold and silver. He neither gets the coin nor its value in any form; the money, nor the money's worth. * * *

This provision of the bill in the nature of a forced loan is in itself a confession of weakness. It seeks to compel credit for the reason that it does not come spontaneously. It assumes that force is necessary to uphold that which must stand on its own legs or can not stand at all. Credit is faith; is trust; is confidence. If you faithfully keep your promises; if, by taxation, you avail yourselves of all the resources of the country for the salvation of the country; if you keep always in view the end for which this conflict is waged; if, in seeking to enforce the Constitution and the laws, you show a readiness yourselves to obey the Constitution and the laws, you will win credit; you can not command or enforce it. It will follow in the footsteps of rectitude; you can not drive it before you. You may, by this bill, say that paper is money; give the same names to things vitally different. The essential difference will be none the less clearly perceived and strongly felt. It is no want of respect to say to you, you can not change the nature of things.

The friends of this feature of the bill, Mr. Chairman, admit the reluctance with which they assent to it. The only ground of defense is its necessity; that no alternative is left to us. I deeply respect their motives, but I can not see the necessity.

We have spent a great deal of money in this war, and have wasted a great deal. But we are not impoverished. What we

have spent is trivial in comparison to what is left. The amount up to this time will not exceed two years of surplus profit. It is not more than one thirty-second part of our whole property. Not a dollar of tax has been raised, and yet we are talking of national bankruptcy and launching upon a paper currency. I may be very dull, but I can not see the necessity or the wisdom of such a course.

[Albert G. Riddle, of Ohio.]

The quality to be exclusively relied upon to insure the circulation of a paper medium is the never-questioning confidence of a community in the ability and intention of its issuers to pay it. The paper, then, should bear on its face the highest proof of this ability and intention; and no mark or characteristic that would raise a doubt or lead to inquiry should mar it. When paper, whether issued by individuals, corporations, or nations, is once issued, it is subject to precisely the same laws, and under the same circumstances will reach and produce similar results. In these respects no difference can exist.

The name "national currency" may delude. The only possible difference that can exist between paper issued by a nation and that issued by an individual is, a nation can write more evidences of its ability and intention to pay upon its obligations than can an individual. No other difference can exist. The making these notes receivable mutually between the Government and its creditors and debtors, and also a legal tender, does not and can not fall within the evidence of the nation's ability and inclination to pay them; nor can those characteristics in any way add to the stability of this currency or provoke a confidence in the people to receive them.

They are only facilities by which a most dangerous and unhealthy circulation will be stimulated and secured. I am prepared to make these notes receivable for the public dues, which does make them a qualified legal tender, I admit, and gives to those who contend for the main proposition a serious advantage in the argument; but beyond that I will not go. The power to make these notes a legal tender is a constitutional vagabond, and find a lurking place nowhere in our system. The proposition that because the States only were prohibited this power, and therefore we may exercise it, needs no further refutation.

The grounds on which my distinguished colleague [Mr. Bingham] rests this power are most extraordinary. He says that the Constitution has conferred no power upon Congress at all in reference to the subject of legal tender—says nothing at all about it—and therefore we have the power to make paper a legal tender, and money generally. Why, according to him, a man might, with a tin cup of a prescribed pattern, dip up a pint of water from the nearest puddle and make that a legal tender if the Congress should so will. This is beyond the reach of argument. Not only is there no warrant for this power, but its exercise violates the whole spirit of the Constitution. Under that we may in one way impair contract; that is, we may discharge men from the obligation of a contract by a bankrupt law; but that we can do only by an express grant of power. * * *

This quality of legal tender can not add to the stability of this currency, nor will it induce confidence, but the reverse of both. It comes in "a questionable shape," bold, confessing, and shameless, and if a man takes it at all it is not because he wants it, but either because he must have it or because he trusts to this characteristic to get rid of it again. Indeed, one of the arguments used for the incorporation of this provision into this bill is, that the creditors of the Government who must take these notes must have the power to get rid of them again as a matter of justice to them, otherwise they might perish on their hands. The death ought to occur one remove from them. In the name of all commercial sagacity, how long do you expect to keep afloat a currency that thus has to cut its way into market—be shot into men, so to speak?

[James H. Campbell, of Pennsylvania.]

Whatever measure is now or hereafter may become necessary to adopt in order to maintain the Union and perpetuate free government, that will I support. Speak not to me of "objections" and "scruples" and "dangers," of "constitutional objections" and "conservative influences." Sophistry is ever plausible, and opposition to a just and necessary measure generally wears the mask of a "constitutional objection." The highest duty of every member is to maintain the Union—to sustain the Constitution against this causeless and wicked rebellion; and in doing this, let us bear in mind that the Constitution was made for the people—to secure to them and their posterity the blessings of free government. Therefore, with me the final inquiry is, Is this measure necessary to suppress the rebellion? If it is, here am I ready to sustain it. It will be found the Constitution gives ample power to sustain this view.

[Thaddeus Stevens, of Pennsylvania.]

This bill is a measure of necessity, not of choice. No one would willingly issue paper currency not redeemable on demand and make it a legal tender. It is never desirable to depart from that circulating medium which, by the common consent of civilized nations, forms the standard of value. But it is not a fearful measure; and when rendered necessary by exigencies, it ought to produce no alarm. * * *

The power to emit bills of credit and make them a legal tender is nowhere expressly given in the Constitution; but it is known that but few of the acts which government can perform are specified in that instrument. It would require a volume larger than the Pandects of Justinian or the Code Napoleon to make such enumeration, whereas our Constitution has but a few pages. But everything necessary to carry out the granted powers of the Government is not only implied but expressly given to Congress. If nothing could be done by Congress except what is enumerated in the Constitution, the Government could not live a week. * * * The right to emit bills of credit, which the Convention expressly refused to grant as a substantive power, has for fifty years, by the common consent of the nation, been practiced, and is now conceded by every opponent of this bill. With what grace can the concomitant power to make them a legal tender be objected to? * * *

Whenever any law is necessary and proper to carry into execution any delegated power, such law is valid. That necessity need not be absolute, inevitable, and overwhelming; if it be useful, expedient, profitable, the necessity is within the constitutional meaning. Whether such necessity exists is solely for the decision of Congress. Their judgment is absolute and conclusive. If Congress should decide this measure to be necessary to a granted power, no department can rejudge it. The Supreme Court might think the judgment of Congress erroneous, but they could not review it. Now, it is for Congress to determine whether this bill is necessary "to raise and support armies and navies, to borrow money, and provide for the general welfare." They are all granted powers. It is for those who think that it is not "necessary, useful, proper," to propose some better means, and vote against this; if a majority think otherwise, its constitutionality is established.

If constitutional, is it expedient? It is objected by the gentleman from Ohio that the legal-tender clause would depreciate the notes. All admit the necessity of the issue, but some object to their being made money. It is not easy to perceive how notes issued without being made immediately payable in specie can be made any worse by making them a legal tender. And yet that is the whole argument so far as expediency is concerned. Other gentlemen argued that this would impair contracts by making a debt payable in other money than that which existed at the time of the contract, and would so be unconstitutional. Where do gentlemen find any prohibition on Congress against passing laws impairing contracts? There is none, though it would be unjust to do it. But this impairs no contract. All contracts are made not only with a view to present laws, but subject to the future legislation of the country. We have more than once changed the value of coin. * * * Whoever pretended that was unconstitutional? The gentlemen from Vermont [Mr. Morrill] and Ohio [Mr. Pendleton] think it an ex post facto law. It is not wonderful that my distinguished colleague, not being a professional lawyer, should not be aware that the ex post facto laws prohibited by the Constitution refer only to crimes and misdemeanors, and not to civil contracts. The gentleman from Ohio no doubt knew, but forgot it.

The general debate was then closed. A few amendments were offered and a vote was taken on a substitute measure offered by Mr. Horton as one having the sanction of one-half the Committee on Ways and Means. This substitute provided for the issue of $100,000,000 of Treasury notes, bearing interest at the rate of 3.65 per cent per annum, payable in two years after date, such notes being receivable for all public dues, except duties on imports, and for all salaries, debts, and demands owing by the United States to individuals, corporations, and associations within the United States, at the option of such individuals, corporations, and associations. These notes were exchangeable for United States bonds. Upon taking a vote on this substitute measure, it was rejected, 95 to 55. The original measure was then put on its passage and adopted, 93 to 59.

White, Wickliffe, Wright—59.

On February 7 Noell wished his vote to be recorded in the affirmative, having been absent at the time the vote was taken, and on the 11th Wood, of New York, wished his vote recorded in the negative.

The geographical distribution of the vote was as follows:

New England States, 16 yeas and 11 nays; Middle States, 38 yeas and 23 nays; Virginia, 3 yeas; Western States and Territories, 37 yeas, 27 nays.

DEBATE IN THE SENATE.

On February 10 the bill, with amendments, was reported to the Senate from the Committee on Finance. The debate was begun two days later by the chairman of that committee, Mr. William Pitt Fessenden, of Maine.

With regard to the particular bill now before the Senate, we all know that it was resorted to as a temporary measure, not in the beginning, but in consequence of the necessities of the Treasury, arising from a greater expenditure than the Secretary could have imagined, and arising from the necessary delay with reference to other measures. Can it be said that a measure like the one now pending before the Senate and the country is a measure of a day or an hour? Why, what does it propose? It proposes something utterly unknown to this Government from its foundation; a resort to a measure of doubtful constitutionality, to say the least of it, which has always been denounced as ruinous to the credit of any government which has recourse to it; a measure, too, about which opinions in the community are divided as perhaps they never have been divided upon any other subject; a measure which when it has been tried by other countries, as it often has been, has always proved a disastrous failure.

I have already said that we have never attempted to resort to such a measure before. We have had a war with England since our Government was formed, and if I am rightly informed, at that day the stocks of the Government went down to 60 per cent, and pay was taken for them in such currency as could be received, itself depreciated; and yet it did not occur as a serious question to the men of that day to put forth, under the Constitution, irredeemable paper, made a legal tender for the payment of debts. To be sure, the country then was poor; it is now rich, comparatively. The country had not then the resources that we have; and perhaps it would have had the more excuse for adopting such a course. I do not urge this as an argument against it at the present time, but only as showing the nature of the measure itself to which it is now proposed to have recourse in order to place the Government in a better position, especially when you observe that everybody who has spoken on this question, I believe without an exception—there may have been one or two—but all the opinions that I have heard expressed agree in this: That only with extreme reluctance, only with fear and trembling as to the consequences, can we have recourse to a measure like this of making our paper a legal tender in the payment of debt. * * *

But the committee thought, in giving this enlarged power to the Secretary at this time (of selling bonds for what they would bring), that it was bound—if this legal tender was to be resorted to, especially if the bill of the House as it stood should be adopted by the Senate, and should become a law—that an assurance should be given to the country that it was not to be resorted to as a policy; that it was what it professes to be, but a temporary measure. The opinions of the Secretary of the Treasury are perfectly well known. He has declared that, in his judgment, it is, and ought to be, but a temporary measure, not to be resorted to as a policy, but simply on this single occasion, because the country is driven to the necessity of resorting to it. I have not heard anybody express a contrary opinion, or, at least, any man who has spoken on the subject in Congress. The chairman of the Committee of Ways and Means, in advocating the measure, declared that it was not contemplated, and he did not believe it would be necessary to issue more than $150,000,000 of Treasury notes made a legal tender, provided by this bill. All the gentlemen who have spoken on the subject, and all pretty much who have written on the subject, except some wild speculators in currency, have declared that as a policy it would be ruinous to any people; and it has been defended, as I have stated, simply and solely upon the ground that it is to be a single measure, standing by itself, and not to be repeated. * * *

I wish now to say something upon the main question of the bill, which I have avoided touching, except incidentally; and that is the clause making these notes a legal tender; for, after all, that is the great question now submitted to the Senate. The Senate will observe that the committee make no recommendations on that subject, except such as may be inferred from the fact that they report it back. They report the bill back retaining the clause, and so far an inference might be drawn that the committee were in favor of it. Under the circumstances of the case in the committee (of which, perhaps, I may speak with propriety, as the committee, as a whole, had no opinion upon the subject, their opinions being so divided) I deem myself at liberty, as I should, perhaps, be under any circumstances, if need be, and if my opinions lead me in that way, to say what I have to say in opposition to that clause. * * *

The ground upon which this clause making these notes a legal tender is put I have already stated. It is put upon the ground of absolute, overwhelming necessity; that the Government has now arrived at that point when it must have funds, and those funds are not to be obtained from ordinary sources, or from any of the expedients to which we have heretofore had recourse, and this new, anomalous, and remarkable provision must be resorted to in order to enable the Government to pay off the debt that it now owes and afford circulation which will be available for other purposes. The question, then, is, Does the necessity exist? * * * Is this measure absolutely indispensable to procure means? If so, as I said before, necessity knows no law.

What are the objections to it? I will state them as briefly as I can. The first is a negative objection. A measure of this kind certainly can not increase confidence in the ability or the integrity of the country. It can make us no better than we are to-day, so far as this foundation of all public credit is concerned.

Next, in my judgment, it is a confession of bankruptcy. We begin and go out to the country with the declaration that we are unable to pay or borrow, at the present time, and such a confession is not calculated to increase our credit.

Again—Say what you will, nobody can deny that it is bad faith. If it be necessary for the salvation of the Government, all considerations of this kind must yield; but to make the best of it is bad faith, and encourages bad morality, both in public and in private. Going to the extent that it does, to say that notes thus issued shall be receivable in payment of all private obligations, however contracted, is in its very essence a wrong, for it compels one man to take from his neighbor, in payment of a debt, that which he would not otherwise receive or be obliged to receive, and what is probably not full payment.

Again—It encourages bad morals, because, if the currency falls (as it is supposed it must; else why defend it by a legal enactment), what is the result? It is that every man who desires to pay off his debts at a discount, no matter what the circumstances are, is able to avail himself of it against the will of his neighbor who honestly contracted to receive something better. My judgment is that anybody who would avail himself of a position and a power of that kind, thus conferred on him by law, has forgotten the principles of right and wrong between man and man, for legal enactments can not make that right between man and man which otherwise would be wrong. I say, therefore, that another objection which has been stated, and of which the force must be admitted, is that it is bad faith.

Again—Necessarily as a resort, in my judgment, it must inflict a stain upon national honor. We owe debts abroad yet. Money has been loaned to this country, and to the people of this country, in good faith. Stocks of our private corporations, stocks of our States and of our cities, are held and owned abroad. We declare that for the interest on all this debt, and the principal, if due, these notes, made a legal tender by act of Congress, at whatever discount they shall stand, shall be receivable. Payment must be enforced, if at all, in the courts of this country, and the courts of this country are bound to recognize the law that we pass. * * *

Again—It necessarily changes the values of all property. It is very well known that all over the world gold and silver are recognized as money, as currency; they are the measure of value. We change it here. What is the result? Inflation, subsequent depression, all the evils which follow from an inflated currency. They can not be avoided; they are inevitable; the consequence is admitted. Although the notes, to be sure, pass precisely at par, gold appreciates, property appreciates—all kinds of property. * * *

Again, a stronger objection than all that I have to this proposition—I am stating the objections which everybody must entertain, because I suppose these facts are palpable—is that the loss is to fall most heavily upon the poor. I believe it never was disputed, it can not be in the light of experience, that those who are injured most by an inflated currency are the laboring man—the poor. The large capitalists can bear it; but there are small capitalists in this county whom it will vastly injure. When you speak of a capitalist, in the common acceptation of the term, you mean a rich man; but every man who is free of debt and earning something, and earning a surplus, is a capitalist; and the greater number of capitalists together make up a great whole, and these are the men who suffer by the disorder of affairs—the poor laborer, in the first place, more than all; small capitalist, if I may so call him, next; and the rich capitalist last of all. Such is the necessary result and consequence always of this system * * *

This is a great crisis truly. Everything depends upon our credit and our ability to meet our wants financially. I have no doubt myself that we shall be able to meet them; and I must confess to the leaning of my opinion that we shall be as well able to meet them without this legal-tender clause, as it is called, as with it; that our paper will be as good and our credit and character much better without it. * * *

[Jacob Collamer, of Vermont.]

It is proposed to try the old experiment again. These notes are to be put in circulation at a discount, as everybody knows; and the very form of the bill concedes it. The bill not only provides for the issuing of notes, but provides that they shall be a tender in payment of debts. If they are to be at par, and are to be kept at par, what occasion is there for the tender clause? It is utterly useless. It goes upon the ground and it includes the implication that they are not to be at par. The bill, as it came from the House of Representatives, in order to give currency to these notes, provided that men should have a right, when they had a quantity of them, to fund them in Government bonds, having twenty years to run, with interest payable in what? In these very notes that they had put in. It was saying to them, "If you will only take these notes, you may fund them in a bond, and take your pay in the notes again." What a financial juggle is that!

That is the form in which it came to us from the other House; but an amendment reported by our committee and adopted by the Senate provides that the interest, at least, shall be payable in money. When I use that term some gentlemen may say that it includes these notes, because we declare that these notes are money, and they think that that declaration makes them money. We know that of old there was a set of men in the world called alchemists, one of whose projects was to discover what they called the philosopher's stone, which would transmute everything into gold, but I believe they never went so far as to suppose that they could make gold out of anything but the baser metals. We propose to make it out of paper, without a particle of metal in the composition.

No; this is aiding and assisting men who happen to owe debts to pay those debts at par with a depreciated paper at the cost and expense of the creditor. That is it, disguise it as much as you please. I call that impairing the obligations of contracts. * * * You do this in the very bill with which you go before the community and ask for credit upon your plighted public faith. * * *

From the extracts which I have read, I deduced the conclusion, first, that such paper, put out without provision for its payment, and undertaken to be coerced upon the community by tender clauses, always, and in all countries, here and elsewhere, not only deteriorates, but I think I may safely say that such paper put out upon such terms and conditions in the history of the world never was paid, and I shall hereafter endeavor to show why in all probability it never will be. My honest opinion is that the Constitution never intended to invest Congress with any such power. On that point I will suggest, first, that if this power was given to Congress it would be perfectly and utterly useless except for purposes of injustice. Suppose there were no debts; suppose all debts were obliterated, and we were now about to raise money to start in our important national concerns, wanting credit, and we had said, in order to get along, that Congress shall have any power to make the paper issued by the United States a tender; and suppose Congress directed an issue of paper and declared that it should be a tender; I ask whether anybody on earth could by that act be compelled to take it? Would not that tender clause be brutum fulmen?

I am going now on the supposition that nobody now has anything due to him. Then, of course, there is nobody to whom you can make a tender. As to taking it for his property, a man is under no obligation to do that. Then a power of that kind given to Congress in the Constitution would be simply and utterly useless; it could have no practical effect. Then, suppose we had debts; what does it do? Would you invest Congress with the power in such a case? It is good for nothing under heaven but to enable people to cheat; Congress gets nothing by it. You put out your paper; it deteriorates, it is at a discount. A man sells his property for whatever price he pleases; and if he knows that he is to get this paper in payment he will put on an artificial price to make up for this deterioration; and then he can tender the paper to his creditor in payment of a debt at its par value, though that creditor may thereby lose 25 per cent of his debt. The obligation of the contract is impaired just that amount by the act of the Government. If that is the only practical use that can be made of a power in Congress to make paper a tender, it seems to me that it does not commend itself very much, nor do I think anybody will be very ready to believe that the convention framed the Constitution on purpose to give this useless power just to enable some men to cheat their creditors. It would require a great deal more than silence to convince me that the convention actually intended to vest such a power as that in Congress for such an unjust purpose; and it can be used for no other purpose. * * *

Where is the power to do this derived from? It is said to be an incidental power, falling within that provision of the Constitution giving Congress authority to make all the laws which are necessary and proper to carry into effect the granted powers. When gentlemen desire to get some latitude and elbow room for action, I know that they are generally exceedingly desirous to get a thing into that category. If you can only get the power into that incidental clause, you have plenty of elasticity. It has so much India rubber in it that you can take just as much elbow room as you want. There is, therefore, in those who desire to magnify their office and their power a very strong inclination to resort to this clause.

It is said to be incidental to a great variety of powers. It is said that Congress has power to raise and support armies—ergo, the incidental power to raise money in this form or any other form for the purpose of supporting armies. So it is said that the Government has power to pay its debts; ergo, we may raise money in this way. The most general pack horse for this incidental power, however, has been the authority given to Congress by the Constitution to regulate commerce, and this power is said to be derived from that. * * *

The Constitution says that Congress may "regulate commerce with foreign nations, and among the several States, and with the Indian tribes." Here is a bill authorizing the issue of Treasury notes and making them a tender in payment of debts. I want to know what that has to do with trade between the States? To my mind that, if it is doing anything, is regulating trade between me and my neighbor in the same State, not regulating trade between separate States, and not regulating foreign trade. It is merely regulating a shaving trade between debtor and creditor. The bill proposes to make these notes a tender to pass as the representative of value in trade between man and man. Under this clause of the Constitution it might be proposed to adopt some measure for a commercial agency or commercial functionary; but if you make paper a tender, as I have before remarked, nobody will be bound to take it in exchange for property. Then it can not be a measure of regulating commerce. It will not regulate it at all.

But I have another idea in relation to all this business of incidental power. What is this measure? A bill to raise money to enable the Treasury to get along. There never can be such a thing as an incidental power in Congress to do a thing where there is an express grant of power for the purpose. If the power is expressly granted, that power only is to be exercised within its own limitations. You can not abandon that express provision and hunt out for yourself some more convenient mode of getting latitudinarian authority by laying it under an incidental power. This is a money measure, nothing more, nothing less. * * * There is an express power granted to Congress to raise money; and it is further to be observed that the Constitution not only gives the power to raise it, but regulates the manner of raising it. There are two modes: One is the levying of taxes in some form under the various generic heads used in the clause, "taxes, duties, imposts, and excises," and the other is the borrowing of money. Most certainly the making of these notes a tender upon debts is not levying taxes, duties, imposts, or excises. Then what is it, for it is a money measure? It is in substance borrowing money. * * *

This operation is not anything like as honest or honorable as a forced loan. If I go for the Government to my colleague and say to him, "I understand you have $1,000 deposited in bank; the Government are in absolute want and we will have it; you understand we must have it; we shall take it, and here is our certificate for the amount; if we are ever able, we will pay you." There is some kind of decency in that kind of robbery; but suppose, instead of that, the Government furnishes me with some of this paper money; I get it at a discount, and I go and pay it over to Mr. Foote upon my debt due to him, and cheat him out of $300; nobody on the face of the earth is ever bound to pay him anything. I should like to know which is the more decent, which is the more just, which is the more honest of these two? If you make a thing worse than absolute, direct robbery, I think you have got it about bad enough in this tender clause.

[Timothy O. Howe, of Wisconsin.]

The Senator from Vermont [Mr. Collamer] has argued with great force and plausibility that the making of these notes a legal tender is unconstitutional, because it is unjust and inequitable. Assuming that the notes of the Government will be depreciated to half their nominal value, he proves conclusively that it would be grossly unjust to enable one who had purchased upon credit when gold and silver were the only legal currency to discharge his debt in a paper worth but 50 per cent as much as specie is. The Constitution, he reminds us, was framed "to establish justice." This, he rightly concludes, is not justice, and therefore he argues the

Constitution will not sanction it. I have not been able to recognize the conclusiveness of this reasoning, and I oppose to it these considerations:

1. Making a tender for a debt does not discharge it. It only stops the accruing of interest upon it. Any creditor who is tendered the notes of his Government if he has no debts of his own to pay, and can not lend them to one who has, and will not lend them to his Government in exchange for its interest-paying stocks, may retain his security until the notes appreciate or coin is again recognized as the legal currency.

2. There is no probability that a currency based upon the resources of a great nation, the whole of which will be demanded once in each year for payment of dues to the Government, and which may be used any time in payment of private dues so long as any private dues exist, and may be loaned to the nation upon interest, even after every individual in the nation has ceased to borrow, will depreciate 50 per cent, or even 5 per cent. No such paper ever did depreciate, and none such, I venture to predict, ever will.

3. But even if it were certain that these notes would depreciate 50 or 75 per cent, it would by no means follow that Congress has not the authority to declare them a tender for debt. The power to degrade or depreciate the currency Congress undoubtedly has. It has that by the clearest terms of the Constitution. It has the power to "coin money and to regulate the value thereof." Those powers are unlimited. * * *

[Henry Wilson, of Massachusetts.]

If the amendment proposed by the Senator from Vermont (to strike out legal-tender clause) is adopted, I shall vote against the whole bill under any and all circumstances, for I conceive that it would be unjust to issue a currency of $150,000,000 of Government paper and impose it upon all persons in the employ of the Government, upon our soldiers in the field, and upon those who have made contracts to supply the armies of the Republic, and do nothing to protect the credit of that currency when in their hands, imposed upon them by our necessities. I should consider such a measure as that unjust, wickedly unjust; and I could not, and I would not, under any circumstances, be guilty of giving a vote of that character. If that amendment should be adopted, I hope every Senator in favor of the legal-tender clause will vote against the bill, and defeat it if possible. I think we owe it to the character of the Senate and the character of the country. * * *

Passing by the question of constitutional power and coming to it simply as a practical question, it is a contest between the brokers and jobbers and money changers on the one side and the people of the United States on the other. I venture to express the opinion that 99 of every 100 of the loyal people of the United States are for this legal-tender clause. I do not believe that there are 1,000 persons in the State I represent who are not in favor of it. The entire business community, with hardly a solitary exception, men who have trusted out in the country in commercial transactions their tens and hundreds of millions, are for the bill with this legal-tender clause. The people in sentiment approach unanimity upon this question. What is true of Massachusetts is, in my judgment, true to a considerable extent of New England, and true to some considerable extent of the Central States and the West. I believe that no measure that can be passed by the Congress of the United States, unless it be a bill to raise revenue to support the credit of the Government, will be received with so much joy as the passage of this bill with the legal-tender clause. On that question I entertain no shadow of doubt. If you pass this bill with the legal tender, the legal tender can not injuriously affect the credit of this currency you propose to circulate. No harm can certainly come of it. * * *

We are told that it will not do to interfere in these private transactions. My opinion is to-day that no class in this country have more interest in this legal-tender clause than the creditor class of the community. You will find that your manufacturers, your merchants, your men who have their hundreds of millions trusted out in all parts of the country, are for this measure, for it is their protection and their interest. You will find that the families of your soldiers, who are to receive a small pittance from the men who are fighting the battles of your country in the field, are in favor of stamping upon these notes the words "legal tender;" so that when that little pittance comes from the field to them, to support them at home, they can use it to pay their necessary debts, and support themselves without having to go through the process of broker shavings. I look upon this contest as a contest between the curbstone brokers, the Jew brokers, the money changers, and the men who speculate in stocks, and the productive, toiling men of the country. I believe the sentiment of the nation approaches unanimity in favor of this legal-tender clause.

[John Sherman, of Ohio.]

The motion of the Senator from Vermont now for the first time presents to the Senate the only question upon which the members of the Committee of Finance had any material difference of opinion, and that is, whether the notes provided for in this bill shall be made a legal tender in payment of public and private debts. * * * I agree that this measure can only be justified on the ground of necessity. I do believe there is a pressing necessity that these demand notes should be made a legal tender if we want to avoid the evils of a depreciated, dishonored paper currency. I do believe we have the constitutional power to pass such a provision, and that the public safety now demands its exercise. * * * It is easy to criticise this bill. I dislike to vote for it. I prefer gold to paper money; but there is no other resort. We must have money or a fractured Government. If Senators can show me how they can raise money except in the way proposed I will join them in denouncing paper money.

I listened with great attention to the remarks made by the Senator from Vermont, but when he got through I should have been glad to have him inform me—if we can not issue these demand notes, what shall we do? Shall we surrender the Government; shall we refuse to pay our soldiers; shall we refuse to pay our contractors? No; you have agreed to pay your debts in money. The chairman of the Committee on Finance gave us a very handsome lecture—a very able discourse upon the importance of preserving the public faith—and he desired to impress upon us—and did impress upon me—the necessity of not affecting the obligation of contracts. We must not in any emergency, under any stress of circumstances, affect the obligation of contracts between private individuals. Did that Senator overlook the first contract, the contract between the Government and the soldier, the Government and the men who feed and clothe your armies? We must pay the soldier in money; we must pay the contractor in money. There is a contract, an obligation between the contractor and the soldier and the Government, that must be observed.

The same obligation of good faith rests upon us to pay every dollar that is due from us to our own creditors, as well as not to impair the obligation of contracts between others. How can you do it? I have shown that you can not do it in gold; I have shown that you ought not to do it in the inflated paper money of the country; how else can you do it? There is no other way, except to issue to your creditor the note of the United States, in such form, with such sanctions, as will enable him to use it as money. If we can believe the testimony of others and the light of reason, the only way we can do this is by stamping them with the same national sanction with which you stamp your gold and silver coin. * * *

If you strike out this tender clause, you do it with the knowledge that these notes will fall dead upon the money market of the world; that they will be refused, as they are now refused by the banks; that they will be a subordinate, disgraced currency that will not pass from hand to hand; that they will have no legal sanction; that any man, whether a Jew broker or any other of the numerous kind of brokers described by the Senator from Massachusetts, may decline to receive them, and thus discredit the obligations of the Government. * * * After all, this is a mere temporary expedient. It is manifest that we must rely upon some other source of obtaining money. We dare not repeat this experiment a second time. * * *

[Edgar Cowan, of Pennsylvania.]

The power claimed for the Government by this bill subverts the Government itself, and makes it destroy that which it was instituted to protect and preserve. What has been its functions heretofore in its proper and harmonious play? And why are we so anxious to perpetuate and save it? Is it because it destroys credit and good faith among men, or is it because it has been almost wholly employed to assert and enforce them? Surely the latter; for at least four-fifths of its labors are performed in achieving what this bill proposes not to do. The Government struggles to make men stand upon their contracts; this bill proposes to discharge a certain class of men from their contracts upon part performance only.

Proceedings in courts are of two kinds: 1. Criminal proceedings, for the punishment of crime. 2. Civil proceedings, to indemnify against worngs and enforce contracts. I think the latter occupies four-fifths of the time of the courts, occupy them to compel the performance of contracts, and preserve the credit of society inviolate in all cases where the honesty of the contracting party is wanting to that end. This bill, however, would set them all to work, not to compel men to keep their faith, but to aid in breaking it.

I have said I was opposed to the plan in the bill, because it was without warrant under the Constitution. I would now say I would oppose it if it was free from that objection, because it is abhorrent to reason, justice, and all my notions of right.

* * * * * * *

I propose now to look for a moment at the effect claimed for this clause upon the notes themselves. It is said it will give them credit. I think the contrary effect will follow. It is a blow

aimed at them in the most vital part, and one better calculated than any other, since it comes from a friendly hand, to do them in this regard most injury. If one of them asserts on its face that it is $5, and that were really true, I should like to know how much truer it is after you have said to everybody, "You shall believe it whether you will or not." Not much, I think; but, on the other hand, the fair inference is in the mind of every man, however stupid, that you yourselves first doubted the validity of it; and that therefore you attempted to give it this quality of paying debts perforce, to compensate it for the lack of essential value. If it were good and valid all people would be glad to get it, as all are ever glad to get money, and the moment you attach to it this character of compulsion you alarm and irritate them, till, like the fat knight in the drama who was anxious to give reasons for his timidity and cowardice, they refuse because of the compulsion. He said if reasons were as plenty as blackberries he would not give one on compulsion. * * *

But it may be said this provision will keep the notes at par, and therefore no disturbance can take place; and this latter would be true if the first were. How is it? Most people have a notion that a note is good just in proportion as it is readily convertible into gold or silver; and I think this can not be supplied by any form of legislation hitherto discovered, and without this capacity in them the law will not help. But that, no doubt, can remain; the experiment has been tried, and with much more vigor than is contemplated here, with none but the most disastrous results. During the French Revolution the assignats issued by the government were backed in every possible shape and form, by every conceivable legal sanction to compel their circulation, still they sunk as rapidly as though they had been left to the operation of the natural law. Even the penalty of death imposed upon all who refused them did not help. God be praised, we have not come to that here yet. This bill does not provide that those who refuse their commodities in exchange for these notes shall incur penalties. How soon it may come none can tell, as it seems to follow in regular sequence.

One thing is certain, if it is not resorted to the people will protect themselves by abolishing all trust and requiring cash down. They may decide that their property is better to keep than to sell for Treasury notes unless they can, at the time of sale, be allowed to fix the true value of them. When that takes place, the value of credit itself as well as Treasury notes will begin to be better understood, and that which is now considered so potent by many will be found of little avail in a contest with the natural laws of trade and the true laws of money.

[James A. Bayard, of Delaware.]

I shall, however, pass over the constitutional argument. I really do not think, from anything I ever heard on the subject, that is worth an argument. The thing is to my mind so palpable a violation of the Federal Constitution that I doubt whether, in any court of justice in this country having a decent regard to its own respectability, you can possibly expect that this bill which you now pass will not, whenever the question is presented judicially, receive its condemnation as unconstitutional and void in this clause. * * *

It may be said that as long as these notes approximate to the value of the coin of the country, gold and silver, individuals, from feelings of patriotism or from any other cause, will be willing to use them as a currency while there is not a redundancy. That may be so, but after a while there will be a conflict, and there is one class of creditors that you can not expect to reach in that way, and that is the class of guardians, trustees, and executors, where men have to receive money in a fiduciary capacity. If they receive as money that which has not the value of money except by arbitrary legislation they may be made to account for it, not now, in a time of excitement, but two, four, ten, fifteen, or twenty years hence, depending upon the expiration of minority or upon the removal of coverture, if the cestui que trust is now a femme couverte. Do you suppose they will not make the legal question in your courts when the tender is made to them of a depreciated currency as a payment of a debt due them as trustees? Of course they will; you can not expect to avoid it. * * * In my judgment, apart from the constitutional objection, which alone would be sufficient to control my vote, upon the ground that you have no power to insert this clause in any law, I can not vote for a bill which embodies it. It is impolitic and inexpedient as well as unconstitutional. It is a mere temporary expedient. It may give present inflation and present relief for the hour, and a very brief hour indeed, but it will be followed by a weakening of the resources of the Government, a depreciation of its credit, and it will produce nothing but disaster and ruin to the country.

[Charles Sumner, of Massachusetts.]

It is difficult to escape the conclusion that if Congress is empowered to issue Treasury notes it may affix to these notes such character as shall seem best and proper, declaring the conditions of their circulation and the dues for which they shall be received. Grant the first power, and the rest must follow. Careful you will be in the exercise of this power; but if you choose to take the responsibility, I do not see what check can be found in the Constitution. * * * I declare that the present proposition, when examined carefully, seems too much like bad faith. I say it seems; I would not speak too strongly. Is there not bad faith toward creditors who are compelled to receive what is due to them in a depreciated currency? Is there not bad faith toward all abroad, who, putting trust in our integrity, national and personal, have sent their money to this country in gold or its equivalent? And, surely, just in proportion as this is so, you can not doubt that we shall suffer alike in character and resources; for what resource is greater to a nation or to an individual than a character for integrity. * * *

Is it necessary to incur all the unquestionable evils of inconvertible paper, forced into circulation by an act of Congress, to suffer the stain upon our national faith, to bear the stigma of a seeming repudiation, to lose for the present that credit which in itself is a treasury, and to teach debtors everywhere that contracts may be varied at the will of the stronger? Surely there is much in these inquiries which may make us pause. If our country were poor or feeble, without population and without resources; if it were already drained by a long war; if the enemy had succeeded in depriving us of the means of livelihood, then we should not even pause. But our country is rich and powerful, with a numerous population, busy, honest, and determined, and with unparalleled resources of all kinds—agricultural, mineral, industrial, and commercial. It is yet undrained by the war in which we are engaged, nor has the enemy succeeded in depriving us of any of the means of livelihood. It is hard, very hard, to think that such a country, so powerful, so rich, and so beloved, should be compelled to adopt the policy of even questionable propriety.

On the amendment to strike out the legal-tender clause the vote stood 22 nays to 17 yeas. The amendment was therefore rejected. Some amendments were made to the bill, and after a short speech by Senator James A. Pearce, of Maryland, against the bill, a vote was taken and passed, 30 yeas to 7 nays. The vote in detail was as follows:

Yeas—Anthony, Rhode Island; Chandler, Michigan; Clark, New Hampshire; Davis, Kentucky; Dickson, Connecticut; Doolittle, Wisconsin; Fessenden, Maine; Foote, Vermont; Foster, Connecticut; Grimes, Iowa; Hale, New Hampshire; Harlan, Iowa; Harris, New York; Henderson, Missouri; Howard, Michigan; Howe, Wisconsin; Lane, Indiana; Latham, California; McDougal, California; Morrill, Maine; Pomeroy, Kansas; Rice, Minnesota; Sherman, Ohio; Sumner, Massachusetts; Teneyck, New Jersey; Trumbull, Illinois; Wade, Ohio; Wilkinson, Minnesota; Wilson, Massachusetts, and Wilson, Missouri.

Nays—Collamer, Vermont; Cowan, Pennsylvania; Kennedy, Maryland; King, New York; Pearce, Maryland; Powell, Kentucky; Salisbury, Delaware.

This measure was approved by the President February 25, 1862. A second issue of $150,000,000 in Treasury notes was authorized by law, July 11, 1862, and a third issue of $150,000,000 was authorized March 3, 1863. Thus, within a period of twelve months notes were authorized to the amount of $450,000.000. The arguments in favor of the second and third issues added nothing to those advanced on the first issue.

APPENDIX S.

[From Sound Currency, December, 1901.]

TWENTY YEARS OF BANK CURRENCY BASED ON GENERAL COMMERCIAL ASSETS.[a]

[By L. Carroll Root.]

Provision for the issue of bank notes without the deposit of bonds as security has been the fundamental idea in most of the recent proposals for a reform of our banking laws. It is very generally recognized that such a currency would be more responsive to commercial needs than is our present national-bank currency. Most of the criticisms which have been brought against it relate to its supposed insecurity; and advocates of the proposed change have been asked to cite instances of the successful operation of such a system under conditions analogous to those prevailing in the United States.

A study of banking history does not furnish many examples of bank-note currency which would be generally regarded as instructive for comparison with the present situation in the United States. It is true that the Bank of France and the Reichsbank of Germany issue notes secured, like their other liabilities, only by their general assets, and that neither of these institutions deposits bonds or offers other special security to noteholders. Both these banks, however, are large institutions, and are more or less subject to state control, and can therefore scarcely be cited as precedents for the thousands of independent banks of the United States.

Again, the 6 banks of Ireland, the 10 Scotch banks. and the 35

[a] I wish to express here my indebtedness to Prof. W. M. Burke and Mr. H. Parker Willis for their valuable cooperation in the preparation of this article.—L. C. R.

Canadian banks issue notes without bond security, But it is objected by the more critical that even in the case of these banks a comparison could scarcely be fairly instituted with the United States. For, in each of the countries referred to, the banking system consists of a few large institutions, with numerous branches, instead of a large number of independent banks.

It appears, then, that the investigator is limited quite narrowly to our own country in the search for examples of banking systems operating under conditions so similar to those which now exist here as to be available as analogous comparisons.

Nowhere, probably, in the whole range of the banking history of the United States can be found a more fruitful subject of study than the currency issued by the State banks of New England in the last two decades before the civil war. It is admitted by all that this currency was elastic and adaptable to commercial needs—consequences which followed from the fact that it was based upon the general commercial assets of the issuing banks.

The relative success attending the New England currency system is particularly instructive because of the similarity between the conditions under which it operated and those which obtain to-day throughout the greater part of the territory covered by the national banking system.

(1) The first important point to be noted in the banking history of these twenty years is the number of the banks engaged in business. At the opening of the period, in 1840, they numbered some 300, and at its close, over 500. Compared with population or with volume of business, this number is large. The population of New England varied, between 1840 and 1860, from 2,200,000 to 3,150,000, from which it appears that there was in operation one bank for every 6,000 or 8,000 inhabitants. Proportionately this is a much larger number than exist at the present day, when the total number of national and State banks and trust companies in the New England States does not average more than one institution to each 7,000 of population.

(2) Secondly, it should be observed that the banks of New England from 1840–1860 were for the most part of low capitalization. Of the 300 banks in existence in 1840, 159 did not possess capitals in excess of $100,000. Taking New England as a whole, the average bank capital was not more than $160,000 outside of Boston, and including that city not more than $206,000.

(3) The territorial distribution of the banks is worthy of attention. They were widely scattered throughout the whole area of the six New England States and were subject to but slight supervision or control.

The following table indicates the distribution of the New England banks, according to size, about 1840:

	$50,000 or less.		Over $50,000 and less than $100,000.		$100,000.		Over $100,000 and less than $300,000.		$300,000 or over.		Total.	
	Number.	Amount.	Number.	Amount.	Number.	Amount.	Number.	Amount.	Number.	Amount.	Number.	Amount.
Maine (January, 1841)	22	$1,099,000	6	$445,000	11	$1,100,000	6	$1,027,500	2	$700,000	47	$4,371,500
New Hampshire (June, 1840)	2	100,000	3	185,000	16	1,600,000	5	652,508	1	300,000	27	2,837,508
Vermont (October, 1839)	6	280,000	8	562,770	2	200,000	2	255,000			18	1,297,770
Massachusetts (October, 1840)					39	3,900,000	42	7,740,000	34	22,110,000	115	33,750,000
Rhode Island (December, 1840)	15	601,480	14	1,006,510	6	600,000	14	2,218,950	13	5,548,275	62	9,975,215
Connecticut (March, 1840)	1	40,000	7	479,580	1	100,000	12	2,233,115	10	6,025,550	31	8,878,245
Total	[a]46	2,120,480	38	2,678,860	75	7,500,000	81	14,147,073	60	34,683,825	300	61,110,238

[a] Of these 46 banks, 7 are of less than $40,000 capital, 3 of them being $25,000 or less.

Statement showing condition of banks in the six New England States for the years 1840–1860, as near to January 1 in each year as may be.

Year.	Number of banks.	Capital.	Circulation.	Deposits.	Due to other banks.[a]	Loans and discounts.	Due from other banks.	Specie.	Notes of other banks.
1840	306	$62,212,311	$16,461,947	$7,943,127	$3,174,180	$80,832,718	$5,883,718	$3,270,838	$2,367,809
1841	299	60,805,718	17,406,407	10,783,948	4,908,263	81,584,545	7,810,599	4,357,311	2,963,410
1842	290	59,542,546	18,106,582	10,340,173	5,215,637	81,769,111	6,999,410	4,353,604	3,136,251
1843	288	58,532,793	14,827,256	9,131,070	4,017,875	76,257,474	5,692,143	3,872,914	2,677,467
1844	270	56,113,451	19,406,979	15,143,932	9,414,703	75,774,234	12,746,274	8,597,775	3,184,919
1845	267	54,548,453	23,362,491	17,532,915	5,956,697	83,802,157	9,408,723	5,789,888	3,376,875
1846	266	55,233,762	26,316,986	17,231,601	6,137,670	89,492,708	8,996,953	4,574,711	4,044,205

[a] Exclusive of New Hampshire.

From this survey of banking conditions in New England it will be seen that the banks of that region during the period selected for study may very properly be compared with those of the national banking system as it exists to-day. There are present in both cases essentially the same characteristics—wide and uneven distribution of institutions, independence of banks, relatively small capitalization, comparative freedom from Government control. The main difference lies in the fact that in New England these conditions were much intensified and appeared in extremer forms. If anything, therefore, the conditions for successful banking without loss on notes were much less favorable under the New England than they would be under the national-bank system. Consequently, if it can be shown that the so-called New England system was a success and that the losses incurred under it were inconsiderable, an example will be furnished of a relatively safe currency, secured by general assets, issued successfully under American conditions, and there will be good ground for a confident prediction that the history of New England bank currency might be repeated under some system of banking not dependent upon bond deposits for security.

This study of the banking experience of New England during the twenty years before the civil war, therefore, will deal mainly with the character and security of the note currency. The failures which occurred during the period under investigation will be enumerated, the circumstances of each case presented, and an attempt made to ascertain the loss which fell upon the note holders.

FEATURES OF THE NEW ENGLAND BANKING SYSTEM.

At the outset it should be clearly understood that the New England banking system, although in principle and nature a single system, was not homogeneous or uniform. No general act under which charters might be granted to all those complying with specified conditions existed. It was necessary to obtain a special charter in each individual case, although this was usually accomplished without difficulty.

While, however, the charters, as will be seen at a later point, differed much in detail, they were similar and uniform in the important fact that they permitted the issue of note currency without special security of any sort.[a] In most of the States the note holder did not have even a prior lien upon assets. All claims against the property of broken banks stood upon a footing of

[a] In Vermont certain banks were chartered under a safety-fund act passed in 1831. Each bank was required to pay into the State treasury 4½ per cent upon the amount of its capital stock. This fund was to be kept intact by assessments on the banks, but such assessments should not exceed three-fourths of 1 per cent in one year. Not more than half the banks of Vermont, however, ever came within the scope of the safety-fund act, and the act itself was early superseded by other measures.

equality, and note holders were not preferred to depositors and other creditors.[a]

Finally, it deserves to be pointed out that the note issue was large in 1840, and that it increased proportionately faster than the number and capitalization of the banks, growing from $16,461,947 in 1840 to $44,653,095 in 1860.

The systematic character of New England banking as a whole, however, extended no further than to the mere plan upon which the notes were issued. There was no uniformity in any of the actual laws governing banks, either in regard to the relation between circulation and capital, stockholders' liability, or other elements of the system.

RELATION BETWEEN CIRCULATION AND CAPITAL.

The maximum limit to circulation was, in the early days of the New England banks, established by the State legislatures in the case of each individual bank and varied widely not only from from State to State, but also among the different charters in the same State. The differences between charters granted in the same State had, however, for the most part, been done away with before 1840, and between 1840 and 1860 the relation between circulation and capital was fixed in the New England States as represented in the annexed table:

Massachusetts, per cent of capital	125
Vermont, after 1840, per cent of capital	200
New Hampshire, per cent of capital, less loans on pledge of the bank's stock	100
Maine, to 1846:	
Banks with a capital of $50,000 or less, per cent of capital	100
Banks with a capital of from $50,000 to $150,000, per cent of capital	75
Banks with a capital of more than $150,000, per cent of capital	66⅔
Maine, after 1846, per cent of capital, plus specie held	50
Connecticut:	
Before 1855, per cent of capital	150
1855-1858, per cent of capital	125
After 1858, per cent of capital	75
Rhode Island:	
Banks with capital of $50,000 or less, per cent of capital	75
Banks with capital of $50,000 to $120,000, per cent of capital	65
Banks with capital of $400,000 to $500,000, per cent of capital	20
Rhode Island, after 1859, per cent of capital	65

REDEMPTION SYSTEM.

It might seem that variations of this sort would result in great irregularity in the amount of issues in different States, and that in consequence the bank notes in some States might differ radically in the matter of security from those issued in other States. Nevertheless, this did not prove to be the case. As early as 1826 the banks of New England entered into arrangements with the Suffolk Bank of Boston, whereby the Suffolk virtually acted as a clearing house for the notes of all New England banks. It was evidently directly to the interest of each bank to maintain as large an outstanding volume of notes as it could legitimately do. Hence it was the effort of every bank, so far as possible, to pay out its own notes in preference to those of other institutions which might come into its possession.

The notes of its rival were, of course, sent on to Boston for redemption, and this mode of competition for business resulted in an extremely active retirement and reissue of currency. Not less than one-eighth, probably, of the entire volume of note currency in New England passed through the Suffolk Bank each week.[b] Every bank met its own weekly redemptions, so far as possible, by the use of the notes of other banks which had accumulated in the course of the week's business, and thus a regular outflow and inflow was maintained.

This feature of the system affords a most instructive lesson, inasmuch as it shows that it was the very freedom enjoyed in the issue of notes which rendered redemption active; while, on the other hand, the redemption system completely thwarted any efforts on the part of banks to increase their circulation unduly. By regular redemption, they were compelled, if they wished to continue in business, to limit their issues to the amount corresponding to their actual bona fide requirements. These, on account of the numbers of the banks and the consequent competition for customers, were relatively low. The legislative restriction upon circulation, therefore, was ordinarily so much higher than the amount of notes which could be kept outstanding as in itself to have little effect in limiting circulation. The real limitation was that imposed by the necessity of meeting the constant demands for current redemption.

It is true that in some few instances a special effort was made to circulate notes in the Western States, where they would not readily be presented for redemption. These cases, however, were not numerous, and where banks exceeded the legal limit of circulation the legal penalty was enforced. How generally it held true that the circulation of banks was far below the permitted maximum may be seen from the accompanying table, in which the capital and circulation of all New England banks are compared with the permitted maximum. From this comparison it appears that in none of the representative years taken was the aggregate circulation more than 50 per cent of what might have been issued had commercial conditions been such as to call for the maximum circulation. In 1840 the percentage of actual to permitted circulation was about 23 per cent; in 1850, 40 per cent, and in 1860, 36 per cent.

Actual circulation compared with circulation permitted.[a]

State.	Number of banks.	Capital.	Actual circulation.	Circulation permitted.
1840.				
Massachusetts	115	$33,750,000	$9,112,882	$42,187,000
Rhode Island	62	9,880,500	1,719,230	5,000,000
Connecticut	31	8,806,204	2,325,589	13,209,000

Vermont	44	3,872,642	3,784,673	7,745,000
Total	506	125,315,148	47,539,877	131,310,000

[a] Report of the Monetary Commission, page 306.

While this redemption system was not legally compulsory, it was practically so, for whenever country banks refused to enter into the Suffolk redemption system they soon found that their notes did not circulate outside their own immediate vicinity. It, therefore, became necessary, after the establishment of the Suffolk Bank with its central redemption system, that country banks which wished to enjoy their proportionate share of circulation should arrange for the redemption of their notes in Boston, though it was by no means an evidence of insolvency when banks refused to enter the Suffolk system, as they were legally bound to redeem only over their own counters.

STOCKHOLDERS' LIABILITY.

Useful as was the actual working of the current redemption system enforced by the Suffolk Bank and its associates, it of course afforded no remedy to creditors of broken banks. It was, in short, precautionary and not remedial. Later banking experience suggests the necessity for some special safeguards to creditors. These, however, are found in New England only in fragmentary and incomplete form during the period now under consideration.

As late as 1849 Massachusetts, whose bank currency was soundest, made the stockholders liable only in case of proven fraud or mismanagement or upon the expiration of a charter, although in the year mentioned the provision for stockholders' liability was extended to all cases of failure irrespective of fraud or mismanagement. Maine, too, had only a law similar to that prevailing in Massachusetts prior to 1849, with the additional provision that in case of the expiration of a charter liability should be limited to two years.

Until the passage of the late law in Massachusetts just referred to it was only in Rhode Island and New Hampshire that an unlimited liability was imposed upon bank stockholders. This was effected in Rhode Island by the act of 1833, which, however, added the limitation "provided that the corporation be first sued and the corporate property be first exhausted in payment of the debts of the corporation." Unlimited liability did not make its appearance in New Hampshire until 1846.

Vermont and Connecticut laid the responsibility for redemption upon the bank officers. In the former State directors were made liable for the debts of their bank should excessive issues take place under their administration. Each director, too, was obliged to give a satisfactory bond, usually $8,000, as a guaranty

[a] In Connecticut the note holder had a first lien on the assets for notes of a smaller denomination than $100. Rhode Island enacted a law in 1837 giving note holders a prior claim on assets.

[b] In some cases the redemption was even more rapid than this. Note, for example, the following from the report of the Connecticut Bank commissioners for 1837:

"We have taken pains to inquire at each bank the average period of the circulation of bills, and find that so rapidly do their bills circulate and return for redemption that, for the six months prior to the 1st of April last, about two-thirds of the bills of the Connecticut banks in circulation were redeemed once in thirty days, and the other third within about forty-five days from the time they were issued."

of the faithful performance of his duties. In Connecticut the directors and cashier were held liable as joint and several debtors should the debts of the institution exceed the amount specified in the charter. No other liability of stockholders seems to have existed.

THE GENERAL CHARACTER OF THE CURRENCY SYSTEM.

The currency system of New England, as it developed along these lines, justly claimed the place of preeminence among the currency systems of the United States.

Because it was based on general commercial assets it was fully responsive to commercial needs. In the rural sections, where the habits of the people called for the employment of a note currency of larger proportional volume than in the cities, we find the local issue of bank notes proportionately greater. For example, in 1855 the banks of the distinctively rural States of New Hampshire and Vermont, with an aggregate capital of $8,150,000, were issuing $7,300,000 of bank notes, while the banks of Boston alone, with $32,700,000 capital, were issuing only $7,500,000 of notes, but were supplementing this by the use of some $15,000,000 of bank deposits—a form of currency even then coming to occupy the first place as bank currency in the larger cities.

LOWER INTEREST RATES.

The result of this extensive use of bank credit in the form of notes was practically to give to the citizens of those States the use of so much additional capital, and thus, by making capital more abundant, to lower the rates of interest. This tendency of the system was so marked as to draw from the Connecticut Bank commissioners in their report for 1844 the comment that—

"It has been impossible for the banks of discount to find use for all their means in discounting good paper; and some having the largest capitals have reduced the rate of discount, in a few instances, to 5, 4, and even 3 per cent."

That this must have been the effect will be apparent by making a single comparison between the facilities for loaning which the system of note issue, based upon general commercial assets, afforded and the facilities which the same banks might have given if their notes had been based upon Government bonds, as at present required.

To use the illustration cited above, the condition of the banks of Vermont and New Hampshire in 1855 was approximately as represented by the following balance sheet:

ASSETS.		LIABILITIES.	
Loans and discounts	$14,750,000	Capital	$8,150,000
Bonds	250,000	Surplus	750,000
Specie	450,000	Circulation	7,300,000
Notes of other banks	300,000	Deposits	1,450,000
Balances due from banks	1,900,000		
Total	17,650,000	Total	17,650,000

To enable these banks to earn 6 per cent upon their capital stock, net earnings of $489,000 would have been required. If the expenses were half as much more, the gross earnings would have had to be $734,000 to permit a 6 per cent dividend on the capital. Assuming that the bonds paid no more than 2 per cent (the present income from Government bonds), the bonds they owned would have furnished only $5,000 of this, leaving $729,000 to be supplied by the interest on the loans, thus necessitating an average interest rate of only 4.8 per cent.

If, on the other hand, the banks had been obliged to invest in an amount of United States bonds equal to their circulation, as the national banks must now do, their condition would have been as follows:

ASSETS.		LIABILITIES.	
Loans and discounts	$7,700,000	Capital	$8,150,000
Bonds	7,300,000	Surplus	750,000
Specie	450,000	Circulation	7,300,000
Notes of other banks	300,000	Deposits	1,450,000
Balances due from banks	1,900,000		
Total	17,650,000	Total	17,650,000

Assuming that the expenses were the same, the amount required to earn a 6 per cent dividend would have been $734,000, as in the other case. In this instance, however, since $7,300,000 is invested in United States bonds, where the net income is only 2 per cent, the amount to be earned by the loans is $588,000, or over 7½ per cent upon the $7,700,000 of loans.

In other words, if our present system of bond-secured currency had been substituted for the system of currency based on general assets which they then had, the inhabitants of these States would have found that the amount of capital seeking investment in local loans was only about half as great as before, while the rate of interest was greatly increased.

UNIVERSAL SATISFACTION WITH THE SYSTEM.

From this comparison it will be easy to see why the borrowing element of the population (and this includes the agricultural interests as well as the mercantile, commercial, and manufacturing interests) were so well satisfied with the New England experience with a system of bank currency based upon general commercial assets. But this feeling of satisfaction with the currency was not confined to borrowers alone, or to any one class; it was almost universal.

Perhaps the general sentiment in this regard can not be better indicated than by citing the following from official reports—the most competent contemporary authorities:

"The currency of this State is of the first order, and can not be improved, being equal to gold and silver. This is strong language, we admit, yet perfectly true; for every billholder can, on demand, convert his bills into coin.

"The banking system in New England (though fraudulent practices with their evil consequences, in a few instances, have been witnessed and can not, perhaps, be effectually guarded against) stands undeniably above any other in the United States; and the world can scarcely show a better system. Stockholders and the public find in the New England banks a safe guaranty for their future interests by referring to the past.

"Were the system perfect it would be needless to discuss the subject; but general opinion is sustained by facts that abuses have been suffered; and the question is, How shall their evils be corrected? In the opinion of your commissioners one important step is that of sustaining and giving greater efficacy to the arrangement for redemption, now known as 'the Suffolk Bank system.' This method has been salutary in its influence, and has tended greatly to produce a healthy state in all our Connecticut and New England banks. By some banks, however, this mode is considered oppressive, and, no doubt, contributions for its support are unduly apportioned. Although imperfect, the system should not be abandoned till a better is provided. The extent of failures that would have occurred, with their disastrous results, but for this conservative and regulating power may be judged of somewhat by contemplating the present state of monetary affairs throughout the South and West. * * *

"Any estate in the southwest part of Connecticut is now given for the bank issues of the opposite point with as much safety and readiness as though it was located at the door of the receiver, the whole being at par at the Suffolk Bank, consequently with every bank redeeming there." (Connecticut Bank Commissioners' Report, 1841.)

"The commissioners, from the evidence they have, can say with entire confidence that all the banks in this State are in a sound and healthy condition, and the currency is of the first order; and when we take into consideration the almost unexampled embarrassed condition of the monetary concerns of this country, growing out of the great revulsion of 1836–37, the immense amount of worthless paper put afloat by chimerical speculation, we may well say that our banks have done well to escape that general insolvency that has visited many of these institutions in several of our sister States." (Connecticut Bank Commissioners' Report, 1845.)

"It may be claimed that by increasing the banking capital greater inducements will be held out for the people to engage in improvident speculations and investments, and greatly endanger the sound and safe operations of business. If there was no check upon circulation there might be some danger. But the frequent redemptions at the Suffolk Bank, and the rapid communications between different parts of the country, will prevent any greater circulation than the natural business wants of the country will sustain. The moment any banks in New England are unable to meet their redemptions at that institution their bills are thrown out, their credit is doubted, and they can do but very little business until they make their credit good again. Indeed, this system of par redemption seems to be a most perfect regulator upon all the New England banks. It would seem somewhat surprising that something has not been adopted in other parts of the country that should produce the same beneficial results. If there was, there would be but little necessity for brokers. The bank note of Ohio might be as good in New York, Boston, or Philadelphia as at the counter from where it issued." (Connecticut Bank Commissioners' Report, 1848.)

"We believe there is not a more sound and safe currency in existence than that furnished by the banks in this State. We know of no better system of banking than ours." (Connecticut Bank Commissioners' Report, 1849.)

"And first, we remark that the currency of the Commonwealth, so far as it depends upon its banking institutions, is in a sound and healthy condition. The banks are, in the main, carrying out the objects for which they were created with fidelity to the public and to stockholders." (Massachusetts Bank Commissioners' Report, 1851.)

"The failure of a bank is always to be regretted, but in this case [the Cochituate Bank] the public will be losers, if at all, to but a small amount. The fact is not a little gratifying that a failure of this kind has not before occurred in Massachusetts for

many years." (Massachusetts Bank Commissioners' Report, 1854.)

"Your commissioners can not refrain from remarking upon the very satisfactory condition presented by the banks of the Commonwealth after the severe commercial crisis through which the community has just passed. Although driven into the suspension of specie payments, through the action of foreign institutions, still they never for a moment lost the confidence of the community as to their soundness, nor did they fail, during the period of alarm, to furnish every accommodation to their customers which could justly be expected. In fact, some of our banks did not suspend at all, not even in form, and, with a large part of them, the suspension was merely nominal; they occurred, as a matter of precaution, in the action of other institutions; but in very few instances was specie positively refused, when called for; on the contrary, the supply appears to have been sufficient for the demand, and, as a general thing, all reasonable requirements were satisfied.

"That this confidence in the strength of our banking institutions was well founded, and also that their efforts in extending every possible aid to their customers were not ill-judged, is fully evinced by their prompt resumption of specie payments and by the comparatively small amount of overdue or suspended paper with which they were burdened. There was reason to apprehend large losses on such paper, but we have been gratified to find it, with few exceptions, so protected that very little is set down in the directors' estimate as even doubtful. We speak of those banks which have been visited by us, situated, for the most part, in the country.

"In this connection we would also remark that the amount of paper in the banks, issued by large manufacturing corporations which have suspended business, is far less than there was reason to fear. This paper is confined to a few institutions, and is not of an amount seriously to affect their soundness or to cripple their business.

"These results can not fail to inspire increased confidence in the banking system of the Commonwealth, as well as in the general ability, prudence, and sagacity which characterize its administration."—(Massachusetts Bank Commissioners' Report, 1858.)

"The banking institutions of the Commonwealth give satisfactory evidence of soundness, and ability to meet the constantly increasing demands of the community for a safe and reliable currency."—(Massachusetts Bank Commissioners' Report, 1859.)

"From a careful examination of the reports of other States, I have no hesitation in saying that the banks in Vermont will bear a favorable comparison with other institutions of the kind throughout the country; and, on review of the whole subject, we may justly flatter ourselves that our banks are as prudently conducted, as sound in their condition, and afford as great facilities to our citizens as those of any other State, and that no portion of the Union enjoys so good a currency as the New England States." * * *

"The bills of any country bank, redeemed at par in any commercial city, will always be current throughout the extent of region whose business channels flow to that city. Hence New England money is worth more in the cities of New York and Philadelphia than the bills of their own country banks. Vermont bills have uniformly borne a premium in Eastern cities without loss, while bills of their own States are at a heavy discount." (Vermont Bank Commission's Report, 1852.)

"Our banks have accomplished their great object of furnishing a sound currency—sound, equal, and uniform, in consequence of its redemption at par, in the great central market of the country (Boston). The bills furnish a most convenient instrument for exchanging the various commodities of commerce and agriculture, and go into wide circulation. * * * The system is admirable, and is, perhaps, without a parallel in the world; it leaves us nothing to desire, so far as an instrument of commerce is needed, within the circle of the Eastern States." (Maine Bank Commissioners' Report, 1842.)

"For the last eight or ten years the value of our paper currency has been more uniform than during any similar period since the foundation of our Government, and there has consequently been greater security in all business operations. This fact goes far to show that our banking system has improved, and that our banks are well managed." (Maine, Annual Report of Governor, May, 1850.)

"The 'Suffolk system,' though not recognized in our banking law, has proved to be the great safeguard to the public. Whatever objections may exist to this 'system' in theory, its practical operation is to keep the circulation of our banks within the bounds of safety. No sound bank can have any well-founded reason for refusing to redeem its bills in Boston, and a bank that is not sound can not long do business under that system and ceases to be in good credit when it is 'thrown out at the Suffolk.'" (Maine Bank Commissioners' Report, December 31, 1857.)

"The Suffolk system (if we may so call that system which has obtained throughout New England), the distinctive characteristic of which was a central point of redemption, has given to New England as sound a currency as was to be found in any part of our country. Bank failures at the North have been rare, and the losses to stockholders or bill holders, when compared with the amount of capital invested, have been very trifling. It is by no means wonderful that a system which has stood the test of time and stuck its roots so deep as to have become incorporated with and formed a part of our banking system should be abandoned with hesitation for one which is new and untried." (Maine Bank Commissioners' Report, 1865.)

"If, during the last twenty years, the period during which the charters now about to expire have existed, a sound currency has been secured, is it the part of wisdom to change the laws and overturn the arrangements by which this result has been produced? The charters of the banks have been renewed. If the laws by which they are constituted the agents of the people to provide a currency, and by which their faithfulness in the discharge of the duties of such agency is secured, remain unchanged, there is every reason to believe that the currency of Massachusetts will be for the next twenty years what it has been for the twenty years past, as perfect as any in existence—as perfect as in the nature of things it can be. No reasonable man, no practical man, no man who is not bound hand and foot in the fetters of mere theory can desire for the people a currency better adapted to meet all the circumstances of a business community than that which has been furnished by the banks of Massachusetts for the last quarter of a century." (James B. Congdon, cashier Merchants' Bank, New Bedford, in memorial to governor of Massachusetts, 1851.)[a]

"The anomalous feature of the case is that the well-secured and bond-protected bank issues of New York are at a greater discount at this point than the apparently unsecured circulation of New England, including places hundreds of miles off and inaccessible, in a measure, for compulsory redemption. * * *

"We said that the Massachusetts currency was apparently unsecured. In reality their bank paper is well secured. The experience of the last fifteen years has demonstrated that the losses from bank issues in the State of New York are four or five times greater than in Massachusetts. The system of the latter is better than our own." (New York Courier and Enquirer, 1854.[b])

In conclusion, the following quotation from a Massachusetts report of 1865 may be permissible, voicing, as it does, sentiments then common to all New England:

"The State parts with these objects of her care and solicitude with many regrets, but with a just pride in their career inspired by the belief that their capital has been highly instrumental in promoting the prosperity of the State, and that they have furnished as good a paper currency, based on individual credit, as any part of the country has ever enjoyed."

APPENDIX T.

STATE BANKING BEFORE THE CIVIL WAR.

[By H. Parker Hollis.]

New England.—Massachusetts, Connecticut, Maine, Vermont, New Hampshire.
Western States.—Indiana, Ohio, Iowa, Wisconsin, Michigan, Illinois.
Southern States.—Louisiana, Kentucky, Tennessee, Mississippi, Virginia, South Carolina, North Carolina, Maryland, Alabama.
Eastern States.—New York, Pennsylvania.

MASSACHUSETTS.

The experience of Massachusetts with a banking system based on commercial assets has become classical. Various banks were established up to 1799, when notes below $5 were prohibited temporarily and the establishment of unincorporated banks was forbidden. In 1803 banks were required to make semiannual returns of condition, and in June 1805, 16 institutions were in operation with an authorized capital of $5,760,000, of which $5,460,000 had been paid in. Only one more bank was chartered from that time until 1811. The currency was inferior, very small notes were in circulation, and specie had nearly disappeared.

In Boston the discount on New England bank notes ranged from 10 to 60 per cent, and in order to overcome the depreciation the legislature in 1810 fixed a penalty of 2 per cent a month, payable by the bank to the note holder, for failure or refusal to redeem notes on presentation. Twenty-one Massachusetts banks existed in 1814. The restrictive legislation and the fact that in 1811 the franchises of practically all the banks had been recast, reducing the amount of circulating notes to 150 per cent of capital, prevented any suspension in Massachusetts, and the maintenance of specie payments enabled the banks to acquire a better standing than that enjoyed by those in other States which had

[b] Quoted in Bankers' Magazine, vol. 8, p. 747.

suspended. The total number chartered previous to January 1, 1825, was forty-nine, with a capital of $20,800,000. Nine had failed or discontinued business or had never organized. The actual number in operation was forty, with an authorized capital of $14,305,000, of which $13,300,000 had been paid in. In 1825 a further step toward banking control was taken by reducing the amount of the circulating notes to that of the capital.

Real control of the banks, however, began with the law of February 28, 1829, which was to apply to all banks thereafter organized and to those increasing their capital or extending their charters. The law required banks to have 50 per cent of their capital paid in in specie before beginning business. It prohibited loans to shareholders and limited the loans on stock pledges to 50 per cent of the capital. Notes were permitted to issue to 125 per cent of the capital, and debts due to or from any bank, exclusive of deposits, were limited to twice the amount of the capital. Still there were some defects in the banking system. Some banks pursued the plan afterwards followed by certain national banks of borrowing specie for a few days to the amount of half their authorized capital, getting it counted by the bank commissioners, and then returning it to lenders, its place being taken by the notes of the stockholders.

In consequence of the financial difficulties of 1837, a plan for regular official examinations of banks was developed and put into operation, while in 1843 the different institutions were prohibited from paying out over their counters any other notes than their own. Individuals were prohibited from holding more than one-half of the stock of any bank. No person could be the director of more than one bank. Neither debts or credits of any bank could exceed twice the capital stock paid in except for deposits and for debts due to and from other banks. No bank could pay out any note except its own or issue any note directly or indirectly except at its own office, or issue any notes with the understanding that they should be kept out a certain length of time. Banks were forbidden to borrow money to be repaid in anything except specie or their own notes. In case of failures note holders were to be paid first. Fifteen per cent of specie was to be held as a reserve against both circulation and deposit. Whenever any bank stopped payment stockholders were rendered individually liable in proportion to their stock for the redemption of the bank notes.

Thus by successive steps an elaborate system of restrictions on banking was developed. It should be noted, however, that all these restrictions related to the mode of conducting the business of the bank and not to the appropriation of a special kind of security to protect any particular part of the liabilities.

A new departure was taken in 1851, when a free banking law was enacted, under which about seven banks were organized. This system proceeded upon the general plan of the bond-secured New York system. The fact was that the original system of chartered banks had become so thoroughly developed and offered such satisfactory and trustworthy safeguards that no fears were entertained concerning the solvency of the circulating medium and the field was already so well occupied with sound and solvent banks that there was no room for the bond-secured system to get a foothold prior to the civil war.

One thing which should be taken account of in considering the success of New England banking is the system of redemption which was specially developed in these States. In 1818 the so-called Suffolk Bank had been chartered, and after 1826 it turned its attention to receiving and redeeming the notes issued by the New England banks. The directors saw that they could buy the notes of the country banks at a discount and make a profit by sending them home for redemption. This was purely a business matter, and the desire of benevolently sustaining the currency had no part in it. A sort of forced compact with the country banks was entered into by the Suffolk Bank, and the latter agreed to receive the notes of any country bank which would leave with it a permanent deposit of $5,000, together with such further sums as might be required to redeem such of its bills as were taken by the Suffolk.

The country bank was granted the privilege of receiving back its own bills at the same discount at which they had been taken by the Suffolk. Whenever banks would not deposit with the Suffolk, the latter sent home their notes for redemption at par in specie. Thus, out of the mere necessities of the case and the convenience of the business community, there grew up a satisfactory system of redemption under which the notes of banks were kept constantly redeemed at par without interference on the part of the Government. As the system finally developed six other banks associated themselves with the Suffolk Bank and jointly contributed a sum of $300,000 for the purpose of keeping currency constantly redeemed. All the country money received by any of these banks was sent to the Suffolk, and thus the system of redemption was thoroughly established. The amount of permanent deposit required by the Suffolk Bank was reduced to $2,000 as a minimum, and varied in amount with the amount of the capital of the depositing bank.

Banks were not required to maintain this deposit with the Suffolk in order to have that bank and its allied institutions receive their notes at par. What the Suffolk demanded was that they should redeem their notes at some convenient place and many of them consequently maintained a deposit in other Boston banks. The effect, however, was the same. In 1858 a so-called "Bank of Mutual Redemption" was chartered and succeeded in getting most of the business away from the Suffolk, concentrating its attention upon this general problem of redemption. The Suffolk withdrew from the business in November, 1858, leaving it all to the Bank of Mutual Redemption. The currency under this redemption system was undoubtedly the most flexible, soundest, and most satisfactory ever furnished in any part of the United States either before or after the organization of the national banking system and this, too, without any specially deposited security, but merely by virtue of two distinct features—first, a wise and explicit general banking law, and, second, a private method of redemption which was perfectly thorough and unfailing in its operation.

CONNECTICUT.

During the early history of Connecticut and as late as 1836, Connecticut banks issued currency secured only in the same way as all other liabilities. The early charters provided that notes might be issued to an aggregate amount not exceeding 50 per cent over and above the capital stock of the bank and the amount of its deposits. Practically, the issues never even approached the limit thus set. They always enjoyed a good repute and with the exception of one or two failures, the banks were left largely to themselves until 1836. Even in 1814, when a general suspension occurred throughout the country, the banks of Connecticut were able to maintain specie payments.

In 1836, an examination into the condition of the banks was ordered, and it turned out that thirty-one reporting institutions with a total capital of $8,679,307 were maintaining a circulation of $4,094,681, and were carrying deposits of $1,922,743. At the same time the specie on hand amounted to $426,290, while specie funds in New York amounted to $271,271. Balances due from other banks were $374,802 and deposits in other banks were $127,684. At the same time, the discounts of the combined institutions aggregated $13,361,928. The conclusion reached by the examining committee was that "the soundness and solvency of all the banks examined by us is in our judgment unquestionable." Thus, during the first period of banking in Connecticut, the issue of notes based upon commercial security resulted in a thoroughly safe and reliable currency without the intervention of any special deposit of bonds or other pledge.

The same satisfactory condition of the banks was maintained during the years from 1836 to 1842. During this period, a true bank currency was maintained in circulation, redemptions being rapid. The Connecticut banks adhered to the Suffolk system of redemption, and thus their bills were maintained at par, while the rate at which they returned to the issuing institutions was extremely high. During 1836 and 1837 they came back at the the rate of two-thirds of the whole circulation once in thirty days, and one-third once in forty-five days. After the Connecticut banks joined the Suffolk system the ratio of their circulation to their specie improved, and by 1840 stood at approximately 25 per cent. During the first fifty years of banking in Connecticut (ending with 1842) only two failures occurred, notwithstanding that the total number in the United States was about 200.

Business conditions throughout the country led to a period of general inflation during the years 1843 to 1847, but no serious difficulties were encountered in Connecticut, owing largely to the check imposed by the Suffolk system of redemption. In 1852 a demand for a general banking law culminated in the passage of legislation providing for the issue of currency against the deposit of specified public stocks to be made with the treasurer of the State. By 1855, 13 banks, with a capital of $2,948,169, had organized under the new law, while the chartered banks numbered 54, with a capital of $14,197,282. The panic of 1857 put the two systems to a test, but did not demonstrate any superiority on the part of banks organized under the new legislation. Suspension was general for a short time, but it was not long before specie payments were resumed, and the war found the bond-secured notes and the notes of the chartered banks enjoying full and substantially equal credit.

MAINE.

During the early history of Maine, before its organization as a separate State, banking was conducted on very much the same conditions as later in Massachusetts. Thus, the Portland Bank, chartered in 1799 by the general court of Massachusetts, had a capital of $100,000, with permission to increase to $300,000. No special safeguards concerning banking were then in force, and

these were only slowly developed down to 1819, some 12 or 14 banks in all being chartered. These institutions issued notes without special safeguards, redemption being slow. Twelve banks had issued about $581,466 of notes in 1814, and there was only a moderate amount of specie on hand. Yet redemptions had been fairly steady, for $730,561 of notes had been redeemed within six months prior to the returns collected in 1814.

There had been very few failures. From time to time, after the admission of Maine in 1820 as a separate State, restrictions were imposed upon the business of banking. A system of redemption was finally put into operation, the banks being compelled to join the Suffolk system in spite of great unwillingness to do so. The suspension of specie payments by the 55 Maine banks in 1837 was only temporary, and led to a careful revision of the banking law in 1841. Note holders, however, lost but little by the disturbed financial condition. In spite of a brief suspension in 1857, far the larger part of the banks maintained good credit, and when the national banking law was passed there were in the State 69 banks, with $8,008,000 of capital and $6,019,156 of circulation. The experience in Maine was thus substantially similar to that in Massachusetts and Connecticut, and enforced the conclusion that sound and solvent banking was possible without special safeguards for the security of notes by the pledge of a specific part of the bank's assets. It demonstrated conclusively that good banking in the State depended only upon a proper law, governing the general operations of the banks and the development of a satisfactory system of redemption.

VERMONT.

After an early experience with banks more or less unfortunate in character a number of institutions were chartered from 1817 to 1827 without any general law governing their organization. In the several charters they were generally required to pay their notes on demand, the latter being practically limited to about three times their capitalization. A general law was adopted in 1831, and under it all banks chartered in the future were required to contribute to a safety fund 4½ per cent of the amount of their capital stock in six annual installments. In case of failure of any banks, assessments not exceeding three-fourths of 1 per cent a year were to be made by the State treasurer upon the several banks until the fund was made up. No bank was to go into operation until at least one-half the capital was paid in. In 1840, some further regulations were adopted. One-half the capital was required to be paid in in gold or silver before the opening of business.

What amounted to another system of banking was organized in 1842 by the legislation of that date, which provided that banks thereafter chartered might be relieved from contributing to the safety fund if bonds of the directors guaranteeing that they would at all times pay and redeem notes issued by the bank should be executed. In such cases very stringent regulations concerning the payment of the whole of the capital, and concerning loans to directors, stockholders, and others, were introduced. Moreover, this act recognized the Suffolk system of redemption by requiring that a tax of 1 per cent per annum upon capital should be paid by those banks which should not "keep a sufficient deposit of funds in the city of Boston" for the purpose of redeeming their bills at par. About the same time the circulation of all banks was limited by law to twice their paid-up capital. Thus, by 1842, Vermont had practically developed a complete system of banking, and had recognized a regular method of redemption. Under this system of legislation scarcely any failures occurred, and a thoroughly satisfactory currency was supplied to the State.

A free banking act was adopted in 1851, under which banks were allowed to be chartered with capitals of not less than $50,000 and not more than $200,000. These banks could issue notes on a pledge of United States stocks or of specified State stocks deposited with the State treasury. Very few banks organized under this act, but while the law was in existence a considerable number accepted charters under the old legislation, because of the greater confidence shown by the public in those banks which were properly regulated as to their business, even though they had no specially pledged security for their circulation. Down to the time of the civil war the banks of Vermont continued to do business in a sound and satisfactory way, and even the panic of 1857 did not force them to suspend specie payments.

NEW HAMPSHIRE.

The first general control exercised over banking in New Hampshire is found in the act passed June 21, 1814, which required annual reports to be made by the banks. Between 1831 and 1840 various safeguards were added, such as the restriction of loans on pledge of capital stock, and the prohibition of the issue of notes above the amount of capital remaining after loans on stock had been deducted. The provisions were, however, rudimentary and the 21 banks which existed in 1831, and which grew to 26 in 1841, were left pretty generally to their own devices. Some four or five of them failed during these years, owing to reckless banking, but, by 1840, most of them had been driven into the Suffolk system of redemption, which forced them to take care of their notes and tended to keep them in a sound state. Several of them, however, failed during the commercial difficulties from 1837 to 1839, and, of a total number, which had at one time aggregated 28, the number of banks fell off to 17 in 1845.

By a revision of the banking laws in 1842 unchartered banks continued to be prohibited and notes were made payable in specie on demand. Notes below $1 were forbidden and circulation was limited to four-fifths of the capital stock. Failure to pay specie forfeited the charters. Quarterly reports of condition were required, and, in 1857, banks were prohibited from beginning business until their capital had been fully paid. Under the act of 1842, and with the aid of the Suffolk system of redemption, thoroughly sound banking was inaugurated in New Hampshire and continued to persist down to the civil war, no special bond or other security being ever required. The bank statements of the time show only a fair amount of specie on hand in proportion to circulation. Thus, in 1849, the banks held $155,707 in specie against $1,508,608 of notes oustanding. In 1869 they held $255,278, as against $3,271,183, but the main reason why the proportion of the specie was not larger was the extensive redemption of their notes through the Suffolk system and the fact that a considerable amount of their available resources took the form of deposits with other banks.

INDIANA.

The State Bank of Indiana was chartered by an act of the Indiana legislature which became a law on January 28, 1834. This law granted a charter, which created a system of banks to be known as the State Bank of Indiana. The institution was to discontinue active operations January 1, 1857, but might remain in existence for the purpose of winding up its affairs until January 1, 1859. It was to be composed of the State Bank and ten branches, but the ten branches were really for most purposes independent banks, subject to a certain control by the State Bank, and the latter was really nothing more than a board consisting of a president and four members chosen by the legislature, besides one member chosen by each of the ten branches, with restrictive and supervisory functions, but with little power of initiative. The State Bank was to keep an office in Indianapolis, but the banking powers granted were to be exercised "by and through her branches and not otherwise."

The board of directors could limit and control the discounts of any branch after they should reach one and one-fourth times the paid-in capital. For cause, they could suspend a branch, and even close it up entirely if its operations should endanger the interests of the other branches, or if, after one year, it did not pay a profit of 6 per cent on the paid-in capital. They could equalize the public deposits among the branches; they could examine each branch as often as they saw fit (and were required to do so at least once in six months); they could require reports from branches as often as they pleased, and at least monthly they could call on all the branches to make up any deficiency in the assets of an insolvent branch. They could regulate the elections for directors of the branches; they could regulate the dividends of the branches so far as to insure that the capital should not thereby be diminished and that a surplus fund of one-sixteenth the capital should be maintained; they were to keep the plates and print the notes for all the branches, the notes to be signed by the president of the State bank, and they were to fix the number of directors for each branch from ten to thirteen, of which number they were to appoint three.

The branches were to be otherwise free to conduct their business without control from the central board. Each branch was to elect its own board of directors, choose its own officers, and in general manage its own affairs. Whose notes to accept, what kind of security to demand, how much reserve to keep, what terms to exact were to be within the discretion of the local board. The State had a certain control over the bank and was a stockholder to the extent of one-half the capital. Stockholders were liable to the amount of their stock. The entire capital was to be in specie, but there was no compulsory reserve and no preferred claim on the part of note holders. At that time neither the safety fund nor the collateral security system of securing the notes had become familiar.

Specie payments were never to be suspended, under penalty of paying 12 per cent interest on the obligation. Dealing in merchandise or doing anything but a strictly banking business was prohibited; holding real estate, except what was needed in the conduct of the business or had been taken in satisfaction of a debt, was prohibited. No bank notes were to be issued of less denomination than $5. The notes were payable at the branch where they were issued, and were to be signed by the president of the State bank, and the cashier of the branch. Notes were not to exceed in amount twice the paid-in capital. Debts owing to the

bank as a whole were never to exceed twice the capital; debts due by the bank as a whole, exclusive of deposits, were not at any time to exceed the same amount, and debts due to or by any branch, exclusive of deposits, were never to exceed that amount except by permission of the State board.

Under these provisions the bank issued notes and held reserves, as follows:

Date.	Specie.	Circulation.
January 1, 1835	$751,083	$456,065
January 23, 1836	874,340	2,054,050
January 21, 1837	1,254,252	2,261,385
January 20, 1838	1,223,911	2,323,200
January 31, 1839	1,390,298	3,548,139
January 31, 1840	936,521	3,271,019
January 30, 1841	1,115,363	3,154,641
January 31, 1842	1,124,905	3,074,212
January 31, 1843	822,606	2,041,392
January 31, 1844	975,348	2,941,263
January 31, 1845	1,122,219	3,352,507
January 31, 1846	1,033,322	3,963,595
January 30, 1847	1,002,490	3,904,900
January 31, 1848	1,060,782	3,964,085
January 31, 1849	1,182,475	4,008,228
January 31, 1850	1,138,791	4,021,582
January 31, 1851	990,696	4,044,996

It thus appears that throughout the existence of the bank the reserve, although not large, was fairly safe. The percentage of reserve to immediate liabilities never fell below 20. This is less than city banks are now required to keep, but a fairer comparison is to be made with our country banks which are permitted a reserve as low as 15 per cent. Moreover, it would not be unfair to include in the reserves of the Bank of Indiana not merely specie, but at all events some portion of the notes of other banks of which several hundred thousand dollars were ordinarily on hand.

The bank suspended specie payments in 1837–38, resumed again in 1838, partly suspended once more in 1839–1842, and by order of the legislature resumed finally on June 15, 1842. These suspensions were not due, of course, to a bad state of affairs within the bank or to a deficiency of specie. They were the result of the general conditions of panic and depression all over the country, and suspension was merely a measure of prudence adopted upon the recommendation of the State board in order to keep the bank from losing the specie it had accumulated. How good was its real condition was shown by the report of the special examiner appointed by the legislature at the time of the final resumption in 1842. This report showed that despite the collapse of prices so general throughout the country, the condition of affairs was on the whole safe. At the ultimate close of the bank's operations, in fact, the institution proved to be perfectly sound, and it returned to its shareholders a handsome profit.

The special peculiarity of the State Bank of Indiana lies in the fact that it represented a pure bank of issue operating in an agricultural community and making its loans by means of notes rather than deposit accounts. Its experience is peculiarly representative of what might be expected under a system whereby reasonable liberty in the issue of notes could be granted to the country banks of the United States. It should be observed that the maximum circulation mentioned in the above table is $4,044,996, the capital being $1,600,000.

OHIO.

The general bank act of Ohio was enacted March 7, 1842, and provided for regular incorporation, defining the powers of banks, and prohibiting the undertaking of business until all the capital should have been paid in gold or silver. The capital stock was to be examined by the bank commissioners and certified to. The proportion of circulation to capital, and the manner of issuing circulation, was prescribed, as well as a special tax on capital and circulation. The creation of a safety fund was ordered, and rules for the receiving of the notes of other banks, etc., were laid down, while the denomination of notes was carefully regulated. This act was further amended by an act of January 25, 1843.

This act prohibited any person from serving as director in more than one bank at any one time, forbade loans for periods in excess of six months, regulated dividends, defined the duties of directors, required bank examinations by directors at least once in each six months, and made a variety of other innovations. Under this legislation some bank charters were granted, but the most important step was taken in the passage of the act of 1845. That act provided that it should be lawful for any number of persons, not less than five, to form banking associations, the aggregate amount of the capital of all companies under the act being fixed at $6,150,000. The State was divided into twelve districts, in order that the number of banks to be established might be properly distributed, and other regulations were made. The act incorporated the State Bank of Ohio on somewhat the same principles as those followed in the State Bank of Indiana.

A board of five banking commissioners was organized to oversee the banks of the State who, upon organization, were to determine whether they wished to do business as independent banking companies or as branches of the State Bank of Ohio. The State Bank of Ohio was, in fact, merely a system of banks very loosely bound together by the tie of a common oversight and control through the board of five bank commissioners already referred to. No branch of the State bank was to have a capital less than $100,000 and no independent bank less than $50,000. All notes were to be made payable at the office of the branch in gold or silver coin. The ratio of circulation of branches of the State bank was regulated as follows:

"On the first $100,000 or any lesser amount of its capital, not more than twice the amount of such capital; on the second $100,000 or part thereof, not more than one and a half times the amount of capital over $100,000; on the third $100,000 or part thereof, not more than one and a quarter times the capital over $200,000; on the fourth $100,000 or part thereof, not more than once the amount of such capital over $300,000; and on any amount of capital over $400,000, not more than three-fourths of such capital over $400,000."

Each branch was to pay 10 per cent on the amount of this circulation, to create a safety fund, which was to be invested. Branches refusing redemption of notes were to be put in liquidation. In the case of independent banks, a different method of securing the notes was provided. They were to deposit certificates of funded debts, either of Ohio or of the United States, to the amount of their stock, and in case of failure to redeem the notes, the State treasurer was to sell the stock and redeem the outstanding circulation. Examinations were provided for. Each banking company was required to have on hand gold and silver coin, or its equivalent, one-half at least to be gold or silver coin, in the vaults, to an amount equal to at least 30 per cent of the outstanding circulating notes. Loans to any single person or firm were limited, and the paying out of any depreciated notes was forbidden.

Under this legislation a large number of banks, whose charters had expired in 1843, availed themselves of the provisions of the act by becoming branches of the State Bank of Ohio or independent banks under the act. In 1846 there were seventeen branches of the State bank—that is to say, institutions issuing notes under the new law without bond deposits; nine independent banks (institutions with bond deposit), and eight old banks. A sound and uniform currency was provided which was maintained constantly redeemable in coin at par value. The "asset-secured" notes, with no special safeguard except the safety fund behind them, circulated on as favorable terms as the notes of those banks which were secured by a pledge of bonds issued by the State of Ohio or by the United States.

An act to authorize free banking in Ohio was passed by the legislature March 21, 1851. Capital was not to be less than $25,000 nor more than $500,000. Notes were to be issued to the banks by the State auditor and were to be secured by deposits of Ohio or United States bonds. Thirty per cent of the amount of outstanding notes was to be kept on hand in gold or silver or its equivalent. Notes of other banks were to be received at par. Bonds were to be sold to redeem circulation in case of failure to pay gold or silver for the notes when presented.

A number of banks were organized under the provisions of this act and went into operation side by side with the different kinds of banks already existing under the act of 1845 and earlier laws. During the business difficulties from 1854 to 1858 many Ohio banks failed, but it was noticeable that these banks were mostly private institutions not operating under the banking laws of the State. Very few authorized banks actually failed. As Mr. John Jay Knox remarks, "The banks authorized under the laws of 1845 and 1851 were uniformly successful, and furnished a currency to the people not one dollar of which was ever lost to the holder thereof." It thus appears that the history of banking in Ohio shows that safety was quite as readily assured under a free banking system, with notes secured only by the regular commercial assets of the bank aided by a safety fund, as by the bond-deposit system which was later inaugurated. The solvency of the institutions and the soundness of the notes depended not upon the pledging of some portion of the bank's assets as security, but upon the character and administration of the law under which they were operated.

IOWA—THE MINERS BANK OF DUBUQUE.

The act incorporating the Miners Bank of Dubuque was approved November 30, 1836. The capital stock was to be $200,000, in shares of $100 each. One-tenth of each share was to be paid to the commissioners receiving subscriptions at the time the subscriptions were made, and the balance in such installments as the majority of the directors should prescribe. The total amount of all kinds of indebtedness over and above specie deposited was

restricted to three times the sum of the capital stock then subscribed and paid in.

The directors were to be seven in number, and the bank was prohibited from holding land, except when necessary for the convenient transaction of its business, or in case it received such land by bona fide conveyance, in satisfaction of debts previously contracted. No notes were to be issued less than $5, and no notes whatever until $40,000 in coin had been paid in by the stockholders as a part of the stock. The legislature retained power to prohibit in four years from the date of the act the issue of notes below $10. Congress, in amending this act, forbade the bank to issue the notes until one-half the amount of its capital stock was paid in. The privilege of determining whether the capital of the bank should be increased to more than $2,000,000 was not left entirely within the power of the stockholders, the previous consent of Congress being required in case of any increase.

The whole stock of the bank was speedily subscribed and the institution opened its doors October 31, 1837. About two months later it appeared that $100,000 of capital stock had been actually paid in, $41,147 being in specie and the remainder in the notes of New York, Pennsylvania, Illinois, Wisconsin, and Michigan banks. The amount of specie on hand was reported as $42,118. Notes outstanding were $11,435, of which only $2,000 were demand notes, and individual deposits amounted to but $3,043. The bank had always paid specie when demanded at the counter.

Notwithstanding considerable opposition, due to local jealousy, the Miners Bank continued to do business, and the governor of the State was able to report in 1841 that, according to returns furnished by the cashier for a date near the close of 1840, the circulation of the bank was less than $40,000 while the vaults contained more than $45,000. Owing to business depression and the suspension of most of the other banks of the country, the Miners Bank found it convenient to suspend specie payments March 29, 1841. From the resolutions then adopted, it appears that the bank had intended to continue to pay specie and that it would have been entirely convenient for the institution to have redeemed the amount of notes that would ordinarily have been sent in for redemption.

The action of some large banks outside the State in attempting to drain it of specie by excessive presentation of notes had led the Miners' Bank to decide upon suspension. According to a statement of assets and liabilities then prepared, the cash on hand all told, including notes of other banks, amounted to nearly $60,000, of which something over $40,000 was in gold and silver. Notes outstanding were $97,000. During the suspension the notes tended to increase very largely in volume, so much so that on the 1st of January, 1842, it appeared that the notes outstanding amounted to $167,030, while its resources in the form of "due from other banks," notes of other banks, and gold and silver, were less than $130,000.

Specie payments were resumed April 19, 1844, and from that time until the repeal of its charter the bank met all obligations in specie when so desired. During the suspension the notes depreciated considerably, and it was claimed they were bought at a heavy discount by nonresident stockholders. The charter of the Miners' Bank was repealed by an act which became law on the 18th of May, 1846. Trustees were appointed to close the affairs of the bank, and they finally wound up the institution.

The Miners' Bank of Dubuque was a reputable institution which rendered considerable service to the State in the way of loans, and, except during the period of suspension, which was practically forced upon it by the action of the other banks of the country at that time, it always maintained the equality of its notes with specie by redeeming them on demand. It does not appear to have abused the issue privilege in any way, for its circulation was maintained within reasonable limits, and a fair reserve was always kept to secure exchangeability. No bond deposits or other special assignment of assets, designed to afford special security to note holders, was required of the institution.

WISCONSIN—"GEORGE SMITH'S MONEY."

The peculiarity of early banking in Wisconsin is found in the fact that it grew up without any specific banking legislation, and without regulations governing the issue of circulating notes. In 1838 a charter for "The Wisconsin Marine and Fire Insurance Company" was applied for by George Smith and Alexander Mitchell under the laws of Wisconsin. Smith took a copy of the charter of the Chicago Marine and Fire Insurance Company to Wisconsin and got the Territorial legislature to reenact it. The bill became a law February 28, 1839. At this time the Chicago Marine and Fire Insurance Company was issuing certificates of deposit which were circulating as money. The Wisconsin company was organized under the new charter, and within a short time began business with a capital of $225,000.

The charter thus granted contained some peculiar provisions, their chief oddity being that while general banking privileges were denied, certain specific privileges were granted. The charter read in part as follows:

"This corporation may likewise receive money on deposit and loan the same on bottomry respondentia, or other satisfactory security, at such rates of interest as may be done by individuals by the laws of this Territory; may also make insurance upon life or lives, and employ such capital as may belong or accrue to said company in the purchase of public or other stock or in any other moneyed transactions or operations for the sole benefit of the said company, and in general the said company may transact all business usually performed by insurance companies, provided nothing herein contained shall give the said company banking privileges."

Later on the charter provided that if the company should receive on deposit any bank notes and lend them, it should indorse them by the signature of its president and redeem them in specie in case the issuing bank should fail.

Business began on the 13th of August, 1839, and, despite the apparent intention that no notes should be issued under the charter, the directors began immediately to issue certificates of deposit similar to bank notes, and continued this practice until 1852, when the general banking law of the State went into effect. Certificates of deposit amounting to $4,819 had been issued by March, 1840, and the certificates increased until they reached $34,028 on January 10, 1842. They were issued in denominations of $1, $3, $5, and $10, and soon found a wide circulation throughout Wisconsin, Illinois, Iowa, Missouri, and Michigan.

The total amount outstanding was at various dates as follows:

January, 1842	$34,028
April, 1843	52,000
December, 1843	100,000
November, 1845	250,000
July, 1847	300,000
November, 1848	600,000
October, 1849	1,000,000
December, 1851	1,470,225

The certificates were redeemed at par in specie at the parent office in Milwaukee, and at agencies in Chicago, Detroit, Buffalo, Galena, Cincinnati, and St. Louis in New York exchange at the current rate. Several times during the decade 1840–1850 concerted runs were made upon the bank with the avowed intention of breaking it, if possible. The day after Thansgiving, 1849, some Chicago and Detroit bankers who had been collecting the notes for several weeks presented these notes at the main office of the bank in Milwaukee, circulating at the same time a report that specie payments had been suspended. The bank succeeded in redeeming every note without difficulty, and the various attacks on the institution in reality strengthened its position.

When the law of 1852, entitled "An act to authorize banking," was adopted in November, 1852, the Wisconsin Marine and Fire Insurance Company called in its certificates, redeemed them dollar for dollar, and reorganized as a State institution, adding the word "bank" to its title.

The money which had been provided by Smith and his associates was always redeemable and was an elastic currency, there being no limit to the issues except the capacity to redeem. Within this limit all good paper was discounted, the notes issued in exchange being merely the notes of Smith himself, based upon the notes of the community, which in turn represented the sound, commercial assets of that community. It was an elastic currency whose volume was dependent upon the volume of business, redeemable on demand because managed by a competent banker, and which was sound and solvent for the same reason. It did not depend upon legislation for safeguards, yet it enjoyed the full confidence of the community—a confidence which was never disappointed.

MICHIGAN.

Free banks were organized in Michigan under the general banking law of March 15, 1837. This act required that stockholders should place securities in the hands of the auditor-general of the State for the full payment of all debts of the bank, including circulating notes. The securities required to be deposited were either the personal bonds of the stockholders or bonds and mortgages executed by them upon real estate within the State of equal value, exclusive of buildings. Thirty per cent of capital had to be paid in in specie before business could be undertaken.

Under this law banks were started at random almost, and issued great quantities of notes, many of which did not circulate at all, being refused at any rate of discount. It was impossible to secure the redemption of the notes, and the circulation in Michigan shortly became so large that it averaged $125 to each family then in the State. The loans made were mostly to stockholders, who, as a rule, had already mortgaged their only security in order to start a bank. At the beginning of 1839 the bank commissioners estimated that at least a million dollars of notes of insolvent banks were in the hands of individuals. Most of the currency issued in this way became an absolute loss to the holders.

The great difficulty was, as usual, not with the kind of security required for protecting the notes, but the lax way in which the law was enforced. Had the law been strictly lived up to, the deposited securities being carefully valued and the specie regularly paid in, no banks would have existed, because the securities and specie could not have been obtained. The unconstitutionality of the free-banking law was announced by the supreme court of Michigan in 1844. The banks were held to be illegal institutions, their securities void, and the obligations they had undertaken worthless. The result of this sweeping decision was simply to cause the absolute collapse of the whole banking mechanism, throwing the loss chiefly on the note holders of the bank and nullifying their claim upon the securities which had been deposited in the hands of the State auditor. A free-banking law similar to the free-banking law of Indiana, Ohio, Illinois, and New York was adopted in 1858, and under it a considerable number of banks were organized.

Early banking in Michigan thus appears to have been conducted under such extraordinary conditions that no inferences of any sort (contrary to what is often supposed) can be drawn from it.

ILLINOIS.

A bank was chartered at Shawneetown as early as 1813, and was incorporated in 1816 as the Bank of Illinois, beginning business on January 1, 1817. Its capital stock was not to exceed $300,000, one-third of which might be subscribed by the Territory. It was to be permitted to begin business as soon as $50,000 had been subscribed and $10,000 had been paid in. Its liabilities, exclusive of deposits, were not to exceed twice the amount of its paid-up capital. Other banks were incorporated on January 9, 1818. One of these was the Bank of Edwardsville, which was also to have a capital stock of $300,000, one-third to be subscribed by the State.

It was the only reputable institution chartered under that act. It and its predecessor, the Shawneetown bank, succeeded in doing a considerable business, becoming depositories of Federal funds. The Edwardsville bank, however, failed in 1820, after the close of the period of inflation and speculation, which culminated in the crisis of 1819. Its companion bank continued to do business until it was forced to close in 1823. In 1819 the combined circulation of Illinois banks was $52,021, while their specie on hand was $74,715. They had issued and redeemed their notes on demand as required by their charters, which compelled payment of the notes at sight in specie under a penalty of 12 per cent per annum on the notes defaulted from the time of the failure until the obligations were paid.

It thus appears that the first system inaugurated in Illinois was one for banking on commercial assets, with a comparatively free issue of notes. The banks succeeded in managing the issue of notes successfully, as appears from the statement just made concerning the volume of their circulation as compared with the amount of specie on hand. Their failure was due not to the fact that they issued notes secured only by commercial assets, but simply to general bad conditions in the financial world. As Mr. C. H. Garnett says, "these banks had been perhaps as successful and useful to the community as any banking institutions could have been at that time."

In 1821 a bank known as "The President, Directors, and Company of the State Bank of Illinois" was chartered. It was to have a capital of $500,000 for ten years and was to have four branches. Three hundred thousand dollars of notes of denominations not greater than $20 nor less than $1 were to be issued. The notes were to bear interest at the rate of 2 per cent per annum and were payable for salaries of State officers and receivable for all debts due the bank. The bank had no real capital, except the cost of printing the notes, which was appropriated from the State treasury. It goes without saying that the history of the bank thus incorporated was a record of unfortunate experiences and financial difficulties.

In 1835 another act incorporating the "president, directors, and company of the State Bank of Illinois" was passed. The capital was to be $1,500,000, which might be increased by individual subscription by an amount not exceeding $1,000,000 and business might be commenced as soon as $250,000 in specie was subscribed. The State might subscribe $100,000 whenever the legislature thought that the condition of the treasury justified such a step. The bank was to continue twenty-five years. It could issue notes to the extent of two and one-half times its capital stock, exclusive of deposits, and could loan and discount to three times the amount of such stock. In case it should refuse for ten days to redeem any of its notes and specie its charter was to be forfeited, and damages assessed to the holder of the notes at the rate of 10 per cent from the time the notes were presented until they were paid. Notes below $5 were not to be issued.

The fact that some reasonable restrictions had been placed upon the operations of the State bank and that it was to be a real and bona fide institution ought to have resulted in a prosperous career for it, and would undoubtedly have done so had it not allowed itself to be drawn into various forms of bad banking. It became involved in a commercial contest between two rival cities, and had to be helped out by permission to increase its stock. Then under the stimulus of the passion for public improvements the bank again became involved in unwise real-estate loans, and was entangled with the State by the latter's subscribing for a block of shares. In consequence of these various operations the institution finally failed, and its failure was followed by the failure of various other banks, leaving the State flooded with depreciated note currency.

This is the famous Illinois experience with so-called "asset currency," of which so much has been said by those who favor bond security as a protection against unsound banking and overissue of notes. From what has already been said it will be apparent that in the case of the Illinois banks the usual trouble was not the overissue of notes in proportion to their nominal capital, but the fact that this capital never really existed, and that they held little or no specie to back the paper they put out. Of course, it could not be expected that banks which were engaged in real-estate transactions at fictitious values and in promoting foolish schemes of internal improvement could be successful. When they failed, their notes naturally became a loss to their holders, just as in the case of the other liabilities.

It should be remembered, however, that even had they deposited bonds issued by the State in which they were located the notes would have been practically no better than they were under the system actually followed, for at the time when difficulties were worst Illinois bonds were selling on the market for only 14 cents on the dollar. The credit of the bank notes was most of the time considerably superior to that of the State. Moreover, the banks held large quantities of State bonds. It could scarcely have been expected that institutions which went into operation practically without capital or specie should be able to buy United States bonds and do a banking business on legitimate lines vastly superior to the general business of the communities in which they were located.

An act to establish a general system of banking modeled after the New York system was passed by Illinois in 1851. It provided that any number of persons might form a banking association upon depositing with the auditor at least $50,000 of United States stocks on which full interest was annually paid, or Illinois stocks valued at 20 per cent less than they had been sold for in New York for six months previous, no stock to be valued above its par value or its market value at the time of deposit. The persons making the deposit were to receive from the auditor notes of denominations above $1 to an amount equal in value to the stock deposited.

The issue of notes by the auditor in excess of the amount of stocks deposited was forbidden under heavy penalties, and stockholders or creditors to the amount of $3,000 or more might at any time apply to the circuit court for a judicial examination of the bank. The auditor was to deliver to the bankers an amount of deposited stocks equal to the amount of any notes returned to him for cancellation. Notes were redeemable only at the bank where issued. When any bank refused to pay its notes on demand, the auditor was to sell the pledged bonds at auction in New York, and pay the notes, with 12½ per cent interest as damages, from the proceeds. The bank was to be prohibited from exercising further banking privileges; its assets were to be taken by a receiver and applied, first to the redemption of notes, second to the payment of other indebtedness, and third to the payment of stockholders. If the stocks and other effects of the bank were insufficient to redeem its notes, the stockholders were to be liable in their private capacity to the amount of their shares. A board of three commissioners was provided for who were to examine the banks annually and inspect the securities held by the auditor. If any of these had depreciated, additional security was to be required. The officers of each bank were to make quarterly statements of the condition of the bank to the auditor. A bank might go into voluntary liquidation, after redeeming 90 per cent of its notes and depositing specie for the remainder.

Under this law, passed and finally approved at an election in November, 1851, 17 banks were started within a year, with a circulation of $1,351,788. The stocks deposited with the auditor to secure circulation were for the most part bonds issued by local improvement companies. A few bonds of neighboring States were also deposited. In 1854, according to the report of the auditor, the number of banks had increased to 33, two of which had gone into liquidation in a solvent condition, and one, having failed to redeem its notes, had been placed in the hands of a receiver and its securities advertised. The bonds then on deposit were all at par except those of California (estimated at 80 per cent) and those of Illinois (estimated at 50 per cent).

The system of redemption here in vogue was merely that of

redeeming at the home office in specie, leaving the notes to circulate and gain what acceptation they could by being received at other institutions upon such terms as those other banks saw fit to accord them. Under this plan the following note issues were kept in circulation and the following reserve of specie was held to back them:

Specie and circulation of Illinois banks.

Year.	Circulation.	Specie.
1835	$178,810	----------
1836	653,661	----------
1837	1,565,573	----------
1838	1,990,993	----------
1839	3,729,513	----------
1840	3,724,092	----------
1841	4,367,829	----------
1843	2,212,127	----------
1845	1,183,256	----------
1853	1,351,788	----------
1854	2,283,526	$83,592
1856	3,420,985	37,165
1857	5,534,945	19,297
1858	5,238,930	6,433
1859	5,707,048	9,272
1860	8,981,723	59,927
1861	11,011,837	37,920
1862	1,415,076	----------
1863	619,286	55,793

This showing speaks for itself and emphasizes the failure of a mere bond deposit requirement to assure sound banking.

Notwithstanding the requirement to keep bonds on deposit, the system seemed to be able to endure only while commercial prosperity lasted. In fact, whatever success was attained by the banks of Illinois, under the bond-deposit system, came in consequence of the sudden improvement of the business situation about the time that this system went into effect. When the crisis of 1857 came on, the securities deposited began to decline, and it was necessary to call on the banks to put up margins to bring the value of their securities up to par of notes outstanding. This resulted in a refusal on the part of some banks to respond. More went out of business.

The formation of new banks was discouraged and practically ceased. The State had gradually become filled with "wild-cat" money, which came, it is true, largely from other States, but much of which was issued by Illinois banks located in inaccessible places where redemption could not be required. Although locating banks in such places was forbidden by law, it continued and the institutions went on issuing currency. Still in 1860 there were 110 banks organized under the general law, with a circulation outstanding amounting to $11,320,694, while the securities behind it were $11,336,423.

An analysis of the conditions of banking in Illinois during the years just prior to the war shows that the greater measure of success enjoyed by the bond security system, small as it was, was due not to the bonds deposited, but to the greater care exercised in enforcing safeguards which had been worked out in the course of experience with banking during the earlier period.

LOUISIANA.

The Bank of Louisiana was chartered with a capital of $4,000,000, one-half of which was subscribed by the State. The State's subscription was paid by the issue of 5 per cent bonds, authorized at the rate of $100 in bonds for every $83.50 of stock, payable at intervals of from ten to twenty-five years from their date. These were to be sold by the bank for specie. In 1826 the general assembly of Louisiana indicated its dissatisfaction with the methods of controlling the bank and the delay in declaring dividends and insisted upon the declaration of the dividend upon the State stock at least. In 1827 the profits accruing to the State were sufficient to permit $300,931 of the bonds to be called in and paid. In 1844 the State treasury received authority to sell 12,000 shares of the stock of the Bank of Louisiana in order to raise funds to pay the bonds, $1,200,000 falling due in 1844 and 1849. The bank itself purchased the bonds and redeemed them punctually, while the remainder of the State stock was also ordered sold in 1844 in order to meet other bonds which were falling due.

The Union Bank of Louisiana was incorporated in 1832 with a capital of $7,000,000. The institution was established on the same basis as the Union banks of Florida and Mississippi. The subscribers of the stock paid in nothing, but merely gave a mortgage to cover the amount of their subscriptions, the actual capital being derived from the proceeds of $7,000,000 in bonds issued by the State for that purpose. Every stockholder might borrow from the institution one-half the face of his shares and the State had the right to borrow $500,000. Like all such banks, this institution failed, the crash coming in 1842, with assets in such shape that the collection of anything from them was slow and difficult.

The bank known as the Citizens' Bank was also established with the aid of bonds issued by the State, which furnished the actual capital, while stockholders secured their subscriptions by mortgages on real estate. Other similar banks were organized. All these institutions issued notes in considerable amounts, but not sufficient is known concerning them to draw any conclusions as to the wisdom of the policy pursued by them.

Notwithstanding the bad principles upon which these banks were organized, they did not issue notes which, so far as the absolute amount or the amount considered relatively to capital stock are concerned, seem to have been excessive. Thus in 1835 the State Bank of Louisiana had in circulation $751,987 of notes. In 1837 this changed to $841,190; in 1838 to $141,742. In 1839 there were $292,722 of notes outstanding, while the circulation of the Union Bank at the same date was $638,470, and that of the Citizens' Bank $428,450. In 1840 the State Bank had $261,747 of notes outstanding, the Union Bank $964,630, and the Citizens' Bank $308,725.

The experience of the State was in general more favorable in connection with banking than that of most of the other Southern States which allowed themselves to become entangled in the business. Nevertheless the conviction became strong that the State was not a suitable agency to carry on business enterprises of this kind, and this impression prevailed to such an extent that in 1852 the State constitution finally prohibited the further undertaking of banking enterprises by the provision that "the State shall not subscribe for the stock of, nor make a loan to, nor pledge its faith for the benefit of any corporation or joint-stock company created or established for banking purposes." In fact the experience of earlier years was so instructive that when the State in 1842 passed a general bank act the legislation adopted included most of the safeguards which had been worked out in other States and was as thorough and complete a banking law as existed in the country. This general bank act passed in 1842 required a specie reserve equal to one-third of all liabilities to the public. For the other two-thirds of its liabilities an equal amount of ninety-day commercial paper was to be held. Notes were to be paid at maturity, and if not paid the account of the borrower was to be closed. No bank was to pay out the notes of other banks. All banks were to pay their balances to each other in specie at the end of each week, and were not to buy their own shares or lend on their own shares more than 30 per cent of the market value thereof. The bank act allowed some loans to be made on mortgage security, but restricted these loans to the bank's capital. None of the Louisiana banks suspended in the panic of 1857, thus constituting a brilliant exception to the general condition prevailing throughout the country. Notwithstanding the fact that no bond deposit was required and no limit set to the issue of circulating notes, except that arising out of the specie-reserve requirement already referred to, the notes were not overissued, being amply protected by the wise provisions of the law. By 1860 Louisiana stood fourth in banking capital among the different States of the Union and second in specie holdings.

It thus appears that in one sense the experience of Louisiana was analogous to that of the New England States, inasmuch as it resulted in developing a thoroughly sound and satisfactory system of banking under which banks were established and did business in a perfectly safe and conservative way. In fact, the experience of the New England States, Louisiana, South Carolina, and Virginia may alone be taken as establishing conclusively the possibility of conducting a sound and scientific banking system under rigid laws without any special note security.

KENTUCKY.

The Bank of the Commonwealth of the State of Kentucky, with a capital of $2,000,000 and branches in each judicial district, was chartered November 29, 1820. It was authorized to issue notes to one and a half times the amount of its capital, or $3,000,000 in all. The "public faith" was pledged for the redemption of the notes and a guaranty fund was established by setting aside certain State bonds. The notes were not a legal tender, but were payable and receivable for all public debts, dues, and taxes. Loans to single individuals were limited to $2,000.

Notwithstanding the close relationship between the bank and the State, and the fact that the public faith and credit and a certain number of State bonds were pledged for the redemption of circulation, it was not very long before the notes of the bank fell to 62½ cents on the dollar. They reached this figure by March 22, 1822, and continued to fall until they passed at a small fraction of their face value. The bank was considerably hampered by litigation, and it was doubted whether the notes of the institution were not such as are forbidden by that clause of the Constitution of the United States which forbids States to emit bills of credit. Ultimately, although the Supreme Court of the United States held that the notes were not bills of credit of the State, the institution had to be placed in liquidation, and thus the aid extended

by the State did not preserve the bank and its notes from becoming unacceptable to the people.

Another institution, entitled the Bank of Kentucky, with a capital of $5,000,000, was chartered during the legislative session of 1833 to 1834, and, during the same session, the so-called Northern Bank of Kentucky, with a capital of $3,000,000, and the Bank of Louisville, with a capital of $5,000,000, were also chartered. This made $13,000,000 of possible capital in all, but the actual paid-in capital never aggregated more than $9,030,000. The Bank of Kentucky was to have six branches, and $1,000,000 of its capital was to be paid by the State in 5 per cent bonds. One million dollars additional was to be made up from the accumulation of annual dividends.

These banks all shared in the distribution of surplus revenue among the banks of the States, and shared, too, in the depression which followed. They were obliged to suspend specie payments in 1837, notwithstanding that they had $1,900,000 in specie against $3,300,000 of circulating notes outstanding. Most of the banks resumed specie payments, but again suspended in October. Another suspension took place in 1839, but resumption came again in 1842. Thus the institutions went through practically the same vicissitudes as all other banks of the period.

Among the three large banks chartered by the legislature of 1834 the only one still in operation at the present time is the Bank of Kentucky. The Northern Bank of Kentucky went into liquidation a few years ago, and the Bank of Louisville was merged in the Southern National Bank. The circulating notes of the Bank of Kentucky circulated not only throughout the State, but were found in Pittsburg, Wheeling, Cincinnati, and partly throughout Indiana. It constantly appeared that the notes had a tendency to return to the parent bank for redemption in specie or Eastern funds, and this necessitated keeping the resources of the bank in an available condition. It had been provided in section 4 of the charter of the Bank of Kentucky, and by similar regulations in the charters of other banks, that these institutions were not to owe an amount exceeding twice the paid-in capital, exclusive of sums due on deposit.

In May, 1837, the circulation of the principal bank was $2,430,000 and that of the branches $1,505,000. As has been seen, even at the time of suspension the banks of Kentucky combined had about $1,900,000 in specie against $3,000,000 of circulating notes. After the period of suspension and resumption which terminated in 1842 the bank continued to be successful down to the time of the civil war, redeeming its notes on demand and experiencing great prosperity. So conservatively were they managed that none of them were injured even by the crisis of 1857, but all continued to pay specie even after the suspension of the New York banks had taken place.

Thus the experience of Kentucky shows that the institutions of that State without provisions for bond deposit were quite as successful as the generality of banks throughout the United States, the solvency of the institutions and the redeemability of their notes being maintained without special deposits of securities to protect circulation.

TENNESSEE.

Early banking in Tennessee was conducted in the usual way at that early date, i. e., under very slender restrictions. In 1807 the first bank (the Nashville Bank) was established. For some time this institution was successfully carried on and its notes enjoyed a fair degree of credit. Other banks were established from time to time, but in 1819, during the commercial difficulties, had to suspend specie payments. At that time there were outstanding about $898,129 of notes, while specie on hand was $343,884. The suspension of specie payments resulted in a heavy depreciation, while the notes of sound banks outside the State were at a corresponding premium.

In 1811 a bank entitled "The President, Directors, and Company of the Bank of the State of Tennessee" was chartered, the State holding $20,000 out of a total capital of $400,000. By this time the wisdom of some limitation on note issues had been learned, and denominations below $5 were forbidden. From time to time bank failures occurred, and between 1811 and 1830 a total of $2,229,782 of bank capital had either failed or retired from business.

A bank of the State of Tennessee was chartered in 1820. By this time still further restrictive ideas had grown up. The capital was $1,000,000, but notes of not less than $5 nor more than $100, and not exceeding a total of $500,000, were permitted. Branches or agencies were established, and under certain restrictions real estate loans were permitted to be made. The bank was made an official depository, and it might have been expected that it would succeed. Real estate loans, however, seem to have been a source of disastrous weakness in the bank, and owing to these and dishonesty on the part of the cashier the institution was finally abolished in 1832.

These unfortunate experiences led to much sounder ideas on banking, both among members of the legislature and private individuals. It became recognized that restrictive legislation was necessary and that the business of banking must be conducted only on the basis of quick assets, and in a strictly solvent and legitimate way. On these principles the Union Bank of Tennessee was chartered by the legislature October 18, 1832, the capital stock being limited to $3,000,000, of which $500,000 was subscribed by the State. This State subscription was paid, as usual, in State bonds, which were issued to the bank and sold by it. The bank covenanted with the State to pay into the State treasury one-half of 1 per cent a year on its capital stock as a bonus. Notes issued by the bank were to be received by the State in payment of taxes and all debts due. This institution continued in operation until 1865, redeeming its notes regularly until it went into liquidation in that year. Notwithstanding the fact that no special security for its note issues had been required, and notwithstanding that there was no limitation on the amount of notes which could be issued, it was one of the most useful and profitable financial institutions in the country, and its five branches succeeded in meeting the needs of the communities in which they were located in a perfectly satisfactory way.

A third State bank, entitled the Bank of Tennessee, was chartered by act of the legislature January 19, 1838. The faith and credit of the State were pledged to support it, and $2,500,000 of 6 per cent thirty-year State bonds were ordered sold for its benefit at not less than par. Besides these bonds, the capital was to be made up to $5,000,000 from the common school fund, the sales of certain land, and the State's surplus revenue. As a matter of fact, only about $2,073,355 was actually realized for the capital from the different sources already mentioned. Notwithstanding this start, so unfavorable in some respects, the earlier part of the bank's career was fairly successful and profitable. Its notes, like those of the Union Bank and the Planters' Bank of Tennessee, passed current at par throughout the State, and an arrangement was made at Nashville whereby the notes of the Bank of Tennessee and its branches were redeemed at the parent bank in that place. The branches were situated in out of the way places, and at first notes were made payable at these branches, and in discounting paper branch notes were usually paid out, under the supposition that the notes issued would not reach the branches for redemption before the maturity of the paper. In spite of some minor irregularities and unwise policies of this sort, the earlier bank misery was now over for the time, and a prosperous period of sound banking set in and lasted during the decade from 1843–1852. A thorough redemption system was put into operation by several of the banks and resulted in maintaining their notes at par throughout the State.

Unfortunately, this successful condition of affairs was broken in upon by the determination of the legislature to pass a free banking law. This was done during the session of 1851–1852 and far from improving the currency by the issue of notes based upon bonds and presumably more secure than those issued under the former plan, it resulted in a thorough disorganization of the currency and banking system of the State. This law was closely copied from the New York free banking law, but under it a considerable number of banks based on fictitious capital were organized, and an immense redundancy of currency occurred. Gov. Andrew Johnson in 1853 condemned this system of banking on bond deposit, and in his message of 1855–1857 he repeated his suggestions of 1853, with the further recommendation that the Bank of Tennessee should be put into liquidation and its affairs closed as early as possible. The free banking system, with notes based on the deposit of bonds, had its effect in producing the panic of 1857, at which time nearly all the banks of Tennessee suspended specie payment and proceeded to curtail their business until 1861 when war necessities led the legislature to pass a law compelling banks to increase their circulating medium. The circulation of the Bank of Tennessee, which was $1,313,728 in 1861, expanded to $4,710,666 in 1862.

No conclusions concerning the relative advantages of the different modes of banking in vogue in the State of Tennessee can be drawn from the experience during the civil war. Conditions were then so disturbed that it would be absurd to expect any institution to operate successfully, no matter on what system it might be organized. The various banks which continued in existence at the close of the war found themselves operating under new conditions after the war was over, and many of them went into liquidation as a consequence either of losses during the war or of the effect of the national banking system upon them. The period during which any inferences concerning the goodness of the notes can be drawn, of course closes with the opening of the war, and it appears that there was certainly no superiority to be attributed to the bond-secured bank notes of the earlier day. In fact, the wild-cat notes which circulated in Tennessee were practically all of them issued on the basis of bond security.

MISSISSIPPI.

The Bank of Mississippi was chartered by the Territorial legislature December 23, 1809. It had a capital stock of $500,000, $100,000 of which was paid up. The issues of notes were restricted to three times the amount of its capital stock, its control was vested in a board of 13 directors, elected by the stockholders, and the directors were made individually liable for any excess of notes over the prescribed amount. In 1818 it was furthermore provided that there should be 16 directors, that the State should subscribe one-fourth of the capital stock and should appoint 5 of the 16 directors, that the capital should be $300,000, and that the bank should furnish the State with a monthly statement of its condition and allow the governor the right to frequently inspect the books. The notes were made a legal tender and were given a monopoly of circulation. In 1831 the capital amounted to $1,048,500, the notes to $451,040, the deposits to $209,127, and the State debt to the bank to $962,823. Throughout the whole history of the institution the bank had an honorable career, fulfilled its whole duty to the State, redeemed its notes regularly, and finally went into liquidation in a perfectly legitimate way, reimbursing its stockholders and redeeming its notes in full.

During the existence of the Bank of Mississippi and after the expiration of its charter various other institutions were put into operation, some by State aid and others without it. The history and experiences of all these institutions are fragmentary and little can be learned about their work. Banking in Mississippi and in some other parts of the Union was then carried on subject to such loose and general regulations that nothing can be said with accuracy concerning its history, save in the case of certain institutions.

The Mississippi Union Bank, with a capital of $15,500,000 to be raised by loan, was incorporated in 1837. The main features of the charter of the bank were that only citizens of Mississippi and owners of real estate situated in Mississippi were entitled to become stockholders. They were bound to give mortgages on their plantations and real estate and negroes to the amount of their stock, which would entitle them to borrow of the bank one-half the amount of their stock on twelve months' time at 7 per cent, and at the end of twelve months to renew their notes for twelve months longer during the space of eight years, provided they should pay at the end of each renewal all accrued interest and one-eighth of the principal. Two-thirds of the capital of the bank was required to be loaned on mortgages. Books of subscription were to be opened at every county seat in the State, and commissioners were to receive applications and mortgage papers for loans to be deposited with the banks.

To facilitate the bank's obtaining the $15,500,000 loan the faith of the State was pledged for the capital and interest, and it was provided that $15,500,000 of Mississippi State 5 per cent gold bonds, made payable to the order of the Mississippi Union Bank, signed by the governor and countersigned by the treasurer of the State under the seal of the State, should be delivered to the bank. This charter was reenacted in the following legislature (1838), and a supplementary bill was passed requiring the governor of the State, as soon as the books of subscription of the bank were opened, to subscribe for 50,000 shares of the capital stock on behalf of the State, paying for them out of the proceeds of $5,000,000 semi-annual 5 per cent State bonds, which the governor was required to execute and deliver to the bank.

The charter of the bank further provided that the bonds should not be sold at less than par. They were disposed of in the East to Nicholas Biddle, but probably did not bring quite par. Rates of exchange were such, however, that the total amount realized for the bank was more than par, when the proceeds arrived at Jackson, Miss. The bank almost immediately issued $2,450,000 of post notes, payable August 1, 1839, and $3,479,590 due in 1840, and $300,000 demand circulation. Loans were made freely on inadequate security. Another $5,000,000 of State bonds was issued in the summer of 1839 but could not be sold. The post notes of the bank at once went to a discount, and the same occurred in the case of its demand circulation. Eighteen months after it had been launched it had on hand only $4,349 in specie, while its demand liabilities were $3,034,154. The stock eventually became worthless. The notes were not redeemed.

By act of the legislature passed February 20, 1840, all banks were required from and after April 1 of that year to pay specie at their counters for all their notes and liabilities then due of the denomination of $5 and under, and from and after July 1 for those of $10, and after January 1, 1841, to pay specie on all their notes and other liabilities, while it was made the duty of the governor to make proclamation of forfeiture of all banking powers and privileges of those banks failing to pay specie on their notes after those dates. These provisions for redemption resulted in the forfeiture of the charters of nine banks which were unable to live up to the requirements, while seven other banks failed to comply with the requirement for specie payment in all cases and only five were reported as complying. Bank paper circulated at different rates on its merit and in some instances was only worth 2½ cents on the dollar.

The banks of the State continued to have a checkered existence throughout the years prior to the civil war. Very often they had little specie, and their credit was exceedingly poor. It should be remembered, however, that the reason for the difficulties in Mississippi and some other Southern States, of which so much is said by those who complain of the dangers involved in a bank-note currency, lay in the ideas regarding the effect of charters and banking operations, and the ignorance of the proper basis for banking. Thus, in Mississippi there were about as many unchartered as there were chartered banks, while most of them were founded upon real-estate holdings, the idea being that banking methods were chiefly designed to turn real estate into a circulating medium. In those institutions like the Bank of Mississippi, which were carried on upon legitimate lines, none of the tendency to unsoundness and depreciation of currency appeared, in spite of the fact that there were no more special pledges behind the notes of such institutions than there were behind those of the badly managed and badly organized banks.

Maj. R. W. Millsaps, president of the Capital State Bank of Jackson, explains the failure of the early efforts of banking in Mississippi as follows: "The enormous capital authorized, with privileges of emitting two or three dollars in paper to one dollar of paid-up capital, and the payment of capital in stock notes instead of specie, weighed down with onerous obligations to make long loans to the people of one-half or more of their capital at a low rate of interest and subject to renewal, were elements of weakness.

"Throughout all the Union at this time an epidemic prevailed that everybody could be made rich and the country made prosperous by means of paper money. Especially was this the case in the Western and Southwestern States."

VIRGINIA.

The first important system of banking in Virginia was modeled on the old Scotch plan. About half a dozen banks, with numerous branches, were authorized, and the legislation by which they were governed was substantially the basis of the laws on banking subsequently enacted. The Bank of Virginia, which was first to be chartered, in 1804, had a capital stock of $1,500,000. It was to be permitted to hold real estate and other property up to $3,500,000. "The total amount of notes thrown into circulation by the bank, together with the debt, were restricted to $4,500,000 over and above the number then actually deposited in the bank." This was an issue of three for one on the cash capital.

As a matter of fact, the Bank of Virginia and five other banks chartered under the same act and on the same principles seldom issued notes up to the full amount permitted them. They were not allowed to buy any public stock except their own. Their rate of discount was limited to six per cent and they were not permitted to loan money to any State or government except by special act. Moreover, the directors were made liable for any loss due to excess of issues. Their notes were receivable for all payments to the State and all idle public money was deposited with them. The State had subscribed $300,000 to the capital stock of the Bank of Virginia and borrowed it back at 4 per cent. Notes of less than $5 were prohibited.

In the case of all these banks the branches issued their own notes and really became complete independent banks. The notes circulated very widely, and notwithstanding that there were no special securities behind them except the general assets of the bank, and despite the fact that no special reserve was required, they maintained their hold on public confidence and enjoyed a high credit. The character of the operations of the branches may be understood from what was done by one of the branches of the Farmers' Bank of Virginia at Blacksburg.

This branch, with a capital of $60,000 and a surplus of $50,000—in other words, $110,000 of resources—kept notes outstanding to the amount of $146,274 and held only about $30,000 of specie against the notes. It had only $7,042 in deposits. Thus the Blacksburg branch, which was merely a typical example of the kind of banks then operating throughout the State, practically performed the same sort of function as did the State Bank of Indiana. It was a pure bank of issue, operating in a community which required its credit accommodations in the form of currency rather than in that of deposits. The 6 banks operating under special charters had a total of 41 branches.

A new period opened with a general banking law passed March 25, 1837. This was a law for the establishment of banks of issue based upon State bonds or the bonds of improvement companies guaranteed by the State. It also provided for banks of deposit and discount. According to this law, the total amount of the currency of the banks was never to exceed five times the amount of coin on hand, and in case the coin was reduced below one-fifth of

the circulation banks were required to stop discounts until the ratio was restored. Some of these banks actually issued as high as eight to one. Notwithstanding this, there was not a bank failure in Virginia prior to the war that caused the loss of a single dollar upon its notes. The notes were, in fact, at a discount of only one-fourth of 1 per cent in New York.

Under the free-banking act of 1837 bonds of the State, or guaranteed 6 per cent securities, were deposited with the State treasury to the amount of the capital. The bank was then authorized to issue notes to the full amount of stock guaranteed, of any denomination not under $5. The notes were countersigned by the State treasurer and had printed across their face the words "Secured by pledge of State securities." In the charter of the Bank of the Old Dominion, an institution fairly representative of this class of banks, it was provided that there should be a "contingent fund." This was to amount to 5 per cent of the cash capital, and was to be held in the vaults in order to meet any losses on the notes. The free banks were in general well managed and their issues enjoyed a wide circulation and high credit prior to the war.

From 1837 to 1860 about $10,000,000 of notes were, on the average, kept in circulation without loss to the holders. In spite of a brief suspension during the panic of 1857 the banks continued to do business, resuming specie payments in 1858 and redeeming their notes until the war opened. The following statement gives a survey of the resources and liabilities of the banks of Virginia on January 1, 1860:

RESOURCES.		LIABILITIES.	
Loans and discounts	$24,975,792	Capital	$16,005,156
Stocks	3,584,079	Circulation	9,812,197
Real estate	1,019,032	Deposits	7,729,652
Other investments	433,423	Due other banks	1,138,327
Due by other banks	2,756,047	Other liabilities	34,600
Notes of other banks	1,294,093		
Cash items	229,838		
Specie	2,943,652		

SOUTH CAROLINA.

John Jay Knox, speaking of the first experience with banking in South Carolina, says:

"The first era of banking in the new State of South Carolina was in 1792, when the Bank of South Carolina was chartered by the State legislature. * * * Five banks were chartered, viz:

Year.	Title of bank.	Capital.
1792	Bank of South Carolina	$1,000,000
1802	State Bank	1,000,000
1809	Union Bank	1,000,000
1810	Planters and Mechanics' Bank	1,000,000
1812	Bank of the State	5,000,000

"These banks were all located in Charleston, which was at that time the capital of South Carolina. The banks were ably and honestly managed by the best merchants and bankers of Charleston. Of the large amount of money deposited in those banks and the vast issues of currency not a dollar was lost until the civil war of 1861."

"The State bank system in the Southern States before the war," says Mr. Knox, "was popular and as perfect as anything could be outside of national banks. The laws regulating banks in South Carolina gave satisfaction throughout the country, affording as they did a sound currency and ample accommodation to the people. * * * The majority of the banks of South Carolina were located in Charleston. They were banks of issue and were all specie paying."

Some of the South Carolina bank notes, in fact, circulated all over the United States, and even in Europe under certain circumstances. The banking legislation of South Carolina was based entirely upon the principle of note issue secured only by the general commercial assets of the bank, and the success of its system was due solely to the good management enjoyed by the banks from the outset. The ultimate difficulties into which the South Carolina banks fell during the civil war were due to the necessities of the time and the large issue of notes which they were compelled to loan to the Confederate Government.

The Bank of Charleston was chartered in 1834 with a capital of $3,000,000, and succeeded to the business of the branch bank of the United States then about to go out of business. It was not long before the bank was regarded in Europe as one of the foremost institutions in the United States, and by its aid the trade of South Carolina and nearly all of the Southern States was greatly advantaged. At the outset of the civil war the notes of this institution circulated in every one of the States of the Union, and the bank was able to survive the war and pay all of its depositors and note holders in full.

When the war opened there were in all 22 State banks with an aggregate capital of $18,000,000, a circulation of $10,000,000, and deposits of $12,000,000. Not a bank failure had occurred in South Carolina since the close of the Revolutionary war.

NORTH CAROLINA.

The State Bank of North Carolina was established by an act passed in 1810. The capital was $1,600,000, and it was to begin business with one head office and six branch banks. Stock to the amount of $250,000 was reserved for the State itself. Only $200,000 in specie were paid in at the time the bank started in business, yet for a time the institution was prosperous, so much so that during the war of 1812 the notes of North Carolina banks, and among them those of the State bank, bore a premium of 4 per cent in Philadelphia. The general management was bad, and the notes were largely overissued. In 1818 for every dollar of specie on hand the bank had $12 of notes in circulation. A general statement for all the North Carolina banks about June, 1819, shows that although there were $1,640,085 in notes outstanding, only $157,147 of specie was actually on hand in the vaults. The evils of the situation did not lie in the character of the safeguards concerning notes, but in the general laxity of the ideas then existing concerning the payment of capital stock and the conditions under which banks should do business generally.

In 1814 some banks which had previously been chartered by special act had their charters extended, and profiting by the unfortunate experience of the past few years some restrictions were placed by the assembly upon the general business of banking. No notes below $1 were to be issued and a certain amount of taxation was to be levied on stockholders. Whatever wisdom there was in these provisions was, however, offset by other provisions requiring loans to the State and reserving portions of bank stock for the State without any payment in exchange. A somewhat improved condition of affairs, however, set in. All private notes were prohibited and the bills of authorized banks appeared to gain in credit, for during the war of 1812 the notes of the North Carolina banks enjoyed a premium of 4 per cent in Northern cities. They, however, fell off and in some places circulated at 25 per cent discount in 1819 and 1820.

The real difficulties of the situation were explained in a report to the assembly of North Carolina made in 1828. This report finds that most banks in the beginning had failed to require the payment of their capital stock in gold or silver, as provided by the charters, and that they had evaded demands for specie by getting possession of the State legal-tender notes and using them in lieu of coin. In other words, the committee showed that the banking evils of the State were due to doubtful if not dishonest methods of conducting business. So bad was the condition of things as a result of these defective methods that only $157,147 was kept in specie by the combined banks of the State, as against a circulation of $1,640,085.

Various other banks were established from time to time after 1832, among them the Bank of the State of North Carolina, with a capital of $1,500,000, two-fifths of which was reserved for the State. In 1835 the State issued $400,000 of 5 per cent certificates of the denomination of $1,000 each in order to pay for its stock. Banking privileges were bestowed upon various railroad companies and the condition of things did not improve. No special improvement in the State policy toward banking is observable until the Bank of North Carolina was chartered in 1858, with a charter running to January 1, 1890.

The Bank of North Carolina was the successor of the Bank of the State of North Carolina, as the latter had been of the State Bank of North Carolina. It was chartered in 1858–59 with a charter running to 1890. Its capital stock was to be $2,500,000, of which $500,000 was subscribed on behalf of the school fund and $200,000 on behalf of the State university. Only $7,500,000 of real and personal estate could be held by the company. Authority was granted to issue circulating notes not to exceed twice the capital or three times the specie on hand. The notes were to be of $5 and multiples thereof, and were made payable on demand with 12 per cent damages per annum for refusal. The bank was allowed to charge only one-half of 1 per cent per month for discounts. Notes were to be issued at the principal or branch bank where they were made payable, but payments to the bank could be made in notes issued anywhere. Real estate could be held for business and mortgages could be taken to secure previous debts. Branches were established at the outset in seven places. Under these conditions the bank began business, its reserve being principally in gold. On October 20, 1860, it had outstanding $1,311,301 in notes, while specie stood at $490,714. This circulation ran up to $1,673,730 in January 18, 1862, under pressure of the demand from the State treasury, the bank being under obligation to loan to the State, while specie ran down to $517,468. Even in this condition the bank stood as regards soundness at the head of North Carolina banks.

The experience of the State of North Carolina is substantially that of many other States which passed through disastrous exper-

iments with banking. The peculiarity of it is that a longer time was required by this State to work out a sound system of banking. It was not until the establishment of the Bank of North Carolina, just before the civil war, that the State had had sufficient disastrous experience to acquaint it with the dangers of bad banking and the safeguards required by that business. Had not the war come, it is generally agreed by competent contemporary authorities, the next few years after the chartering of the Bank of North Carolina would have seen the State emerge from its unfortunate currency and banking conditions, inasmuch as the new institution was founded upon correct principles which had been worked out in the course of the State's experience or had been copied from other and more successful States.

MARYLAND.

Early banking in Maryland followed closely the form of the Bank of Baltimore, established in 1795 and modeled to a considerable extent upon the charter of the First Bank of the United States. After the subscription of the stock the shareholders were to elect annually a board of fifteen directors, who were to elect one of their number president. When 3,000 shares had been subscribed and $150,000 paid in specie the election of the directors was to take place and operations were to begin when $300,000 had been paid in specie. Each stockholder was entitled to votes decreasing in number proportionately to the increase in shares owned.

Directors must be citizens of the United States, and one-third of them were ineligible for reelection after a year in office. Six hundred shares of stock, amounting to $180,000, were reserved for the State. Only such lands and tenements as were necessary for the transaction of business, etc., were to be held by the corporation, which was permitted to deal only in bills of exchange, promissory notes, gold or silver bullion, or in the sale of the produce of its lands. The maximum rate of interest on loans and discounts was to be 6 per cent. The total amount of debts which the corporation might owe, exclusive of deposits for safe-keeping, might not exceed double the amount of capital actually paid in. No notes less than $5 were to be issued.

In 1790, the Bank of Maryland was established on a very different basis from that of the Bank of Baltimore. Greater privileges were granted, and there were no provisions corresponding to the fundamental articles of the charter of the Bank of Baltimore. Prior to 1812 eleven banks were chartered in Baltimore, six of them starting as private partnerships, although when their charters were later granted their capital stock was distributed by means of subscription. In 1817 charters were required as a preliminary to engaging in banking. In no bank was there any provision that the issue of notes should be specially restricted, except in so far as the condition that the total of the bank's debts should not exceed twice its capital had some effect in this direction.

This limit, however, was so high for those days as to be of little importance, since it very seldom was approached. Perhaps the most important restrictions on banking were those which required personal liability and which confined the business of the banks to strictly banking operations, and demanded that capital should actually be paid in legal money. Another important restriction upon all the banks was found in the fact that the Bank of the United States maintained a branch in Baltimore. This naturally had a tendency to restrict the circulation of State bank notes, because such notes were steadily returned over the counters of the bank which issued them. By this means issues were more or less curtailed and daily exchanges became habitual between the banks.

From 1810 to 1818 occurred a general period of expansion, partly due to the fact that the Bank of the United States had gone out of business and partly to the disturbed financial conditions of the country. During this time occurred a suspension of specie payments in 1814, which, however, was general throughout the country. Resumption occurred on February 20, 1817, at the instance of the second Bank of the United States, which in the meantime had been chartered.

Usually the banks attempted to maintain an amount of cash on hand equal to one-third of their circulation. Though it is impossible to ascertain the exact circulation of bank notes throughout this period, some few returns for selected dates indicate how banking was being done in Maryland. On three such dates returns were as follows:

Year.	Number of banks.	Capital.	Circulation.	Specie.
January 1, 1811	6	$4,895,202	$2,730,000	$850,000
January 1, 1815	17	7,832,002	3,970,000	740,000
January 1, 1816	20	8,406,782	5,615,000	760,000

It thus appears that the specie on hand dwindled very considerably, the percentage of one-third of the outstanding circulation being on the last of the three dates above mentioned only about one-eighth. This, however, as has already been remarked, was due to general conditions throughout the country and not to any peculiarity in the system of banking in Maryland. In that State, as in many others, the notes went to a small discount during the suspension. Early in 1815 this small discount appeared in Baltimore, although the notes had previously stood at par in that city. Some banks failed during this period; but it should be understood what was the cause of the failure. Mr. John Jay Knox states that—

"The bad condition of some of the country banks from 1816 to 1820 may be ascribed to two chief causes: First, their weak organization; and, second, their loans on real estate. Loans had been secured by farmers during the inflation of 1816 to 1817; in 1817 the prices of agricultural products fell and the farmers were unable to meet their obligations. The banks, entering upon a restrictive policy, were anxious to retire as much paper as possible; renewal of loans was refused and in many cases the borrower became bankrupt. Much real estate fell into the hands of the banks, for which at that time the price was low and ready sale could not be found. With their resources locked up in real estate they were unable to meet their cash liabilities and were in almost continual suspension from 1817 to 1820."

It should also be borne in mind that, during this same period, the only failure that occurred in Baltimore was that of the City Bank, which failed in 1819. The system of banking employed in Baltimore was the same as that made use of by the country banks. The only difference lay in the greater use of real estate loans in the country as compared with the city. Then, too, the country bank charters were ordinarily somewhat less strict than they were during an earlier period or than those of the city banks. Very often only one-third or one-fourth of the first installment of the capital had to be paid in specie, and the amount of this first installment varied from one-third to one-half of the capital. Subsequent installments were entirely controlled by the directors, and thus an opportunity was offered for the use of stock notes.

It often happened that even the limitation of debts of the bank to twice the amount of capital paid in was omitted and no limit at all was imposed. Sometimes special acts had authorized the issue of notes of very low denominations. To these several circumstances may be attributed whatever weakness and failure is to be found in the banking system of Maryland. The fact that the system of banking employed was really better than that which prevailed in many other places is apparent from the fact that during the period of reaction and the period of crisis and stringency immediately after 1825, Maryland banks suffered much less than those of other parts of the country. Their entire circulation was then in good credit, none of it being at a discount.

From 1829 to 1836, a considerable banking expansion occurred. The Second Bank of the United States came to its close, being denied a recharter. Seventeen new banks were chartered, and two old ones which had failed in 1821 were revived. Only twelve actually organized. The increase of capital was $4,878,900, or about half as much as that which formerly existed. The new charters required a large quantity of specie to be on hand, this amount varying from the entire amount of the authorized capital to one-fourth of it. The discount of stock notes was forbidden, and numerous other restrictions were put into force. The result was that in 1836, 26 banks in a tolerably sound and solvent condition were in existence. They had a total capital of $19,176,000, of which $15,465,000 had been paid in.

A marked step in advance was taken in 1835, when uniform regulations for banking were introduced. In that year all Baltimore banks were made to conform to the charter of the Merchants' Bank of Baltimore. This charter was given early in 1835, and later banks were merely brought under its provisions. Here the important limitation was introduced that the issues of banks might not exceed the amount of the capital paid in. The total amount of debts, exclusive of issues, was limited to the same amount. Real estate falling into a bank's hands had to be disposed of within five years. The banks could invest in Maryland, Baltimore, and United States bonds. Denominations of bank notes were to be regulated and, in case of suspension of specie payments, interest might be demanded on the notes. In such cases all assets were to be distributed pro rata.

Under these conditions the status of the banks shortly became even sounder than it had been. Such few failures as occurred took place merely on account of recklessnes or bad banking in one form or another. When the crisis in 1837 led to the suspension of the Baltimore, Philadelphia, and New York banks, it appeared that the suspension was purely a protective measure in Maryland, since at the time of suspension the banks had $1 in specie in their vaults for every $3 of notes in circulation, while the ratio of specie to circulation and deposits was as 1 to 8. After resumption, in 1838, a rapid contraction occurred, and

issues fell from $3,400,000 to $2,900,000. Between October, 1839, and January, 1840, discounts declined $2,500,000, or more than one-seventh.

After industrial revival had begun, banking capital in Baltimore was gradually increased and the formation of new banks proceeded gradually from 1843 to 1862. Some savings banks were allowed to issue notes and some old banks were revived or allowed to enlarge their capital. But few failures occurred, although the number of banks was considerable. From 1843 to 1857 the amount of specie in the hands of the banks was always large in proportion to circulation, the condition of all the banks was sound, all redeemed their notes in specie, and no Maryland bank paper was at a discount within the State. A slight discount equivalent to the amount of exchange was to be observed on notes of Baltimore banks offering in New York.

The general situation of the banks may be reviewed in the following table:

Year.	Circulation.	Deposits.	Specie.
1843	$1,743,768	$2,977,174	$2,537,822
1847	2,400,267	3,863,891	2,095,078
1851	3,532,870	5,966,834	2,738,834
1854	4,918,381	8,621,052	3,405,090
1857	5,155,036	9,611,324	3,522,561

A general banking law was passed in 1853 merely representing a codification of laws already in existence.

It may be said that in general, prior to the civil war, the State bank system in Maryland, without any bond security, furnished as good a currency as there was in the United States. Whatever defects there were were due to faulty provisions in the charters, and insufficient restriction on modes of conducting the business.

ALABAMA.

Alabama had an early experience with banking in which two or three institutions unsuccessfully endeavored to carry on the work of furnishing currency without any special restrictions and subject to no clear-cut regulations. The prevalent idea that legislation could create money existed in extreme form in Alabama. By the terms of the constitution it was provided that there might be one State bank, with as many branches as necessary, the State to hold two-fifths of the stock, the rest being owned by citizens. Power was also granted to make provisions under which all banks already in existence might become branches of the State bank.

After various efforts to establish a State bank without specie and without much capital, the State Bank of Alabama was chartered December 20, 1823. Its object was "to provide for the safe and profitable investment of such public funds as may now or hereafter be in the possession of the State, and to secure to the community the benefits as far as may be of an extended and undepreciating currency." The capital was to be provided by the State, largely from the proceeds of various land sales and sales of State bonds. In all, $14,000,000 in State bonds were issued for this purpose, in addition to the proceeds of lands and certain funds belonging to the University of Alabama, in order to provide the capital needed by the State bank and its branches from time to time.

Thus a bank was put into operation based upon bonds and having behind it the entire credit of the State, so that if there were any special virtue in the idea of banking on bond security the history of the State Bank of Alabama ought to have been sufficient exemplification of it. The total amount received by the bank from the State was $15,859,420, but a large part of this sum was the result of stocks issued to keep the bank going during the crisis of 1837. In 1826 the institution had a capital of $253,000; notes outstanding of $273,000; with deposits of $164,000, and discounts amounting to $449,000; specie on hand was $141,000.

Eleven years later, however, in 1837, at a time when the capital had increased to $7,889,886, the notes in circulation had grown to $4,600,000 and its deposits to $6,700,000, but it held only $492,000 in specie. A large part of the assets consisted of bad debts. During the same year it was necessary to issue the $7,500,000 of State bonds already referred to in order to tide the institution over. The charter finally expired January 1, 1845, and the institution went into liquidation, its branches being closed by act of the legislature. The State remained burdened with a debt of $14,000,000 incurred for running the bank, while the schools and university had lost property amounting to a large sum in addition. As a compensation, it should be remembered that during a large part of the life of the bank the people of the State had been relieved of direct taxation.

It is worth while to note why it was that an institution like the State Bank of Alabama, backed up by the credit of the State, should not have been able to do a successful business. The reason is, as usual, found in the methods employed in managing the bank. The charge of the institution was intrusted to a president and 12 directors. Inasmuch, however, as the directors were elected by the general assembly they felt themselves practically obliged to discount the notes of all members of the legislature as well as the notes of those recommended by legislators.

As usual, the claim has been made that the difficulties experienced by the State Bank of Alabama were largely due to its note issues. It is, of course, true that there was no limit to the note-issuing power since the notes were merely to be put out in such sums as the president and directors might deem "most expedient and safe." Statistics, however, show that the amount of notes issued, even under this liberal provision, was never excessive in proportion to capital. One great trouble with the bank's operations in the conduct of its daily business was the tendency to let the specie fall off. As to its solvency, the statistics already quoted show how largely bad debts figured among its assets.

Subsequent to the closing of the State Bank of Alabama various other institutions were chartered, but owing to the relations between the State and the several institutions, as well as to the failure to develop any sound system of restrictive legislation, met usually with but little success.

NEW YORK.

During the first period of banking in New York, extending, say, from 1791 to 1812, there were no failures, although none of the banks were required to pay their notes in specie, circulation was unlimited and unguarded, and the whole business was unrestricted in its methods. When the first bank of the United States retired from business the same experience was passed through in New York as elsewhere. A large field for State banking was opened and the suspension of specie payments in 1814 increased the tendency to expansion. From 1812 to 1829, 24 new banks were chartered and 8 failures occurred.

About 30 bank charters were expected to expire between 1829 and 1833. This was considered, therefore, a good opportunity for inaugurating a new system which might assure protection against the tendency to failure already manifested, as just indicated, and against the other tendencies to unsoundness which were to be noted in other States. Therefore, a plan for a "safety fund," to be established by contributions from the banks and devoted to the payment of the obligations of failed banks, was outlined in the governor's message for 1829, and became a law on April 2 of that year. In cases of failure creditors were to be paid, so far as possible, by the distribution of the assets of the bank in the customary way, after which the comptroller was to meet any deficiency out of the safety fund, which was to be established by contributions from the banks not exceeding one-half of 1 per cent per annum upon their capital stock. This system was very much modified after 1827, and was finally limited so as to apply only to notes and not to deposits. The notes were not to exceed the amount of the capital, and were to be issued only by the comptroller.

The main point to be noted in connection with this system was that the notes were based on the general assets of the bank. Bank commissioners were also appointed to supervise and inspect the several institutions. The contributions to the fund began in 1831. Fifty-two banks were in operation under the safety-fund system in 1832, and there were 12 others outside. There had been a large increase in bank circulation from January 1, 1829, to January 1, 1832, banks outside of New York City and Long Island raising their notes from $4,508,056 in 1829 to $8,622,277 in 1832. In 1835 the number under the safety-fund law was 76, with a capital of $26,231,460, that of other banks in the State being $5,175,000. The circulation of the safety-fund banks was $14,464,023, and they had specie of $5,561,743, and specie funds in city banks amounting to $4,944,877. The safety fund amounted to $400,000. Despite various attacks on the banks and an effort to destroy public confidence in them, and despite, also, the suspension of specie payments by the banks in May, 1837, the working of the safety-fund act up to that year was thoroughly satisfactory.

The free banking law of New York was put into operation in 1837, and some competition arose between the banks chartered under it and the safety-fund institutions. The latter curtailed their loans during 1839 by $15,512,000 and circulation was reduced by $9,000,000. In spite of some friction and some depreciation in bank notes, due to changes in redemption methods, the safety fund was never drawn upon from 1829 to 1841, because no chartered bank became insolvent during those years. When the first bank failure occurred, about the end of 1840, it was found that the safety fund was really applicable to depositors as well as to note holders. This fact gave a fictitious credit to the chartered banks and for a year or two there was reckless expansion of loans as a consequence.

The act passed in 1842 confining the safety fund exclusively to circulating notes really came too late, for within the six months

prior to the passage of this law six banks had failed. Some unwise legislation between 1837 and 1843 tended still further to complicate the condition of the safety fund. As a result of the faulty wording of the original act, which permitted the debts of the insolvent banks to become a charge on the fund, and in consequence, too, of the later legislation, which failed to relieve the dangers of the situation, there was a deficit of $837,806 in 1845. Up to 1846 the total contributions to the fund prior to September 30, 1845, were shown to be $1,885,536, while redemptions of notes amounted to $1,769,922. Thus it is clear that the fund was really an ample security for the circulation of the banks which had failed.

Under the free banking system the institutions organized had been required to put up stocks of the State of New York or real estate mortgages, etc., to an amount nominally equal to the notes they issued. The comptroller of the State, writing in 1846, compared the safety fund and free banking systems, and said:

"In the security of the public under each system our experience in the failure of 10 safety-fund banks and about three times as many free banks proves that the contribution of one-half of 1 per cent annually on the capital of the safety-fund banks has thus far afforded as much protection as the deposits with the comptroller by the free banks of a sum nominally equal to all the bills issued by them. * * *.

"The loss to bill holders on the supposition that all the securities had been stocks of this State and bonds and mortgages would have been over 16 per cent while the actual loss has been nearly 39 per cent. The loss by safety-fund banks to the first holders from delay in payment and consequent depreciation was from 20 to 25 per cent, and there has been a loss of four years' interest to subsequent purchasers, whereas in the case of the free banks the securities were sold and the proceeds paid to the bill holders within a few weeks after the failure of the bank."

One matter that should also be borne in mind is that during the early operation of the safety fund many fraudulent notes were redeemed, owing to the absence of a system of registration, which was afterwards adopted.

The free banking system which was introduced, owing to the complaint that charters were granted to banks through a system of favoritism, was inaugurated as we have seen in 1838. It permitted associations to carry on the business of banking, and to receive and issue circulation upon depositing with the comptroller of the State stocks of the State of New York, or of the United States, or of any State, or bonds and mortgages on improved and productive real estate worth double the amount secured by the mortgage and bearing interest at not less than 6 per cent per annum. If an association refused to redeem its notes, the comptroller warned the managers, and if it continued to refuse for ten days after the warning its securities were sold, and the notes redeemed from the proceeds by the comptroller.

By November, 1840, 71 banks had organized under the free banking law, with a circulation of $5,367,976, secured by State stocks and mortgages amounting to $6,620,580. The friction developed between the free and the chartered banks brought on a slight depreciation of the currency which led to the law of 1840, requiring all banks outside Albany, New York, and Brooklyn to appoint an agent in Albany or New York to redeem their notes at a discount not exceeding one-half of 1 per cent. Free banks were also subjected to inspection, and the securities to be deposited thereafter were limited to those of New York. Thus a system of redemption was elaborated, which produced the same good results as the working out of the Suffolk system in New England.

In spite, however, of all that had been done, 29 banks which had organized under the free banking law had failed, and their securities realized only 74 cents on the dollar of the outstanding note. Some banks were placed in the hands of receivers, and there was a general shock to the confidence of the people in them. Later the system succeeded in getting more thoroughly upon its feet, and in 1848 the number of free banks was 53, while the aggregate circulation was $9,993,762 against deposited securities amounting to $10,640,182. Of these securities, $7,627,092 were stocks of the State of New York, $114,000 those of the United States, $1,514,979 bonds and mortgages.

Here, then, were two systems working side by side, one having its notes protected by a safety fund, the other by specially deposited securities. According to all contemporaneous testimony the contributions of one-half of 1 per cent annually on the capital of the safety-fund banks afforded as much protection as the deposits with the comptroller by the free banks of a sum nominally equal to all the bills issued by them.

In short, the outcome of the safety-fund and free-banking systems showed that there was no reason to prefer the plan of depositing securities with the comptroller to that of requiring protection by means of a safety fund made up from the contributions of the banks at a certain fixed rate per annum. It was clearly demonstrated that the safety of bank notes was dependent solely upon the method of conducting the business of the banks and not upon special securities set apart in order to safeguard them.

PENNSYLVANIA.

There are two periods of banking in Pennsylvania that deserve particular attention. One began very early, about 1782, and lasted until about 1816. During this time various banks were incorporated under special charters, with substantially the same general powers that were allotted to banks in all parts of the Union at this early period. These institutions were permitted to issue notes and do a deposit business. Certain limitations were imposed from time to time upon the methods to be pursued by the banks. For example, stockholders were individually liable at one time for all the debts of their respective institutions, although this provision was shortly after repealed. Further, unincorporated banks were forbidden to receive deposits, discount notes, or issue notes for circulation.

Despite the unsystematic and loose character of the banking regulations of the time, the condition of banks at the opening of the war of 1812 was very satisfactory. In 1812 three of the principal institutions in which the government of the State held stock reported circulation of $2,943,242 and deposits of $2,359,949, against which there was cash in the vaults amounting to $1,722,682. Deducting the notes mutually held by these three institutions, the real outstanding circulation of the combined banks was only $1,867,279, or little more than the cash on hand. Thus up to 1814 a thoroughly satisfactory system of bank currency based on commercial assets and without any extraordinary safeguards, such as the deposit of securities was provided.

In 1814 an act incorporating 41 banks, with an aggregate capital of about $17,000,000, was passed. According to this act the debts of each bank were limited to twice its paid-up capital stock. The rate of discount was limited, holdings of real estate were regulated, and the issue of notes below $5 was prohibited. The banks were required to report regularly. In 1816, 38 banks reported notes in circulation amounting to $8,151,677, and specie on hand of $1,932,321. Deposits were $7,473,823.

Specie payments were suspended during the financial difficulties after the war, and considerable difficulty was experienced in restoring them. It was, in fact, only by the work of the second United States Bank that the institutions were finally driven to resumption. This experience after 1814 occurred under such peculiar circumstances and shaded off in such a way into the sound banking period, which lasted during the life of the second United States Bank, that no inferences can fairly be drawn from it. The United States Bank was, of course, a bank of issue, issuing notes secured like all of its other liabilities, and furnished a sound and thoroughly satisfactory bank currency during the life of its charter.

The second period of banking in Pennsylvania, to which the student of note currency is specially attracted, begins with the act of 1841. This act was intended to relieve a bad condition which had arisen subsequent to the close of the career of the second Bank of the United States as a government instutition. After the destruction of that bank there had been a suspension of specie payments, which were ordered resumed by an act of 1840, under penalty of confiscation of charters. This threatened confiscation was revoked by the act of 1841.

In 1842 the banks were, however, again ordered by law to resume specie payments. Most of them complied, and in 1843 a new era opened with a total capital of $16,868,555. In 1850 the law of banking in Pennsylvania was elaborately codified. Stockholders were given additional liability to the note holders to the amount of all notes issued. Legal means for making this liability effective were also provided. But the most important feature of the act of 1850 was the institution of a system of redemption somewhat resembling the Suffolk bank system. Bank notes were to be kept at par in Philadelphia for the eastern part of the State and for the western at Pittsburg. In case of failure on the part of any institution to live up to these requirements a tax of two-tenths of 1 per cent of outstanding notes was to be paid.

Furthermore, provisions similar to those which subsequently became so familiar regarding the paying out only of the bank's own notes were included. The banks were to pay out no notes except those issued by themselves and redeemable on demand in gold or silver, notes of specie-paying banks of Pennsylvania which might have been taken on deposit or in payment of debts and certain other notes issued in accordance with special provisions of the act of 1841. The idea here was to prevent the banks from assisting in circulating any notes whatever, save those which were known to be of established goodness. Under this legislation the banks generally conducted their business in a satisfactory way down to the panic of 1857, when they, like many other institutions, was obliged to suspend. As is well known, however, the crisis of 1857 was nowhere the result of bad banking, but of bad commercial conditions.

The introduction of a bond-secured currency system did not come until 1860, when an act authorizing the organization of banks permitted to issue notes based upon State bonds was passed. The system was by no means successful, and very few banks were ever incorporated under it. This was largely due to the outbreak of the war and the disturbed financial conditions of the time. No comparison, therefore, can be instituted between banking on bond security and on general commercial assets in Pennsylvania. The interesting characteristic of Pennsylvania banking is that it affords two separate instances in which sound and solvent systems of banking under general laws without special security for notes were developed. In 1859, just about at the close of a second period of State banking just described, the circulation of the 87 Pennsylvania banks then existing amounted to $11,980,480, while the specie held by them was $11,345,536.

Public Building Bill.

SPEECH
OF
HON. MELVILLE BULL,
OF RHODE ISLAND,
IN THE HOUSE OF REPRESENTATIVES,

Tuesday, April 29, 1902,

On the bill (H. R. 14018) to increase the limit of cost of certain public buildings, to authorize the purchase of sites for public buildings, to authorize the erection and completion of public buildings, and for other purposes.

Mr. BULL said:

Mr. SPEAKER: This bill, among other provisions, contains the following section:

SEC. 10. That the Secretary of the Treasury be, and he is hereby, authorized and directed to accept as a donation from the city of Providence, in the State of Rhode Island, a suitable lot of land situated in Exchange place in said city, containing not less than thirty-one thousand square feet of ground, as a site, and to contract for the erection and completion upon said site of a suitable fireproof building, including fireproof vaults, heating and ventilating apparatus, elevators, and approaches, complete, for the use and accommodation of the United States post-office, court-house, and custom-house and other governmental offices in said city, at a limit of cost for said site and building of one million dollars, hereby fixed.

When said building is completed and occupied by the United States authorities the Secretary of the Treasury is hereby authorized, in his discretion, to sell the present post-office, court-house, and custom-house building and the site thereof, situate at the corner of Weybosset and Custom-House streets, in the city of Providence and State of Rhode Island, at public or private sale, after proper advertisement, on such terms as he may deem to be to the best interests of the United States, to execute a quitclaim deed to the purchaser thereof, and to deposit the proceeds of said sale in the Treasury of the United States as a miscellaneous receipt: *Provided*, That said building and site shall not be sold for any sum less than $300,000.

The Committee on Public Buildings and Grounds, in its report to the House upon the bill, comments upon the foregoing section, as follows:

Section 10: In 1854 the site in Providence, R. I., upon which the post-office building is now located, was purchased for $40,000. The present building was completed in 1857. The total cost of site and building to June 30, 1901, is $328,765.55. The city of Providence offers to donate to the Government as a site for a new building a tract of land in Exchange place, directly opposite a magnificent city hall, and within a stone's throw of a beautiful State capitol building, the site to be donated being worth about $500,000. The postal situation in Providence is bad, very bad, and patient indeed have been the people in that vicinity in waiting until now for relief. The present building and site can be sold, when the new building is completed, for almost as much as they have cost the Government to date.

Mr. Speaker, the section of the bill under consideration which I have read, providing for the erection of a public building in the city of Providence, R. I., will, I most ardently hope, remain in the bill, and be written upon our statute books, as now appears very probable, before the adjournment of the present session of Congress. This provision is the culmination of many years of patient waiting and painstaking effort on the part of the citizens of the city of Providence, and, in fact, of the people in general of the State of Rhode Island, for whatever makes for the good of our metropolis and capital city results beneficially to the entire State. It is therefore to this particular item in the bill that I desire to address myself.

Mr. Speaker, I am heartily in favor of and glad of the chance to vote for this bill, so carefully and diligently framed by the Committee on Public Buildings and Grounds, of which my genial and distinguished friend from Nebraska [Mr. MERCER] is chairman. I am glad to support this bill, not alone because it provides for the erection of a new public building in the city of Providence, which is in the district I have the honor to represent, but because the bill represents the conscientious efforts of that committee to bring in a measure here which could and will command the honest support of both sides of this House. This bill is an innovation in the matter of legislating for the erection of public buildings. In legislative nomenclature it is known as an "omnibus" bill because it carries items for the erection of buildings in many cities and towns throughout the country, and in many other cases increases the limit of cost of buildings heretofore authorized, or provides for the purchase of sites.

Such a bill has never before been considered by the House; hitherto each city demanding a public building was made to take its chances in a single, independent measure, and by that course Congress after Congress failed to recognize the just demands of our populous centers for relief from congested and overcrowded conditions of the postal, revenue, judicial, and other branches of the public business. But the great growth of our country, the increased amount of business transacted incident thereto, in private and in public institutions, and the consequent enlargement of Congressional representation and the increase in the number of legislative propositions submitted, renders it a physical impossibility, if not undesirable, to further legislate by piecemeal for the accommodation of the vast interests of the Government located in our cities and large towns. So it became necessary, if the Government's business is to be properly transacted, to make a departure and bring in one general "omnibus" bill providing for the most urgent and meritorious cases. This method of legislating has been adversely criticised; it has been called "logrolling," a "raid" on the Treasury, and the "danger" of it has been pointed out, mainly by those who failed to be provided for or by those who are ignorant of the merits of each item in the bill.

In reply to such criticisms it seems only necessary to state that every case in the bill was closely scrutinized and most carefully considered. They have been pending here, some of them, for years. Successive committees passed favorably upon them time and again, and one House or the other passed many of them. Take, for example, the case of the city of Providence, with which I am familiar. This is the fourth term in which my colleagues and I have been striving to secure the authority just about to be granted, and prior to my advent here my predecessors labored in the same cause; and I venture the assertion, and I believe the gentleman from Nebraska [Mr. MERCER] will bear me out in it, that of all the cases in this "omnibus" bill there is not one more meritorious than that of Providence. I will not say it is the most meritorious case, for I am as willing to accept the statements of other gentlemen as to the merits of the respective cases in which they are interested as I know they are to accept my statements as to Providence. It is also because of these statements and because of the confidence we all have in the rugged honesty and integrity of our friend [Mr. MERCER] and his associates on the Committee on Public Buildings and Grounds, that I give my hearty support to this bill.

The innovation thus made in the method of legislating for public buildings is in keeping with our progress in methods of doing business, both mercantile and legislative. It is directly in the interest of the people, for it closely affects their relations with the Government in many of its most important branches. There is as much, if not more, justification for it, to my mind, as in legislating in one general bill for the improvement of rivers and harbors. Who would advocate a return to the old system of a separate enactment to improve the rivers and harbors now provided for in the river and harbor appropriation bill? Such a step backward would as effectually put a stop to our commercial growth as would a blockade of our ports. And it is just as necessary that we should make wise, liberal, and periodical provisions for the accommodation of the extensive and varied machinery of the Government service as its needs appear to warrant from time to time.

I do not for a moment urge indiscriminate expenditures for public buildings. I do not think every city or town applying to Congress for a public building should get one, or, on the other hand, that we should deny them to all places as we have done for several Congresses, partly in a spirit of economy amounting to parsimony and partly through our indisposition to consider any one case in preference to others and through fear of letting down the "flood gates" if we took up the subject at all. But there is a safe, conservative middle ground in this matter, as in all things, between the extremes of reckless extravagance and cheese-paring parsimony upon which I think we safely stand in advocacy of the pending bill.

It requires but a glance at the following tables, compiled by the Committee on Public Buildings and Grounds, to show with what discriminating care the committee prepared this bill. The first table shows that the amount involved in the bills considered by the committee aggregated the sum of $66,975,936, while the second table shows the total amount apportioned by the pending bill to be only $17,405,450, a reasonable amount, yet liberal and well distributed.

Bills pending before the committee asking for authorizations amounting to $66,975,936, by States, Territories, and District of Columbia.

Alabama	$298,000	New York	$7,072,300
Arkansas	225,000	North Carolina	550,000
California	3,085,000	North Dakota	200,000
Colorado	1,575,000	Ohio	2,905,000
Connecticut	800,000	Oregon	310,000
Florida	815,000	Pennsylvania	1,828,000
Georgia	1,430,000	Rhode Island	1,625,000
Illinois	1,645,000	South Carolina	550,000
Indiana	1,325,000	South Dakota	475,000
Iowa	1,883,000	Tennessee	890,000
Kansas	300,000	Texas	1,515,000
Kentucky	1,179,000	Utah	200,000
Louisiana	2,090,000	Vermont	350,000
Maine	575,000	Virginia	1,905,000
Maryland	150,000	Washington	2,400,000
Massachusetts	3,776,200	West Virginia	920,000
Michigan	1,815,000	Wisconsin	940,000
Minnesota	575,000	Wyoming	200,000
Mississippi	180,000	New Mexico	100,000
Missouri	1,147,500	Oklahoma	200,000
Montana	475,000	Alaska	50,000
Nebraska	1,070,000	Hawaii	1,200,000
Nevada	60,000	District of Columbia	12,811,936
New Hampshire	200,000		
New Jersey	1,155,000	Total	66,975,936

Statement showing apportionment by States, Territories, and District of Columbia of the authorizations carried in H. R. 11018.

Alabama	$140,000	New Jersey	$315,000
Arkansas	225,000	New York	1,552,250
California	1,050,000	North Carolina	125,000
Colorado	345,000	North Dakota	125,000
Connecticut	325,000	Ohio	991,000
Florida	75,000	Oregon	160,000
Georgia	295,000	Pennsylvania	758,000
Illinois	526,000	Rhode Island	1,000,000

Montana	50,000	District of Columbia	1,575,000
Nebraska	525,000		
Nevada	60,000	Total	17,405,450
New Hampshire	80,000		

The expenditures authorized by this bill are in each case the result of deliberate study of the actual necessities of the public service, present and prospective, based upon thoroughly considered estimates, facts, and conditions, ascertained by searching investigations conducted by Treasury Department officials and experts and by members of the Committee on Public Buildings and Grounds, and are to be relied upon to intelligently direct the House in the disposition of the bill before it.

So much for the subject in general. As to the city of Providence in particular, that city has been knocking at the doors of Congress for years asking for decent accommodations for the Government's business there. Her business men and board of trade have petitioned, her newspapers have cried aloud, her officials and those of the State of Rhode Island have sought, and her good citizens generally have prayed for the relief which is only now and at last in sight.

This House has always been the great stumbling block. Either our rules or the condition of the Treasury has intervened as an excuse to prevent action. The Senate has repeatedly passed a bill for the erection of a public building in Providence, and each time it has come here only to die, not of inertia, but of lack of opportunity for consideration, or by being confronted with the stern necessity for retrenchment. Nearly five years ago the chairman of the Committee on Public Buildings and Grounds [Mr. MERCER] and the Supervising Architect of the Treasury Department (Mr. Taylor) told me that they thought Providence was in greater need of a new public building than any other city in the country; and those gentlemen have had that belief fully confirmed by subsequent personal investigations of the conditions there, and have shown by their earnest efforts to cooperate with the Rhode Island delegation to secure an appropriation by Congress that they meant what they said and realized the necessity of complying with our just demands.

Aside from the actual necessity for a public building in Providence we present a preeminently meritorious case. We offer to donate to the General Government a site for the building worth, it is locally estimated, at least $700,000, right in the heart of the city of Providence; it is a model site, with abundant open space to afford the building protection from fire from adjacent buildings, yet within a few minutes' walk of the business portion of the city, municipal and State buildings, and the new union railroad station.

I can not find that another city has been quite so liberal. Smaller cities, notably St. Paul, Minn., and Atlanta, Ga., donated sites, and also the following cities and towns: Austin, Tex.; Bristol, Tenn.; Cairo, Ill.; Chattanooga, Tenn.; Dallas, Tex.; Fort Scott, Kans.; Hartford, Conn.; Jefferson, Tex.; Lincoln, Nebr.; Memphis, Tenn.; Ottumwa, Iowa; Owensboro, Ky.; Lowell, Mass.; Pueblo, Colo.; Saginaw, Mich.; Sedalia, Mo., and Taunton, Mass. But all of these places having less population than Providence, and the original amounts appropriated for the erection of public buildings therein having been smaller, I venture to assert that no city in the United States has made so magnanimous a donation to the Government, and that too, notwithstanding its claims to a new building were recognized as being extremely just. Of the cities of the United States having a population of 150,000 or over, according to the census of 1900, the cost of sites for post-offices and other buildings therein, was as follows:

New York, $600,000; Chicago, $1,300,000; Philadelphia, $1,700,000; St. Louis, $400,000; Boston, $1,300,000; Baltimore, $550,000, Cleveland, $600,000; Buffalo, $45,000; San Francisco, $1,200,000; Cincinnati, $700,000; Pittsburg, $300,000 ($46,176 donated by citizens); Detroit, $400,000; Milwaukee, $400,000; Newark, $350,000; Jersey City, $72,000 (building and site); Louisville, $141,000; Minneapolis, $93,000; Indianapolis, $800,000; Kansas City, $450,000; Rochester, $75,000.

These figures will show at a glance the great liberality of the city of Providence in providing its own site, valued at $700,000. The diagram (see next page) which I will insert in the RECORD with my remarks shows the advantageous position of this site.

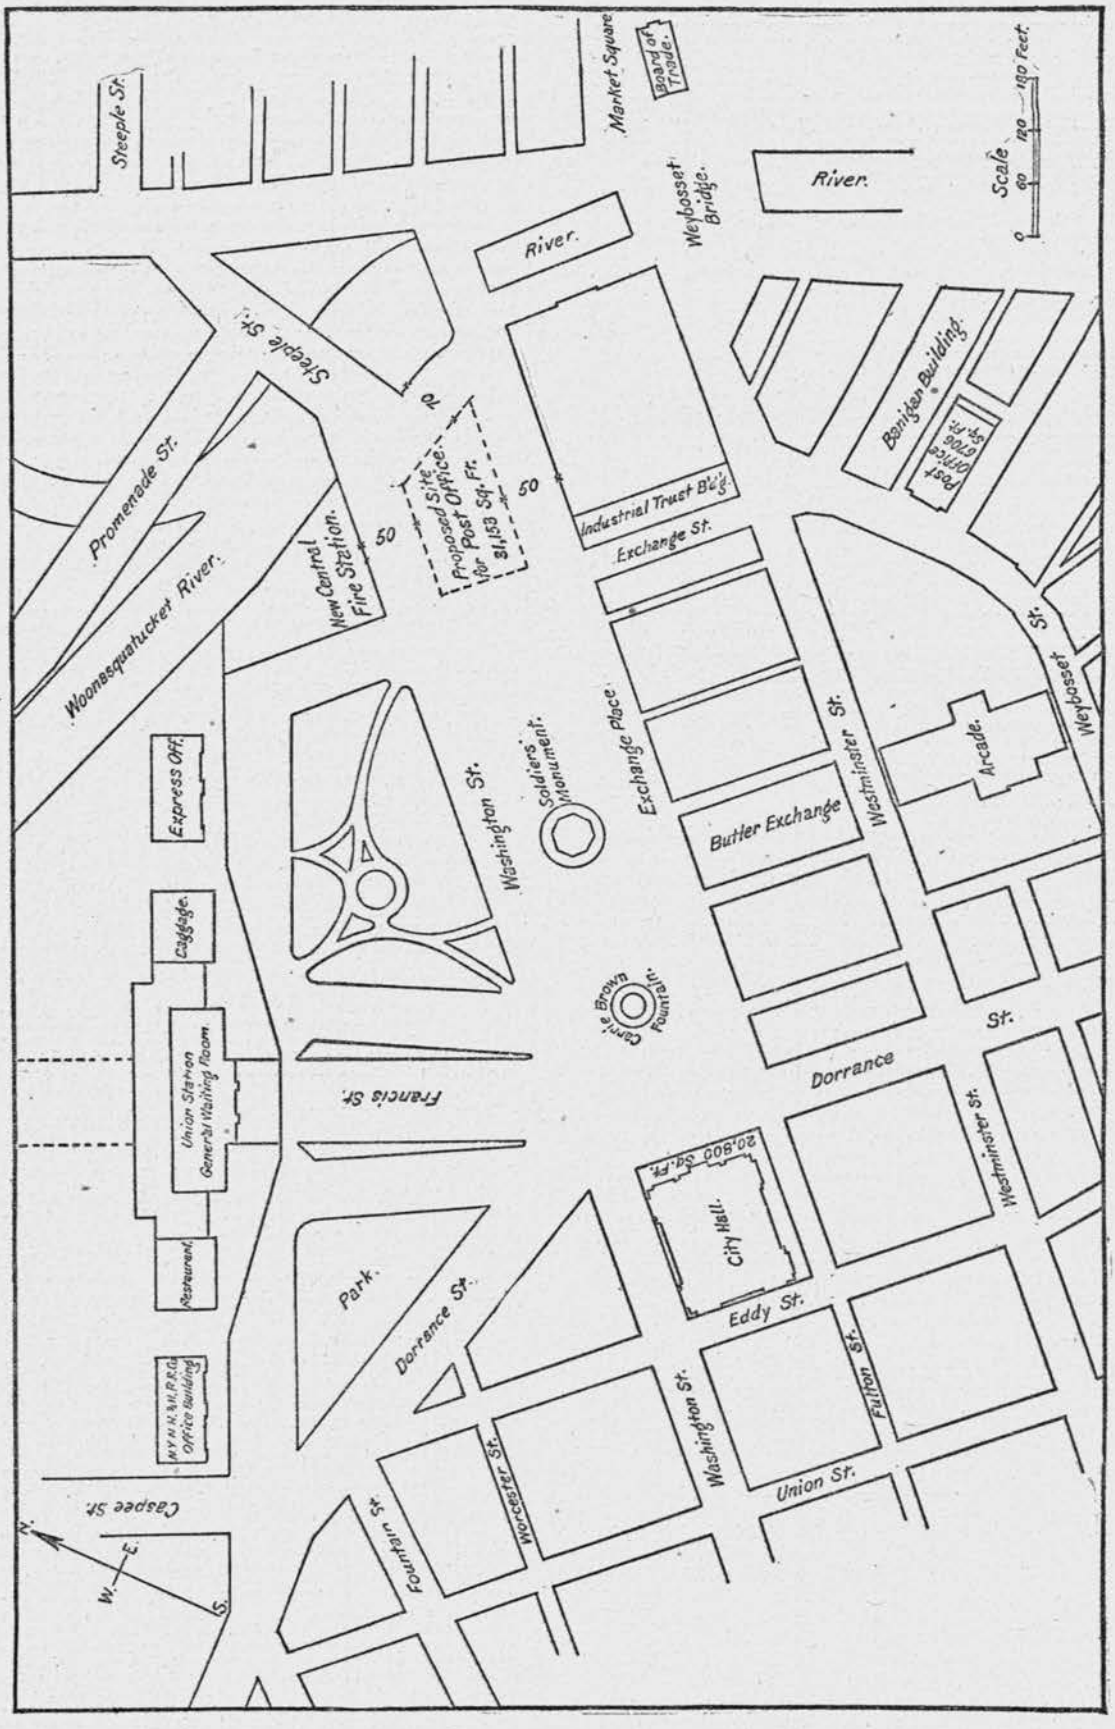
The present public building and site in Providence are authorized by this bill to be sold for not less than $300,000, so it will be seen that the limit of cost for the new building—$1,000,000—does not exceed the value of the site donated, together with the amount to be paid for the old building and site; but it is thought, however, that $1,000,000 will prove inadequate for the new building, and that the limit of cost will have to be increased in the future to not less than $1,500,000. The city hall in Providence, which stands at one end of the open square in which the site for the new building is located, was built during a period when low prices for material prevailed, yet its cost was something over $1,000,000, and it covers but 21,000 feet. The new public building will be one-third larger in area and can not be expected to cost less at prevailing prices than the city hall, foot for foot; but our people are only too glad of the start that has been made and are confident that Congress at some future time will see the necessity for a larger appropriation.

The building to be erected in Providence will be for the use and accommodation of the United States post-office, court-house, custom-house, and other governmental offices in that city. In a report from the Committee on Public Buildings and Grounds, submitted in the last Congress, the conditions then existing in the Government offices in Providence were described as follows:

All of the Government offices in that city are located in two small buildings. One, a two-story building acquired by the Government in 1817, is occupied by the appraiser's clerks and also used as a warehouse, and the other building, a three-story structure, is used by the post-office, customs office, district attorney, United States circuit and district court clerks, judges, etc. The latter building was erected in 1854 at a cost of $40,000, and there has been no increase of accommodation since. The business of the post-office suffers to a greater extent by the crowded condition of this building than the other branches of the public service, although all the offices are badly cramped for room.

An inspector of the Post-Office Department reported, on November 11, 1895, relative to the need of establishing carrier stations in order to relieve the crowded condition of the post-office, that by a personal investigation he found the employees very badly cramped for room, and the office probably as overcrowded as any in the United States. "It is so badly crowded," he stated, "that in the city delivery room it has been found necessary to build an elevated platform 12 by 16 feet, on which ten carriers are obliged to work." The lock boxes were reported in very bad shape and the ceiling black and smoky, giving the office a gloomy appearance. Further reports were made to the Department by two inspectors in November, 1896, from which the following is extracted:

"Further action by the Department will be required in addition to authorizing increase of the carrier force, in order to bring about a degree of improvement at the Providence office which is desired. The post-office building is notoriously too small for the proper accommodation of the employees. It is perhaps the most overcrowded of any first-class post-office in the country. It has been necessary to build an elevated platform in the office, on which 15 carriers are obliged to work while routing up their mail, there being no room for their desks on the floor of the office. This platform is not only poorly lighted, but it is a hot and disagreeable place for men to work. If the extra carriers herein recommended should be allowed, it would be a very difficult matter to find a place in the office for them to work."



The inspector in charge, under date of December 31, 1897, reported in regard to the furniture that "with the exception of the boxes (which have recently been put in) and the carriers' assorting tables, the furniture and fixtures are antiquated and dilapidated. The letter cases actually have to be tied together to prevent utter collapse."

Some little relief was obtained by the establishment in the fall of 1897 of two carrier stations.

There is no accommodation for the storage of stamped paper. Thousands of dollars' worth of supplies often have to be stored in the lobby allotted to the public, much to the inconvenience of the latter and at a great risk of loss by theft. Insufficient space in the mailing room made it necessary to hang a large number of bags and pouches on the walls. High buildings surround the post-office not over 20 feet away, cutting off the light and making it necessary to burn electric and gas lights day and night at the large annual expense of $4,500 to the Government, to say nothing of the injurious effects produced upon the eyesight of the clerks in the office.

The total area of the present office is 5,824 square feet. The actual working room is less than 3,000 square feet, affording a space of about 5 feet square to each employee, with desks, tables, stands, cases, etc.

Diagram showing site offered to be donated to the Government by the city of Providence, R. I.

More recent information, which accentuates the conditions above described, is contained in the following letter from the postmaster at Providence:

PROVIDENCE POST-OFFICE, OFFICE OF THE POSTMASTER,
Providence, Providence County, R. I., February 5, 1902.

Hon. MELVILLE BULL, M. C.,
Washington, D. C.

MY DEAR SIR: I beg to acknowledge receipt of your communication of 31st ultimo, and in reply to say that I will furnish you with a few facts caused by the lapse of time since the report was printed. It is true that there have been a good many minor changes made in the office since your report was made up, but every foot gained by such changes has been taken up by the addition of more men to perform the increased labor. A "deck," 16 feet by 47 feet, is now being erected at a cost of $1,225, largely for the purpose of storage.

The business of the office is rapidly increasing, as will be shown by the following figures, viz:

The gross receipts for the fiscal year ending June 30, 1901	$419,128.05
The gross receipts for the fiscal year ending June 30, 1898	339,720.48
Increase of gross receipts in four years	79,407.57
The net revenue for fiscal year 1900	239,776.10
The estimated net revenue for fiscal year 1901	260,000.00

Money-order business from January 1, 1901, to December 31, 1901.

	Number of transactions.	Amount.
Main office	153,483	$2,335,204.73
Elmwood station	4,609	69,993.55
North station	3,219	60,975.56
Olneyville station	8,112	134,103.40
27 substations	11,577	85,359.79
Total	181,000	2,685,637.03

The size of the room in which the money-order business of the main office is transacted is about 300 square feet.

The population of the city of Providence, as shown by the United States census of 1900, was 175,597, and to-day the health superintendent estimates it as 180,000.

The fact remains, however, that there are only a little over 5,000 square feet of floor space, including the lobby, which is so crowded at times that it is almost impossible for people to transact their business. The boxes are put in such a crooked shape that men have to wait while others are getting their mail. A few days ago in passing through the lobby I counted 23 persons in line at the stamp window, and 85 all told in the lobby, and during the recent holidays it was so congested as to make it very difficult to do business.

Inclosed herewith I hand you the copy of the report sent me.

Very respectfully,

CLINTON D. SELLEW, *Postmaster.*

There is little difference between the figures submitted by the postmaster and those given in the official report of the Post-Office Department as to the total amount of business transacted in the Providence post-office. The Department's figures for the fiscal year ending June 30, 1901, are as follows:

Gross receipts	$418,836.05
Net revenue	262,069.24

These facts and figures show conclusively the great need of a new building in Providence for the accommodation of its large and rapidly growing postal business, to say nothing of the greater importance of providing more comfortable quarters for the employees engaged in that work, whose health is now being injured and whose lives are in jeopardy in the present building. Modern buildings now surround the present post-office, dwarfing it completely and giving it a squatty appearance. In case of fire in the vicinity it would have meager chance of escape from destruction, as it is hemmed in on all sides.

The new building will also accommodate the Internal-Revenue Service, which is greatly cramped in its present quarters. Rhode Island is in the internal-revenue collection district of Connecticut. The aggregate collections in both States during the fiscal year 1901 were $3,099,988.95, and those for the State of Rhode Island were $1,287,095.61.

The customs service at Providence will find much needed relief in the new building. This service is steadily growing, and with improvements now in progress and those contemplated in the water approaches to Providence, and in the enlargement of its harbor, it is thought that Providence will soon take its rightful place as one of the great seaports of the Atlantic coast. Hitherto the commercial development of Rhode Island and its high standing as a manufacturing center have been achieved and attained by the inherent and indomitable pluck and business perspicacity of its people, combined with their thrift, energy, and enterprise. The State has not enjoyed the advantages of natural resources, and has been handicapped by lack of land and water facilities which might have added to its opportunity for development. In commenting upon these peculiar features of Rhode Island's commercial position, the bulletin of the Twelfth Census devoted to the subject of manufactures in Rhode Island says:

The factors that have contributed to this growth are limited; it must be attributed to the early and successful establishment of the factory system, particularly in the cotton manufacture; to the natural tendency of one industry to stimulate the introduction of other industries; to the abundance of capital, and to the enterprise and skill of the citizens. Rhode Island possesses no natural resources which have materially aided in its development. There is but one railway system of any importance connecting the manufacturing centers of the State with the outside world, thus eliminating the advantages of competition in railroad freight rates. The State has a natural outlet by water in Providence River and Narragansett Bay, making one of the finest harbors on the New England coast, but the lack of proper dockage in Providence Harbor, the natural port for the outlet of the State's products, combined with a too shallow depth of water for ocean traffic, has deprived the manufacturers of any great benefit from geographical location. The coal and raw materials for the factories are transported long distances, and this fact renders more notable the preeminence of the State in certain of the finer products of iron and steel, such as textile and other mill machinery, machine tools, screws, etc.

Since this comment was made Congress, in the river and harbor bill of this session, has provided for the expenditure of $100,000 during the fiscal year 1902 to improve the harbor of Providence in order to increase its anchorage area. This work will continue from now on at a total estimated cost of $600,000, and when completed will provide an increased anchorage area of 171 acres. This improvement, together with the improvement of Narragansett Bay and Providence River, now progressing, should and will increase the ocean and coastwise trade of Providence. But, notwithstanding the disadvantages under which Providence has been placed in the matter of transportation facilities, the amount of revenue collected at the port of Providence during the calendar year 1900 was $324,212.06 as against $224,668.99 for the previous year. The tonnage of the port, as well as of Pawtucket, the interests of which city and Providence are identical, an imaginary line only dividing them, and other interesting statistics are shown in the following report of the harbor master of Providence for 1901:

Report of harbor master, port of Providence, R. I., for the year ending December 31, 1901.

Providence:	
Number of vessels arrived at this port	1,864
Number of oyster-boat trips (estimated)	3,000
Number of steamer trips	7,950
Number of tug-boat trips (estimated)	435
Total Providence	13,249
Pawtucket:	
Number of steamer trips and vessels arrived	1,200
Total Providence and Pawtucket	14,449
Providence freight:	Tons.
Coal	2,000,662
Lumber (22,937,452 feet)	39,924
Laths (12,770,660)	2,554
Shingles (2,708,000)	339
Brick (2,099,331)	4,198
Oil (4,905,000 gallons)	14,426
Oysters (560,000 bushels)	15,555
Miscellaneous	35,032
Steamers' freight	753,329
Total Providence freight	2,866,019
Pawtucket freight	220,000
Total Providence and Pawtucket freight	3,086,019
Providence passengers, by steamers in and out	1,561,210
Pawtucket passengers, by steamers in and out	55,000
Total passengers, Providence and Pawtucket	1,616,210

NOTE.—The above estimates of oyster and tug boat trips are practically correct.

Respectfully submitted.

J. T. P. BUCKLIN, *Harbor Master.*

Gain over previous year, 112,516 tons, 187,756 passengers.

Terms of the United States circuit and district courts are held in Providence. The courts meet in the upper part of the building occupied by the post-office, and there also are located the offices of the United States marshal, district attorney, and clerks. It is a contracted, inaccessible, and undesirable place for such purposes. The dignity and importance of the Government's legal machinery in the State of Rhode Island long since required better and more commodious quarters.

As stated before, the present building in Providence, used by all the Government offices in that city, was erected in 1854. The population of Providence at that time was about 50,000. According to the census of 1900 the population of Providence was 175,597. Estimates place the figures now at 180,000, but it is hardly an exaggeration to state that the true population to-day is 225,000. The city is surrounded by towns, villages, and communities, many of them separated from the city only by imaginary lines, while those adjacent are reached in a few minutes by a splendid electric-car system converging in all directions, thus bringing the people for miles around in close contact with the city and making them to all intents and purposes its citizens. A writer truly described the relative position of Providence as follows:

The geographical position of Providence is such as naturally makes it the converging point for the surrounding country. It lies at the head of navigation on Narragansett Bay, 30 miles from the ocean. The business section is at the confluence of two small rivers, the Mosshasuck and the Woonasquatucket, with the tidal waters of Providence River; but the city extends miles in all directions from this center, covering on the east a high ridge between the Providence River and the Seekonk, the tidal estuary of the Blackstone River; on the north and northwest, spreading out over the low hills which rise from the union of the rivers, while to the west and south the main bulk of the city now stretches. A short distance below the city line, on the south, the Pawtuxet River flows into Narragansett Bay. The valleys of these four rivers, the Mosshasuck, the Woonasquatucket, the Pawtuxet, and the

Blackstone, are dotted with a continuous succession of manufacturing cities, towns, and villages, engaged in the cotton, woolen, and other manufactures, and as every valley, as well as each shore of the bay, has its railroad, all these places are in close communication with Providence, their shipping point and base of operations.

Providence is, therefore, in the truest sense a metropolitan city. It is also cosmopolitan, but it is a distinctively American city, and its people are patriotic to the core. The area of the city of Providence is 18.29 square miles. In 1890 it had a population of 132,146, and stood twenty-fourth in the list of American cities. It grew during the last decade by leaps and bounds, and in 1900 was the twentieth city in point of population in the United States. It ranks second in this respect among the cities of the New England States. It is estimated that should the public building to be erected stand for fifty years, about the age of the present building, the population to be served will be not less than 600,000, and that if the increase in population during the next fifty years equals that of the last fifty years it will be nearer 1,000,000 than 600,000.

Providence itself is not without magnificent and costly local and State buildings. The new statehouse, opened January 1, 1901, erected by the State of Rhode Island at a cost of $3,000,000, is one of the finest buildings of its kind in this country. It is said to have the only marble dome in the world outside of India. This great building is only a short distance from the site of the new Government building. The Providence city hall, erected in 1878 at a cost of $1,000,000, a stately and substantial building, is almost within stone's throw of the site to be donated to the Government. The new union railway station bounds Exchange place on the north and lies just to the left of and between the city hall and statehouse. This is a commodious, well-equipped, and modernly appointed structure of light brick and terra cotta.

The new public building will be just east of this station a short distance, and its convenience in the matter of quick dispatch of mails is at once apparent. The south side of Exchange place is lined with large business houses and office buildings, and in course of erection, between the railway station and the new building site, on the north side of Exchange place is the new central fire station. This building, exclusive of land, will cost in excess of $160,000. Thus it will be seen that in the very heart of Providence in a great open space, much of it reclaimed by the city at enormous cost, will be located, at practically no expense to the Government, a building wherein the Federal business may be transacted with every modern facility at its door. This space will then be surrounded by an imposing statehouse, a handsome municipal home, up-to-date railroad accommodations, fire apparatus housed in unusually fine quarters, blocks of mercantile houses and the realization of hopes entertained for years—a Federal building comporting with the material growth of Providence and with the dignity of the Government's interests located there.

All of these national, State, municipal, and private utilities within sight and easy reach of each other, yet sufficiently separated by open space as not to be endangered in case of fire.

But I have mentioned only a few of the buildings of which Providence may justly boast—those in the business heart of the city. Not far from the new statehouse is the State normal school, another splendid State edifice with spacious surroundings. Then there are the Brown University buildings, the Industrial Trust Company, Union Trust Company, Rhode Island Hospital Trust Company, Public Library, and Banigan buildings, which may be classed as "sky-scrapers;" the Young Men's Christian Association and other association buildings, the home of the Hope Club and other club houses, many handsome church edifices, palatial homes, and less pretentious but substantial business houses and private residences furnish abundant proof of the building progress and stability of the city of Providence. And besides these structures, all completed, or in a few cases nearing completion, the city of Providence authorized expenditures for new schoolhouses, new fire stations and sites in 1900 and 1901, aggregating $455,000.

Providence has 96 school buildings, 26 fire stations, and 7 police stations. The city owns 20 other buildings, including the Board of Trade building, Highway Department buildings, etc. In the first quarter of 1901 the total enrollment of pupils in the schools of Providence was 26,548. The city of Providence owns real estate, public buildings, parks, waterworks, etc., valued at $12,000,000. The valuation of taxable property in Providence for 1901, real and personal, was $192,801,860, upon which taxes were paid amounting to $3,084,829.76. The cost of an improved sewer system up to September 30, 1901, was $8,000,000.

Providence has a public park area of 23,003,983 square feet, valued at $1,501,057. Roger Williams Park, the largest park in the city, contains over 400 acres. This park is the city's popular pleasure ground. No less attractive and beautiful than the park itself is the main approach to it by way of Elmwood boulevard. Another beautiful boulevard is the Blackstone, and also known by this name is a park of about 35 acres, and another park of about the same area—Davis park—of great natural beauty, is convenient to the homes of a large population.

The total indebtedness of Providence in 1901 was $17,321,460.46, or, deducting sinking funds amounting to $3,284,521.32, the total indebtedness was $14,036,939.14, which includes a water debt of $6,000,000. The estimated income of the city for 1901–2 is $3,844,702.76. The city tax rate in 1901 was $14.35 per $1,000. The indebtedness of Providence practically represents the cost of her modern improvements. Since 1891 the bonds of the city have commanded a higher premium than those of any other New England city.

In the matter of street railroad transportation Providence has made marvelous progress. In 1901 the mileage of one company alone was increased 10 miles, making 260 miles of track operated by that company. Other companies made extensions, and during the year 1901 general improvements, such as the construction of new shops, car and power, were made by the street railway companies of Providence, and freight or express service was introduced upon the tracks of the system between Providence and villages throughout the State of Rhode Island. Practically the entire State is now admirably equipped with a splendid system of electric railways, the natural center of this traffic, of course, being the city of Providence. On the line between Providence and Fall River, Mass., electricity has been substituted for steam with excellent results. Altogether, rapid transit facilities in and surrounding Providence, and extending into the adjoining States of Connecticut and Massachusetts, form a system which can not be excelled, if equaled, in any other part of the country.

I have referred to the number of school buildings in Providence and to the number of pupils. The schools are admirably conducted. Brown University is a name synonymous with that of Providence. The mention of one suggests thought of the other. This great seat of learning was founded in 1764. It was in this institution that the first seeds of religious toleration took root. The university has been administered from the beginning in the most broad-minded spirit, and its influence and power have increased steadily until it is now recognized as one of the foremost colleges in this country. The buildings of the university are clustered picturesquely on a high hill overlooking the city from the east.

Friend's School, widely known as an excellent preparatory school, is another important educational establishment in Providence. In addition to a large number of private and parochial schools, the State has two educational institutions located in Providence—the State Normal School and the State Home and School. Of the city schools the most prominent are the English High School, the Classical High School, and the Hope Street High School. Fifteen grammar schools, 68 primary schools, and 24 kindergarten schools complete an educational system from the lowest to the highest branches perfect in every detail.

The libraries of Providence are important educational factors. Chief among them is the Providence Free Public Library, which by excellent management is brought into close relations with the people. This library has a handsome, thoroughly equipped, and modern home. Other libraries are the Franklin Lyceum, Booklovers', Brown University, Olneyville Free Library, Providence Athenaeum, Young Men's and Women's Christian Association, Horticultural Society, Medical Society, State Law, State Library, and others, all of which contribute abundantly to the entertainment, edification, and education of the people.

There are 136 regularly organized religious congregations, missions, etc., in the city of Providence, many of which occupy large and imposing edifices of handsome architectural design.

Providence abounds in a great variety of institutions, such as charitable, benevolent, religious, and secret societies, military and educational organizations and social clubs, numbering in all 483. Many halls, some of them large and costly, accommodate these various institutions. Nineteen national banks are located in Providence, with a total capitalization of $10,525,000. State banks in Providence have a total capital of $741,675. Altogether there are 38 public banking institutions in Providence, besides a number of private banks. The newspapers in the city—daily, weekly, and monthly, including periodicals and magazines—are 34 in number. Seven first-class theaters furnish amusement for the people.

Elsewhere I have incidentally referred to the manufactures of Providence in connection with its commerce. In her manufactures Providence is unique. It is to this branch of industry that she owes her advancement more than to any other. The introduction of the cotton manufacture toward the close of the eighteenth century laid the foundation for other industries which afterwards started in Providence, and which have since grown to large proportions. The manufacture of engines, mill supplies, and machinery followed the extension of the chief industry, and following in their wake came the manufacture of woolens, locomotives, files, jewelry, silverware, screws, and many minor industries, because of the facilities at hand. Thus great industries were established and developed until to-day Providence manufactures everything from a bone collar button to a locomotive.

Providence is the birthplace of the jewelry industry. Silverware is another of its important industries, as are the manufacture of boilers, engines, and files. These several industries are

especially and interestingly treated in the Twelfth Census Bulletin on Manufactures, as follows:

Rhode Island, and especially the city of Providence, has long been prominent in the manufacture of jewelry, which, next to the textiles, is the most important industry in the State. All varieties and grades of jewelry are produced. The industry dates back to the Revolution, but it was the ingenuity of a Providence goldsmith in 1794 which firmly established it in that city. While manufacturers in Newark and New York City were turning out products of pure gold and silver, wrought by hand, Nehemiah Dodge invented a process for "filling" the gold with cheaper materials, and at about the same time applied machinery to the manufacture. The process by which this much cheaper product was obtained soon became known to other manufacturers in the city and was carried across the State line to Attleboro, Mass., a town which now rivals Providence in this industry.

The reputation of Providence in this branch of manufactures attracted a skilled workman in the precious metals from Birmingham, England, in 1846, one Thomas H. Lowe, who improved the filling process, thus further reducing the cost of manufacture. In the year 1812 the jewelry manufactures of the city of Providence were valued at $100,000. In 1856 the product amounted to $2,696,000, while in the present census there are 214 establishments engaged in this industry, with a capital of $8,899,702, and giving employment to 4,877 wage-earners, having a product valued at $13,320,620. During the decade from 1890 to 1900 the capital employed in the industry increased from $6,095,971 to $8,899,702, or 46 per cent; the product from $8,011,067 to $13,320,620, or 63.3 per cent; and wages from $2,110,529 to $3,170,932, or 50.2 per cent. In the census of 1890 it appears that one-fifth of the product of the jewelry industry of the country was manufactured in the city of Providence. The cities next in importance were New York, Newark, and Philadelphia; but nearly as many employees were reported for Providence as for those three cities combined.

Allied to the jewelry manufacture is the manufacture of silverware. It was an apprentice of the founder of the jewelry industry who began the manufacture of silverware in Providence and founded what is now one of the largest establishments in this line of manufacture in the world. The census of 1890 shows that at that time nearly one-half of the silverware manufacturing of the United States was carried on in Rhode Island. There were 8 establishments in the State engaged in this industry in 1900, all located in Providence, with a capital of $5,127,714, an increase over 1890 of $2,125,482, or 70.8 per cent. These establishments give employment to 1,540 wage-earners, to whom $978,198 was paid in wages, and their product was valued at $3,834,408, an increase of $1,324,539 since 1890, or 52.8 per cent.

The refining of gold and silver sweepings is closely dependent upon the two industries just described. Until 1850 the material used in this industry was allowed to go to waste. There are 10 establishments in the State engaged in this industry, all located in Providence, with an invested capital of $505,957, and a product valued at $3,484,454.

The demand for machinery in the textile and jewelry factories of Rhode Island early stimulated the manufacture of machinery, an industry third in importance in the State. During the decade from 1890 to 1900 the capital invested in the foundries and machine shops increased from $11,377,475 to $16,403,935, or 44. 2 per cent; the number of wage-earners, from 6,876 to 8,799, or 28 per cent; the total amount of wages, from $3,813,290 to $4,638,507, or 21.6 per cent; and the value of products, from $10,170,286 to $13,269,086, or 30.5 per cent. Included in this classification is the manufacture of engines and boilers, a specialty for which Providence has a world-wide reputation and in which its preeminence is partly due to the early application of steam to manufacturing in this State. In 1812 and 1814 several factories were equipped with engines brought from Philadelphia, but the great expense of transportation and the increasing demand induced local mechanics to embark in this manufacture with the result that the first engine shop in the State was erected in 1826.

In 1839 the manufacture of files was begun in Providence, but it was to the invention by a local mechanic in 1864 of machinery for this manufacture, that the present importance of this industry in the city is due. The product of the industry in 1900 amounted to $1,033,838.

In Providence there were, in 1900, 1,933 manufacturing establishments, or 46.1 per cent of the entire number located within the State of Rhode Island. Of the wage-earners 42,693, or 44.2 per cent of all in the State, were employed in Providence. These wage-earners formed 24.3 per cent of the entire population of the city and 10 per cent of the population of the State. In 1900 the total amount of wages paid in Providence amounted to $19,998,362, or 48.6 per cent of all wages paid in the State. The value of products, including custom work and repairing for the city during 1900, was $88,168,897, or 47.9 per cent of the total product of the State. I will append to my remarks tables showing the manufactures of Providence by specified industries, according to the census of 1900.

Now, Mr. Speaker, the facts and statistics which I have presented as briefly as possible all go to make up a wonderful record of the natural growth of the city of Providence. They could possibly be elaborated and augmented, but I think I have submitted abundant testimony in support of the long pending and finally recognized claim of Providence for a Federal building commensurate with the city's prominent position among the great cities of America in all things that combine to make our municipalities great.

I can not close without a word of hearty thanks for the untiring, self-sacrificing labors of my friend and colleague [Mr. CAPRON] in behalf of a public building for Providence. During my recent illness he devoted much of his time to the cause, and although himself representing two cities desirous of public buildings, with broad-minded generosity which characterizes him, he recognized the more important and prior claims of our metropolis and permitted not his own interests to interfere with the consummation of our efforts.

Mr. Speaker, I am grateful in the name of a long-suffering people for the belated and anticipated favorable action of this House. The law we are about to pass providing public buildings in certain cities will result in a few years in the filling of a long-felt want in the magnificent city of Providence, and the General Government in the years to come will have a home there in which our own people and the "strangers within our gates" may have a patriotic and just pride.

Manufactures of Providence, R. I., by specified industries, census of 1900.

Manufacturing and mechanical industries.	Number of establishments.	Capital.					Proprietors and firm members.	Salaried officials, clerks, etc.		Average number of wage-earners and total wages.

The Late Representative J. William Stokes, of South Carolina.

REMARKS

OF

HON. JOHN H. SMALL,

OF NORTH CAROLINA,

IN THE HOUSE OF REPRESENTATIVES,

Saturday April 26, 1902.

The House having under consideration the following resolutions:

Resolved, That the business of the House be now suspended that opportunity may be given for tributes to the memory of Hon. J. William Stokes, late a member of the House of Representatives from the State of South Carolina.

Resolved, That as a particular mark of respect to the memory of the deceased, and in recognition of his eminent abilities as a distinguished public servant, the House, at the conclusion of these memorial proceedings, shall stand adjourned.

Resolved, That the Clerk communicate these resolutions to the Senate.

Resolved, That the Clerk be instructed to send a copy of these resolutions to the family of the deceased—

Mr. SMALL said:

Mr. SPEAKER: On this day, when we have come to pay a tribute to the memory of our friend, I believe that my own emotions would receive greater satisfaction if I could visit the new-made grave in his native State and lay thereon a modest wreath and silently recall his virtues and recount our loss and that of his State. Words are so often vain things. They may conceal the emotions or they may express the sincerest sorrow; they may be insincere or they may come as utterances warm and pathetic from the true heart; they may be cold and impassive or warm and impulsive; they may conceal thought or they may be the acme of candor and truth. While it is only natural to approach the bier with reverence and solemnity, and the impulse of every manly heart is to speak nothing but good of the dead, yet undue laudation and the painting of an ideal life are equally to be avoided. How wise and satisfying a course it would be if we should speak of the living nothing that we would be unwilling to speak of the dead. This rule of conduct would not only promote our own happiness, but would remove so many of the rancors, the acerbities, and the disagreeable episodes which so often beset the living, particularly those whose ambitions and activities bring them to the front and keep them in the public eye.

Dr. STOKES, as his colleagues loved to call him, perhaps came near exemplifying this rule in his daily life. I can not recall in my association with him during the Fifty-sixth Congress, and it was my pleasure to be his friend and to some extent his companion, that I ever heard him utter an unkind word about any one. Being a man of culture and information and high mental training, he entertained clear-cut opinions upon public questions and had the courage and the ability to maintain them; but his differences arose from reflection and judgment, and being honest and candid himself he never questioned the motives of those with whom he differed.

The only life worth living is that which is stirred by ambition and which is fortified and promoted by industry. But the object must be worthy and the methods must be honorable. After all the main purpose sought is contentment and happiness. Some follow a mistaken ideal and never reach the goal. Wealth, position, and power do not always bring these two jewels. He who carries sunshine along the pathway, who speaks a kind word of encouragement to the disconsolate, who condoles with sorrow, who remembers the poor, who encourages the struggling, who raises the fallen, who stands by the right because it is right, he it is who has found contentment and happiness and whose life is radiant and beautiful. The man who thus tempers his ambition and curbs his will finds genuine pleasure in suecess and the world rejoices with him in his daily progress.

I believe that Dr. STOKES thus found the true source of happiness. Who of us does not recall his sunny disposition and his cheerful manner. In addition he had that mental equipoise and ready self-control which made him a choice comrade and a valuable ally. His loyalty to his friends was not less conspicuous than his adherence to his convictions.

I shall not dwell upon the varying steps in the career of Dr. STOKES. The adverse conditions of his youth and early manhood, his loving patience and wisdom as a teacher, his political career and promotion in the politics of his native State, his incisive and brave work as an editor, the culmination of his public life in this House, and the example of his daily life as a Christian have been aptly and interestingly portrayed by his worthy successor [Mr. LEVER].

I can not close this imperfect tribute without a reference to our friend in his daily life as the faithful and loyal husband. My acquaintance with the wife was scarcely less intimate than with him as husband. The home and the hearthstone are the basis of a nation's greatness. Marriage is the institution blessed of all and happy are those whose fortunes and aspirations are twined into one loving embrace and who thus tread life's pathway. Charity to the imperfections of the other, loving patience and kindness, loyalty in sickness and in health, loving ministrations one to the other, loyalty and fortitude in adversity, and mutual joy in the hours of prosperity, all crowned with steadfast love—these are the characteristics of a happy union. Nothing is more beautiful to contemplate. Such a marriage is a benediction to all.

I have observed many men in the relation of husband and I may say in all candor that I never observed a more beautiful life in this respect than that of Dr. STOKES. He was tender and considerate in his daily life and never forgot the little attentions and courtesies and thoughtful remembrances which always appeal to the gentle wife and evoke the sweetest emotions. While always the ideal husband, yet when illness came to the partner of his bosom his devotion was unusually constant and to his friends a source of inspiration.

We know that we have lost a friend and his State a valuable representative, but this loss is incomparable to that of the wife. For her I pray that the tender memories of the past may sustain and comfort the sad and lonely days of the future.

A good woman who knew both the husband and the wife has handed me the following quotation, which fittingly describes this beautiful union and the sad parting:

"Sometimes into two hearts great enough to hold it and into two souls where it may forever abide, there comes the Everlasting Love. It is elemental like the fire and the sea, with the depth and the splendor of the surge and the glory of the flame. It makes the world a vast cathedral, in which the two may worship, and where even in the darkness there is the peace which passeth all understanding, because it is of God.

"When the time of parting comes, for there is always that turning in the road, the sadness is not so great because one must go on alone. Life grows beautiful after a time and even wholly sweet, when a man and a woman have so lived and loved and worked together, that death is not good-bye, but rather 'auf wiedersehen.'"

Eulogy on Death of Hon. Peter J. Otey.

REMARKS

OF

HON. THAD. M. MAHON,

OF PENNSYLVANIA,

IN THE HOUSE OF REPRESENTATIVES,

Sunday, June 29, 1902.

Resolved, That as a mark of respect to the Hon. PETER J. OTEY, late a member of this House from the State of Virginia, and in pursuance of the order of the House heretofore made, the business of the House be now suspended to enable his associates to pay fitting tribute to his high character and distinguished services.

Resolved, That the Clerk communicate these resolutions to the Senate.

Resolved, That as an additional mark of respect at the conclusion of these exercises the House do adjourn.

Resolved, That the Clerk be, and he is hereby, instructed to send a copy of these resolutions to the family of the deceased.

Mr. MAHON said:

Mr. SPEAKER: I can not let pass this opportunity to pay a short tribute to our late associate and my personal friend, PETER JOHNSON OTEY. I became acquainted with him in the early days of the Fifty-fourth Congress, when he first entered this honorable assemblage. Although differing in political faith and having fought on opposite sides in the great conflict between the States, our acquaintance soon ripened into the warmest friendship. I found him at all times to be a loyal friend, true to his country, true to his party, true to his State, true to his friends, and, above everything else, true to himself.

He led a life of simplicity, one free from ostentation. His paramount thought seemed to be his duty to his constituents; and without disparagement to any other member of this House it can be truthfully said that no one devoted more labor and painstaking efforts to the interests of his district than did Major OTEY. Frequently have I seen him working far into the night on the multifarious duties which fall to the lot of a member of Congress. Among his numerous virtues, were I to select one that was preeminent it would be the sacredness with which he regarded the fulfillment of a promise. His word once given could be relied upon implicitly. No matter how trivial the attendant circum-

stance nor how small the detail, his promise invariably resulted in his best efforts toward its accomplishment.

Among his many public acts none will be more conspicuous than the opportunity for relief afforded to suffering soldiers by the establishment of a dental corps in the Army, which, as we all know, was largely brought about by his indefatigable efforts. When he arose to speak on any subject on the floor of this House, he commanded the respectful attention of all. On many occasions his infectious good humor and brilliant flashes of wit have enlivened the usually monotonous proceedings. His wit was not of the kind that hurt or carried with it a sting, for in all his public utterances we have never heard him speak one word derogatory to any man. In his private life even those who knew him best never heard from him of the many acts of kindness which he performed nor of the helping hand which he lent to those in trouble. No one ever appealed to him for assistance and was turned away.

Unselfish, pure in mind, devoted to duty, a loving husband and father, a devoted friend was PETER J. OTEY; surely his epitaph should be "Faithful in all things."

Mr. Speaker, in closing these remarks, I can not refrain from expressing my heartfelt sympathy for his devoted wife, whose untiring help in sunshine and shadow was, as Major OTEY frequently remarked, the secret of his success.

Soldiers' Home in Alabama.

SPEECH

OF

HON. CHARLES W. THOMPSON,

OF ALABAMA,

IN THE HOUSE OF REPRESENTATIVES,

Tuesday, June 24, 1902,

On the bill (H. R. 14920) to establish a Soldiers' Home in Alabama.

Mr. THOMPSON said:

Mr. SPEAKER: I desire to submit a few brief remarks on the bill I introduced providing for the establishment and maintenance of a Soldiers' Home in the Fifth Alabama district, which I have the honor to represent.

I am well aware that such a proposition as this is calculated to provoke objection and arouse antagonism at first blush, particularly among my Southern brethren. Men do not easily discard their lifelong prejudices and habits of thought. Much opposition has been expressed already on this floor, early in the session, to ideas or sentiments similar to those which I am now advancing. But I am convinced that calm, dispassionate, and mature reflection will eventually cause all good and patriotic American fellow-citizens to adopt the views of those who believe, with Lincoln, with Grant, with McKinley, and with Roosevelt, that we are in very truth a nation of brothers, and that brotherly love should be the impelling force in all our mutual transactions.

I do not hesitate to claim that the grandest, most beautiful, most touching event in the world's history since the Gospel story was told is the reconciliation of the North and the South and the reunion of these United States of America.

For four long and bitter years this country endured the agony of civil strife and fratricidal combat in the greatest, bloodiest, most terrible war on record. I do not need to dwell on the dreadful details of that conflict between the States. The pension rolls, the Soldiers' Homes, the military cemeteries bear daily witness to its awful dimensions. Eloquent witnesses also are the Grand Army of the Republic meetings and such gatherings as that of the Confederate veterans recently at Dallas, Tex., where, under the lead of the gallant General Gordon, there were to be seen marching together once more, shoulder to shoulder, the few remaining thousands of that great army of Southern men who in their youth had faced the Federal shot and shell on a hundred fields.

I am reminded here of what Judge Rice, an able lawyer and jurist of my State, said when the war between the States was first being agitated. He said: "Yes; fight them. We can whip them with pop guns." After the war was over, and our boys came home, battle scarred, halt, and lame, some one said to Judge Rice, "I thought you said we could whip the Yankees with pop guns." "Yes," said the Judge, "I did say so, but the darn rascals would not fight that way."

That war was forty years ago. We see among us here to-day a few of its honored veterans—honored alike, whether they wore the blue or the gray. But to most of us that conflict is only a shadowy memory of childhood or a tradition. To all of us, however, its results are a serious and important reality. Its results have been manifold—some of them sorrowful, some joyful. One of the first sorrowful results was a legacy of mutual distrust and hate between the South and the North. This was perfectly natural at first, and in foreign nations it was a matter of great wonder that the mutual antipathy extended no further than it did. The general expectation abroad was that the country could never again become really reunited: that the recent foes in battle array would remain foes in spirit always. This the foreign powers not only expected, but also ardently desired.

Little did they know the stuff that Americans are made of. Until America taught the world a better lesson it was the invariable rule that the victor took everything and the loser lost everything. That was the rule in the old biblical wars, in the Macedonian, Persian, Greek, and Roman wars, in the War of the Roses, in the wars of Charlemagne, of Frederick the Great, of Peter the Great, of Marlborough, of Napoleon. Never before had there ever been heard or uttered such sentiments as those of Lincoln in his inaugural addresses; never before had a victorious general spoken or acted like Grant at Appomattox. The South fully appreciated the magnanimity which, after the first mistakes of reconstruction were abandoned, the North manifested toward their late foes, a magnanimity never equaled in history except by the similar magnanimity shown by the Southerners in accepting the situation in good faith and uncomplainingly resigning themselves to the loss of all that they had held so dear.

Nevertheless it was long—almost, if not quite, the length of a generation—before the mutual distrust and unfriendliness between the two sections died out. The American character being what it is, reconciliation was bound to come before very long, and now, thanks be to God, it has come.

The great Lincoln was its first advocate and prophet. He always maintained that the Union had never in fact been dissolved and that it must again become in spirit reunited. While almost all others were indulging feelings of the most intense animosity, and while the conflict was still raging, he could say such words as these to all his countrymen, South and North:

> We are not enemies, but friends. We must not be enemies. Though passion may have strained, it must not break our bonds of affection. The mystic chords of memory, stretching from every battlefield and patriot grave to every living heart and hearthstone all over this broad land, will yet swell the chorus of the Union, when again touched, as surely they will be by the better angels of our nature.

"As surely they will be?" Aye, indeed, was not Lincoln a true prophet? For surely they have been.

And again:

> With malice toward none, with charity for all, with firmness in the right as God gives us to see the right, let us strive on to finish the work we are in, to bind up the nation's wounds, to care for him who shall have borne the battle and for his widow and his orphan, to do all which may achieve and cherish a just and lasting peace among ourselves and with all nations.

"To bind up the nation's wounds." In Lincoln's mind the "nation" meant the whole country—South as well as North. Nothing is better settled in history than that he intended to treat both sections alike after the war. In his view, the North and the South were brothers who had quarreled, and as soon as possible he wished full fraternal relations to be reestablished. He would have "bound up the wounds" of the Confederate soldier as well as of the Federal soldier. And if that great and good man were alive to-day, I firmly believe he would be the chief and foremost advocate of all measures designed to extend the protecting care of the General Government to all sections alike, and to bring together under the same roof the heroic veteran in blue and the heroic veteran in gray.

Was not Grant almost as much of a prophet? Will the South, will the North, will the world ever forget what he did and said at Appomattox, in the hour of triumph, and before the sun had set on the day of his final victory—how he handed back to Lee his surrendered sword, and told Lee's soldier's to keep their horses because they would need them for the spring plowing; or how, out of the generosity of his heart, he ordered his commissary to issue rations to as many of the Confederates as needed them from the supplies belonging to and furnished by the Federal Government, even though it might put his own troops on short allowance? The keynote of this great soldier's sentiment was not the keynote of Alexander or of Napoleon—his keynote was: "Let us have peace."

Now, in these our later times the prophesies and wishes of these early leaders of the people have found fulfillment. In the course of time another war menaced this country—a war with a foreign country and in behalf of an oppressed neighbor. This was all that was still needed to solidify the reunion of the States. Was it not a joyful, an inspiring sight to see the old boys in blue and old boys in gray, and the sons of both, marching again together as in the days of the wars with England and the Mexican war, keeping step to the music of the Union, no matter whether the band played Yankee Doodle or Dixie? Since the Spanish war this nation has been in very truth a reunited nation, and the

utter failure since then of all partisan attempts to fan the old embers of strife into flame only proves how strong the new bonds of union and affection are. It is all one now, whether we wore the blue or the gray. We both firmly believed we were right and both fought as hard as we could, and both would now fight equally hard, side by side, in defense of the Union, and would die for it with equal willingness.

That being the case, why should there not be established, as a memorial of the national reconciliation, a joint Soldier's Home, applicable to all United States veterans—veterans of the Spanish war, veterans of the civil war, veterans of the Mexican war, and of the Indian wars? Why should the ex-Confederates be excluded from such a home, or why should they refuse to enter such a home? Is this not their country? Did not many of them fight for it in the Spanish war, and would not all of them have gladly done likewise if not incapacitated by age or infirmity? Suppose General Wheeler or Gen. Fitzhugh Lee were reduced to extremities, could they not be sheltered properly by a United States Soldiers' Home as veterans of the Spanish war? But are they not Confederate veterans as well?

In the recent past there have been Presidential utterances of a similar vein, fit to rank with those I have just quoted. Need I explain that I refer to the lamented and beloved President McKinley's remarks on his Southern tour in 1898. Nothing that President McKinley ever said so endeared him to the South and to the whole country, or so clearly proved his true patriotism and his kindly disposition, as the speeches which he made at Atlanta and Montgomery on that tour. Let us recall to mind his eloquent remarks in the auditorium at Atlanta:

Under hostile fire on a foreign soil, fighting in a common cause, the memory of old disagreements has faded into history. From camp and campaign there comes the magic healing which has closed ancient wounds and effaced their scars. For this result every American patriot will forever rejoice. It is no small indemnity for the cost of the war.

This Government has proved itself invincible in the recent war, and out of it has come a nation which will remain indivisible forevermore. No worthier contributions have been made in patriotism and in men than by the people of the Southern States. When at last the opportunity came they were eager to meet it, and with promptness responded to the call of country. Intrusted with the able leadership of men dear to them, who had marched with their fathers under another flag, now fighting under the old flag again, they have gloriously helped to defend its spotless folds and added new luster to its shining stars. That flag has been planted in two hemispheres, and there it remains, the symbol of liberty and law, of peace and progress.

The victory we celebrate is not that of a ruler, a President, or a Congress, but of the people.

And again:

Sectional lines no longer mar the map of the United States. Sectional feeling no longer holds back the love we bear each other. Fraternity is the national anthem, sung by a chorus of forty-five States and our Territories at home and beyond the seas. The Union is once more the common altar of our love and loyalty, our devotion and sacrifice. The old flag again waves over us in peace, with new glories which your sons and ours have this year added to its sacred folds.

What an army of silent sentinels we have, and with what loving care their graves are kept! Every soldier's grave that was made during our unfortunate civil war is a tribute to American valor. And while, when those graves were made, we differed widely about the future of this Government, those differences were long ago settled by the arbitrament of arms; and the time has now come, in the evolution of sentiment and feeling under the providence of God, when in the spirit of fraternity we should share with you in the care of the graves of the Confederate soldiers.

The cordial feeling now happily existing between the North and South prompts this gracious act, and if it needed further justification it is found in the gallant loyalty to the Union and the flag so conspicuously shown in the year just past by the sons and grandsons of these heroic dead.

What a glorious future awaits us if unitedly, wisely, and bravely we face the new problems now pressing upon us, determined to solve them for right and humanity!

Reunited—one country again and one country forever! Proclaim it from the press and the pulpit; teach it in the schools; write it across the skies! The world sees and feels it; it cheers every heart North and South and brightens the life of every American home! Let nothing ever strain it again! At peace with all the world and with each other, what can stand in the pathway of our progress and prosperity?

It was my privilege, in my capacity as a member of the Alabama senate, to be present when President McKinley was received at the capital at Montgomery, and to hear his speech on that occasion. Like all his other Southern speeches, it produced a profound impression and convinced all of his hearers that he was one of the grandest exponents of American statesmanship then living, and an American of the Americans. Among other things he said:

To be welcomed here in the city of Montgomery, the first capital of the Confederate States—warmly and enthusiastically welcomed as the President of the United States, the President of a common country—has filled me and thrilled me with emotion. Once the capital of the Confederacy, now the capital of a great State, one of the indestructible States of an indestructible Union.

The governor says he has nothing to take back. We have nothing to take back for having kept you in the Union. We are glad you did not go out and you are glad you stayed in.

Alabama, like all the States of the Union, North and South, has been loyal to the flag and steadfastly devoted to the American name and to American honor. There never has been in the history of the United States such a demonstration of patriotism, from one end of the country to the other, as in the year just passing: and never has American valor been more brilliantly illustrated in the battle line on shore and on the battle ship at sea than by the soldiers and sailors of the United States.

Upon the field of Antietam President McKinley again alluded to this theme, and said:

Standing here to-day, one reflection only has crowded my mind—the difference between this scene and that of thirty-eight years ago. Then the men who wore the blue and the men who wore the gray greeted each other with shot and shell, and visited death upon their respective ranks. We meet, after all these intervening years, with but one sentiment—that of loyalty to the Government of the United States, love of our flag and our free institutions, and determined, men of the North and men of the South, to make any sacrifice for the honor and perpetuity of the American nation.

It was by such utterances as these, in behalf of the obliteration of sectional distinctions and prejudices, and characterized by such genuine patriotism and overflowing love for the whole country, that President McKinley attained the exalted position in the affection and esteem of his fellow-citizens of all sections and all parties which he enjoyed at the time of his mournful death, and which will pertain to his memory forevermore.

It is also fresh in the memory of all how our present Chief Magistrate, President Roosevelt, happily and worthily expressed similar sentiments at the Charleston banquet, saying:

Around this table I see many men who took part in the great war. The war in which the younger among us here took part was a very little one, because it did not have to be any bigger. But it had one thoroughly good effect; it put the cap on the structure that had been building while we were almost unconscious of it, and it taught us how thoroughly at one we were. When we got through that war it did not make a bit of difference to us whether it was an admiral who came from Vermont, or a lieutenant who came from Alabama, if the man had done his duty in such shape as to make us each feel an even more generous thrill of pride in our common nationality. The debt that we owed him had little to do with the section from which he came.

And again, in his Exposition speech:

With delicate and thoughtful courtesy you originally asked me to come to this exposition on the birthday of Abraham Lincoln. The invitation not only showed a fine generosity and manliness in you, my hosts, but it also emphasized as hardly anything else could have emphasized how completely we are now a united people. The wounds left by the great civil war, incomparably the greatest war of modern times, have healed, and its memories are now priceless heritages of honor alike to the North and to the South. The devotion, the self-sacrifice, the steadfast resolution and lofty daring, the high devotion to the right as each man saw it, whether Northerner or Southerner—all these qualities of the men and women of the early sixties now shine luminous and brilliant before our eyes, while the mists of anger and hatred that once dimmed them have passed away forever.

All of us, North and South, can glory in the valor of the men who wore the gray. Those were iron times, and only iron men could fight to its terrible finish the giant struggle between the hosts of Grant and Lee. To us of the present day, and to our children, and to our children's children, the valiant deeds, the high endeavor and abnegation of self shown in that struggle by those who took part therein will remain forevermore to mark the level to which we in our turn must rise whenever the hour of the nation's need may come.

When four years ago this nation was compelled to face a foreign foe the completeness of the reunion became instantly and strikingly evident. The war was not one which called for the exercise of more than an insignificant fraction of our strength, and the strain put upon us was slight indeed compared with the results. But it was a satisfactory thing to see the way in which the sons of the soldier of the Union and of the soldier of the Confederacy leaped eagerly forward, emulous to show in brotherly rivalry the qualities which had won renown for their fathers, the men of the great war. * * * And now, in closing, I am going to paraphrase something said by Governor Aycock last night. I have dwelt to-day upon the fact that we are united, a reunited people; that we are united and forever one people. The time was when one could not have made that statement with truth; now it can be truthfully said. There was a time when it was necessary to keep saying it, because it was already true, and because the assertion of it made it more true. But the time is at hand, I think the time is come, when it is not necessary to say it again.

Proud of the South? Of course we are proud of the South. Proud of your great deeds? Of course I am proud of your great deeds, for you are my people.

Another evidence of this lofty and noble sentiment, this good fellowship and brotherly esteem, was beautifully and impressively expressed by Representative S. S. BARNEY, of Wisconsin, one of the distinguished members of the "Thompson Congressional party," that recently toured Alabama to study the race question, who said in his speech at Montgomery, the capital of our beloved State:

While passing through your beautiful capitol I saw where your fair women had inclosed in glass cases the old battle-worn and shot-riddled flags which were carried by your brave sons upon the bloody fields of the great war. This is cultivating a proper sentiment and it is right to preserve these silent but convincing witnesses of the heroic valor of the men who fought and died under those tattered folds.

It called to my mind how I had seen in the capitol of my State similar provisions to preserve these silent witnesses of the patriotism and heroic valor of the sons of the Badger State who had fought and died beneath the Stars and Stripes for the preservation of the Union. All of these men fought for what they believed was right, and their valor is entitled to this recognition.

No government can hope to live long which does not cherish the memory of its heroes. As I now look into the faces of these loyal sons and daughters of the State of Alabama and see that starry banner above us and now floating over all the States, the thought comes to me that some time a temple will be built midway between the North and South, and the veterans of that war left will carry all those flags and fold them together and lay them tenderly away as a lasting memento that we are more firmly united than ever before and are bound together by ties of love and friendship light as air but as strong as links of steel.

Now, it is important to understand and recognize the spirit which has animated all these words and deeds of good will thus offered on the part of the North toward the South. The spirit has not been the spirit of condescension, not the spirit of lofty patronage, not the spirit of almsgiving, not even the spirit of mere sympathy; it has been the spirit of true hospitality, both on the part of the North and of the South—the same spirit which makes a friend free of one's house and home, or which prompts a neighbor to help his neighbor over a rough place in his work, sure of receiving a

reciprocal favor when needed. True hospitality, true neighborliness, true fraternal feeling, that is the sentiment animating the hearts of all good Americans, North and South, to-day; and the rise of the resistless tide of this sacred sentiment in all our hearts has forever swept away the old rancorous, bitter sentiments of the dark, dismal past.

What better, what nobler, what more appropriate outward and visible expression of this new national sentiment could there be than the establishment of a National Soldiers' Home for the use of Union and Confederate veterans alike and for the veterans of all our wars, from whatever section of the country they may hail? It would be highly appropriate, it seems to me, that the President of these whole United States should be the one to supervise this matter, through a commission appointed by him, to locate, erect, and maintain such an institution. I remember in this connection that Captain Falkner, formerly of the Confederate Army, has recently offered 100 acres of land in or near Montgomery, Ala., for the establishment of a home for Confederate veterans; and I think that doubtless his innate chivalry and generosity of heart would prompt him to include Union veterans among the beneficiaries of the institution if the idea were called to his attention.

The new reunion between the South and the North has had a striking manifestation, not merely in warlike pursuits alone, but in peaceful pursuits as well. The phenomenal increase of late in the manufacturing industries of the South has been due in part to the combination of Northern men and Northern capital with Southern men and Southern capital. Tens of millions of such capital have lately been invested in new cotton mills and other manufacturing enterprises in the Southern States, the output of which now constitutes the bulk of our national exports to some countries, notably China. In my own State of Alabama I need only specify the very large new cotton manufacturing plants at Cordova, Alabama City, and other places, the immense car works and iron works at Anniston and Birmingham, and such great lumber plants as that at Hollins, Clay County, where, by the way, there are employed several hundred men, including quite a large number of old Union soldiers, who are now drawing pensions from the Government.

I do not need to dwell on these details. They have become familiar to you and to the country through the newspapers, the reports of commercial bodies, and the census bulletins.

Through all these legends of war and peace one central idea, one central sentiment, runs: We are again, thank God, one people, united in heart and in mind and in soul, and in the strength of that unity we can stand up before the nations and defy the world to injure us.

It was only the other day, Mr. Speaker, that this House did a graceful and becoming act in passing unanimously the bill to donate to the State of Alabama two masts taken from Spanish battle ships captured in the recent war by that noble Alabama hero Richmond Pearson Hobson. As explained by my honored colleague from the Montgomery district, the Hon. A. A. WILEY, these masts are intended to be permanently erected in the first capital of the Confederacy—and for what purpose? For no other purpose than to bear aloft and fling to the breeze the flag of the United States in the very place where the Confederate flag was first raised over the official representatives of the Confederate States. Surely that is an inspiring thought—inspiring alike to both sections of the Union. The flag which former generations of Americans followed in former wars and which this generation has followed in the last war is the flag of our common country, the flag of Alabama as well as the flag of Massachusetts, and under its folds the men of the South will henceforth march shoulder to shoulder with the men of the North against the foe. [Applause.]

Another topic, Mr. Speaker, suggests itself to me in this connection. It may be said, with almost if not quite literal truth, of the United States flag now, as it is said of the British flag, that the sun never sets upon it. When the sun is setting in San Francisco it is rising at Manila, and when it is setting at Manila it is at least preparing to rise at Eastport. Yea, our flag floats aloft over the Philippines, and if the policies so ably advocated by that lovable and pure-hearted President, the late lamented McKinley, had been carried out, no one would have just cause to pull down that flag. I quote a few paragraphs from McKinley's memorable speech before the Home Market Club at Boston, February 16, 1899, upon the future of the Philippines:

> Our concern was not for territory or trade or empire, but for the people whose interests and destiny, without our willing it, had been put in our hand. It was with this feeling that from the first day to the last not one word or line went from the Executive in Washington to our military and naval commanders at Manila or to our peace commissioners at Paris that did not put as the sole purpose to be kept in mind, first after the success of our arms and the maintenance of our honor, the welfare and happiness and the rights of the inhabitants of the Philippine Islands.

Are we not going, Mr. Speaker, in the direction of forgetfulness of the Filipinos' rights and of violation of the spirit of this lofty declaration? I quote again:

> Unless Congress shall direct otherwise, it will be the duty of the Executive to possess and hold the Philippines, giving to the people thereof peace and order and beneficent government, affording them every opportunity to prosecute their lawful pursuits, encouraging them in thrift and industry, making them feel and know that we are their friends, not their enemies; that their good is our aim; that their welfare is our welfare, but that neither their aspirations nor ours can be realized until our authority is acknowledged and unquestioned.

Again:

> That the inhabitants of the Philippines will be benefited by this Republic is my unshaken belief. That they will have a kindlier government under our guidance, and that they will be aided in every possible way to be a self-respecting and self-governing people is as true as that the American people love liberty and have an abiding faith in their own Government and in their own institutions. No imperial designs lurk in the American mind. They are alien to American sentiments, thought, and purpose. Our priceless principles undergo no change under a tropical sun. They go with the flag.

I regret that this generous and ennobling policy of the late martyred President has not been followed. Unfortunately, some of our commanders in the Philippines have pursued methods of warfare unnecessarily cruel and barbarous, so that we read about them as under the spell of some hideous dream. By these methods the name of America has succeeded to the deadliest hatred heaped upon Spain. This would not have been true under the McKinley policy. Besides, the civil branch of the government of the islands has been preposterously expensive, extravagant, and inefficient. We have given the Filipinos still further cause for disliking us by arranging to legally rob them by means of an unfair and unjust tariff law. This Philippine tariff has been enacted in opposition to all considerations of moral right and constitutional authority. The Republicans in this case have kept up their time-honored practice in the matter of levying tariff taxes most heavily upon those least able to bear them. They have overridden the Constitution in the case of Porto Rico and in the case of the Philippines. They have been overriding the Constitution over since the party was born. They have even boasted of it as a sort of badge of independence and progress.

But why should they hesitate about such a little thing as the constitutionality of the Philippine tariff act? They have made a great ado about "hauling down the flag" in the Philippines, but they have not in the least scrupled to haul down the Constitution in the Philippines. For my own part, I believe in upholding both the flag and the Constitution in those islands. To the Republicans, in their treatment of the Constitution, may well be applied the stinging rebuke of the poet Holmes to those who many years ago proposed to break up the noble old frigate named *Constitution* and popularly known as *Old Ironsides:*

> Ay, tear her tattered ensign down!
> Long has it waved on high,
> And many an eye has danced to see
> That banner in the sky;
> Beneath it rung the battle shout
> And burst the cannon's roar—
> The meteor of the ocean air
> Shall sweep the clouds no more.
>
> Oh, better that her shattered hulk
> Should sink beneath the wave;
> Her thunders shook the mighty deep,
> And there should be her grave.
> Nail to the mast her holy flag,
> Set every threadbare sail,
> And give her to the god of storms,
> The lightning and the gale!

No, sir; in order to keep the Philippines it is not necessary to kill the women and children and to turn into a howling wilderness all the territory that the Army touches. Nor is it just or right to apply our tariff regulations to a country whose "welfare and happiness and rights" we are pretending to guarantee. Far more kind would it be of us and far better for them if we should enact into law the sentiments expressed in the quotations given above from the Boston speech of the trained legislator and the spotless Executive. The honor of this Government demands that we shall exercise over the islands such control as will best promote their future interest and welfare. Such control is not well illustrated by conflagrations, reconcentrado camps, and the water cure.

But, Mr. Speaker, in condemning these barbarities, I do not condemn our Army as a whole. These unutterable cruelties should be condemned as they should be avoided, but the whole Army should not share in that condemnation. We on this side of the Chamber have as deep and abiding interest in the Army and Navy as have our Republican brethren. It is as much our Army as it is theirs. From the first call to arms in the Spanish war up to this good hour the State which I have the honor in part to represent, and the whole section of country connected in feeling and sentiment with that State, have furnished their full share of soldiers, who have done their full share of fighting. Wherever the flag floats the sons of that section will fight on and ever undaunted in its defense. We on this side of the Chamber

stand ready to defend and uphold the Army, but at the same time we do not claim that the Army, like the king, can do no wrong; and we do not hesitate to denounce the wrong-doing of any soldier or Army officer. Nor do we hold in such righteous reverence any of our public officials that we can not fittingly characterize their misdoings. We honor our flag too much to see it prostituted to unworthy purposes; we would keep untarnished its stainless folds; we would send it forth as an emblem of civilization and of freedom; we would have it bring peace, good-will, and prosperity to the Philippines and to every foot of ground over which it floats. [Applause.]

Capacity of the Filipinos to Govern Themselves—9 Members of Aguinaldo's Cabinet and 28 Members of the Native or Malolos Congress Appointed by American Officials to High Place in the Philippines at Salaries Ranging from $7,500 on Down—6,253 Officers in the Philippines under Civil Service Paid Yearly $3,903,658, with 6,000,000 Christian Filipinos to Foot the Bill—Buencamino and Lopez—Effect of the Climate on the Health of White People in the Philippine Islands.

SPEECH

OF

HON. JOHN W. GAINES,

OF TENNESSEE.

IN THE HOUSE OF REPRESENTATIVES,

Monday, June 23, 1902.

The House being in Committee of the Whole on the state of the Union, and having under consideration the bill (S. 2295) temporarily to provide for the administration of the affairs of civil government in the Philippine Islands, and for other purposes—

Mr. GAINES of Tennessee said:

Mr. CHAIRMAN: Are people of the Philippine Islands capable of self-government? This is an important question to be decided, the Democrats contending that they are morally and mentally, the Republicans that they are not. Their capability for self-government is immaterial with the Republicans, for they do not propose now, or in the future, to give these people their independence. They are going to hold them outside the Constitution, tied to our Republic as by a string, making their country a dependency on the English style, the inhabitants colonists, as much so as our Revolutionary fathers were before they crushed colonialism and gained their independence—just as the Filipinos have been trying to do for many years.

The Democrats do not want to hold the Philippines permanently, nor the inhabitants as subjects. The Republicans do. The Democrats contend that the Filipinos are mentally and morally capable of self-government at this time, but that because of the ravages of war, disease, and death and all form of government which formerly existed there having been knocked down by American authority, the United States should set them up or aid them in setting up a government acceptable to them, just as was done with Cuba, reserving, if you please, if we so desire, certain coaling stations, etc., which I am satisfied the natives will cede to us without a murmur.

Undoubtedly the Filipinos believe that we promised the same consideration, attention, assistance, and rights which we proposed to give Cuba when we declared war against Spain. This I have heretofore alluded to in speeches already printed in the RECORD. Proof of this is bountiful, but I will content myself in alluding to and quoting in part the proclamation prepared and issued by Aguinaldo from Cavite, his headquarters, in sight of Admiral Dewey and his powerful guns. This instrument was thus promulgated, although Dewey could have summarily interrupted and prohibited this or any proclamation by Aguinaldo. Here are four paragraphs of this proclamation prepared July 1 and issued July 12, 1898, to wit:

1. The independence of the Philippines shall be proclaimed.
2. A republic shall be established, with a government designated by President Aguinaldo and approved by the admiral and general commanding the United States forces.
3. The government will recognize the temporary intervention of commissioners designated for the present by the United States.
4. The American protectorate shall be recognized on the same condition as arranged for Cuba.

Commodore John D. Ford, fleet engineer of the Pacific coast of the United States, in his book entitled An American Cruiser in the East, pages 491 and 500, publishes this at length.

Commodore Ford was on board the *Baltimore* at the battle of Manila Bay. There is no doubt this proclamation was issued at the time, place, manner, and in the form and words just quoted. It is printed in Senate Document No. 62, being forwarded by Admiral Dewey and others to the Department at Washington.

You may say what you please about Aguinaldo and what he did at this time and later. Certainly at this period his cooperation with our American officials in the Philippines is directly chargeable to Admiral Dewey and President McKinley and his Cabinet, who knew all about what was going on, what was being done by this leader. Although armed with full power to have prevented all this, Dewey permitted it certainly, and I believe directed it, because he says, in one of his telegrams to the President, through his Cabinet, in speaking of Aguinaldo and what he was doing, "I have advised."

But it is not my purpose to discuss this question—that is, of promised independence; that I have done, as shown by my speeches of March 13 and March 25, 1902, found in the CONGRESSIONAL RECORD of April 19, at pages 4636 and 4683, respectively.

I wish to confine my remarks to the question of the capabilities of the Filipinos for self-government. I will not cite all the leading Americans who were in Manila when and after Dewey was there; but it seems to me pertinent to refer to Commodore Ford, and Messrs. Sargent and Wilcox sent out by Dewey to investigate the capabilities and conditions of these people, and Gen. Charles King, who was in the Philippine campaign; ex-Minister John Barrett, who visited the Malolos congress while in session, and possibly others.

I will not read all they said, but will insert it as a part of my remarks.

It suffices to say on the question of government that all these gentlemen say they are capable of self-government; that many are able, educated, and refined, and in substance say what Commodore Ford literally says:

COMMODORE FORD'S OPINION.

"They have a good government now, which they are operating successfully, and preserve law and order," while Mr. Barrett says that on his visit in 1898 to this Malolos or native congress he was astonished to see that these congressmen—

Conducted themselves with great decorum, and showed a knowledge of debate and parliamentary law that would not compare unfavorably with the Japanese Parliament.

That the executive portion was made up of bright and able men.

Mr. Barrett, a rank expansionist, said:

The government which was organized by Aguinaldo at Cavite, and continued first at Bacoor and later at Malolos, developed into a much more elaborate affair than its most ardent supporters had originally expected. By the middle of October, 1898, he had assembled at Malolos a congress of 100 men who would compare in behavior, manner, dress, and education with the average men of the better classes of other Asiatic nations, possibly including the Japanese.

These men, whose sessions I repeatedly attended, conducted themselves with great decorum and showed a knowledge of debate and parliamentary law that would not compare unfavorably with the Japanese Parliament. The executive portion of the government was made up of a ministry of bright men, who seemed to understand their respective positions. Each general division was subdivided with reference to practical work. There was a large force of under secretaries and clerks, who appeared to be kept very busy with routine work.

Commodore Ford, in the Baltimore Sun, after his return from the Philippines, said:

The fellows we deal with out there are not ignorant savages, * * * but an intelligent, liberty-loving people, full of courage and determination. They have the intellect and stamina to govern themselves, and have done it for three hundred years, although under the rule of Spain. They were the bookkeepers, the assessors, and managed the entire machinery of government. * * * They have a good government now, which they are operating successfully, and preserve law and order.

Gen. Charles King, who had served a long time in the Philippine campaign, in a telegram to the Milwaukee Journal, said:

The capability of the Filipinos for self-government can not be doubted. Such men as Arellano, Aguinaldo, and many others whom I might name are highly educated. Nine-tenths of the people can read and write, and all are skilled artisans in one way or another. They are industrious, frugal, temperate, and, if given a fair start, could look out for themselves infinitely better than our people imagine. In my opinion, they rank far higher than the Cubans or the uneducated negroes, to whom we have given the right of suffrage. There is no culture, excepting among the higher classes, of course, but there is fair education everywhere, and many people have ability. The men in power whom I met are gentlemen, many of them scholars, educated abroad, polished in manners, perfect in courtesy, broad minded, and ripe in judgment. There is no reason in the world why the people should not have the self-government which they so passionately desire, so far as their individual ability to carry it on goes.

Admiral Dewey sent out two of his officers, Messrs. Wilcox and Sargent, to go through the country on a tour of investigation. They filed a valuable report, which Admiral Dewey said was the most reliable information, and which he forwarded to the authorities at Washington. They speak in the highest terms of the inhabitants, saying that—

On one point they seemed united, namely, that whatever our Government did for them, it had gained no right to annex them.

They summarized the situation in the following language:

I know of no other country where a stranger can travel hundreds of miles and be entertained by the very best the country produces, where it is offered freely and cheerfully and with apologies for not having something better, and not permitted to pay a cent in return. This, too, in a land devastated by a revolution that had begun nearly three years previously. It is an example of generosity and goodness of heart I have never met with before in my wanderings in various countries of the world, where it has been my keenest enjoyment to travel on untrodden paths far away from the busy turmoil and unceasing activity of a city's throng.

As I progressed farther into the unbeaten tracks we were surrounded by a greater part of the men, women, and children of the near-by population, always respectful, smiling, and with suave and gentle manners.

In spite of a dark exterior one can easily fathom a manifestation of like or dislike on the face of a Filipino man or woman, and I do not remember having ever seen in the expression of the dark-brown eyes of the female population other than the kindly suavity of their gentle natures.

It is amazing to see how well these natives can read and write when their

limited opportunities for learning are considered. Large numbers of them have at one time or other been attached to some official post, so that when their oppressors were overthrown they were prepared to supplant them in office, and in many instances they conducted the affairs of state with a greater degree of efficiency than was displayed by their Spanish predecessors.

THEY SET UP A GOVERNMENT OF THEIR OWN.

At this time the United States had not yet announced its policy with regard to the Philippines. The treaty of peace was being negotiated. In the meantime the native population, taking matters into their own hands, had declared their independence from all foreign jurisdiction and had set up a provisional government with Aguinaldo at its head.

THIS GOVERNMENT STOOD BETWEEN THEM AND ANARCHY.

It can not be denied that in a region occupied by many millions of inhabitants for nearly six months it stood alone between anarchy and order.

The Philippine officers, both military and civil, that we met in all the provinces, with very few exceptions, were men of intelligent appearance and conversation. The same is true of all those men who form the upper class in each town. They have great respect and admiration for learning, and many men of importance told me the first use the public revenues would be put to after the danger from war was over was to start good schools in every village. The poorer class are ignorant on most subjects, but a large percentage of them can read and write. In the provinces of eastern Luzon which we visited there appears to be no friction between the civil and military.

As to the question of independence at that time among the civil and military officers and the leading townspeople, the desire was universal. "On one point they seemed united, viz, that whatever our Government did for them it had gained no right to annex them."

Mr. Halstead, a leading Republican, says in his book entitled "The Story of the Philippines," that he went to the Philippines as "war correspondent in America and Europe, historian of the Philippine expedition, a friend of President McKinley," and that he went to prepare to publish a book "herewith presented, to offer in popular form the truth touching the Philippine Islands." He arrived in Manila early in the spring of 1898. At page 96 of his book he says:

Aguinaldo and his party have a congress. It might be an approved beginning of the territorial legislature, and the insurgent general might be the presiding officer. There would be abundant reason for the auspicious exercise of all his rights in the public service.

But this is not the only position discussed that Aguinaldo could fill by American appointment. In the summer of about two years or two and a half years ago, at Cedar Hill, Tenn., I picked up an Indiana paper, I think published at Madison, at all events some place in that State or Illinois. The name of the paper I forget and deeply regret that I have lost it, though I tried to preserve it and since to get a copy, but have failed, but in this paper was a letter from the Hon. Perry Heath, in which he expressed his regrets that he could not attend some entertainment in Indiana or Illinois given in his honor. He distinctly stated in his letter that President McKinley had offered to Aguinaldo a commission in the United States Army and he declined.

But this is not surprising, for he had been spoken of in the highest terms by our military officials in the Philippine Islands, by General Bell, as follows:

Aguinaldo—honest, sincere, and poor, not well educated, but a natural leader of men, with considerable shrewdness and ability. He has the power of creating among people confidence in himself and is undoubtedly a very popular man, highly respected by all; but there are better educated and richer natives who do not think he has sufficient education or experience to be a suitable president. He was a "little governor" of a small town in one of the provinces. It is also said that he was a school-teacher, but I have been unable to verify this assertion.

There are a number of Filipinos whom I have met, among them General Aguinaldo and a few of his leaders, whom I believe thoroughly trustworthy and fully capable of self-government, and the main reliance for small official positions and many larger ones would be upon people who know no standard of government other than that the Spaniards have furnished. * * * Aguinaldo has many adjutants, most of whom are young, smart, and well educated. * * * There is not a particle of doubt but what Aguinaldo and his leaders will resist any attempt of any government to reorganize a colonial government here. They are especially bitter toward the Spaniards, but equally determined not to submit any longer to being a colony of any other government.

Admiral Dewey informed the President that Aguinaldo's success had been remarkable, or to use his exact words, "has been wonderful." "Have advised frequently to conduct war humanely, which he has done invariably." This was cabled to the President June 27, 1898. General Bell's communication was August 29, 1898, as shown by Senate Document No. 62, where both these statements can be found.

MEMBERS OF AGUINALDO'S CABINETS AND OF THE MALOLOS CONGRESS APPOINTED TO HIGH AND LOW RESPONSIBLE PLACES BY GENERALS MERRITT, OTIS, M'ARTHUR, AND THE TAFT COMMISSION.

It is a remarkable fact that a large majority of the members of Aguinaldo's cabinet and between 28 and 31 members of the Malolos congress of the Philippine republic have been appointed to positions in the Philippine Islands by American authority, both military and civil, and these appointments have been approved by Presidents McKinley and Roosevelt; and this very bill now pending proposes to ratify these acts, these appointments, and all that the Taft Commission has done in the Philippine Islands, and of course this bill will pass this House.

From chief justice of the supreme court, from Philippine commissioner, from governorships, from trial judgeships, clear on down to the humblest clerkships in the Philippine Islands, native ex-insurgent Filipinos have been appointed thereto by Governor Taft and the Philippine Commission.

And it is a strange thing to me that this is the case, and at the same time the Republicans charge, without proving it, the Filipinos are incapable of self-government; that they are a lot, with a few exceptions, of "children," "savages," or "liars" to use the words of the gentleman from California [Mr. KAHN]; that they are traitors, treacherous, and base ingrates; and yet when General Merritt and General Otis were there they appointed ex-insurgents and their allies to judgeships, with a majority of the court natives—ex-insurgents—to do what? To administer the law; to say what the law is; to try cases and sweep away the property of natives and Americans alike; to indict natives and Americans alike and without grand jury; to try them with one man acting as court and jury combined without the intervention of any jury. And yet these people are incapable of self government. They are "children" with a few exceptions; they are imps of Satan, unworthy of independence or even the promise of independence.

You can not say we have an American governor at the head and therefore all will be right. You dare not do this, for if you do you convict the American governor of interfering with trials, interfering with the judgment of the court, which can not be done. There can be no outside intervention in trials. The opinion of our courts must be held within the breast of the court and be the opinion of that court until the opinion is delivered. A governor's province is executive and not judicial.

Let me go a step further. I can not dwell longer here. Let us get at the bald-faced official facts, going to show the capabilities of the Filipinos for self-government. Not all, of course, are capable; nor are all in the United States or elsewhere capable of self-government. We deny millions in this country the elective franchise, and do so by law, because unfit even to vote, much less make or execute the law.

MEMBERS OF AGUINALDO'S CABINET APPOINTED TO HIGH POSITIONS BY AMERICAN AUTHORITY.

I will now give briefly a list of some of the members of Aguinaldo's cabinet appointed to office by Generals Merritt, Otis, and MacArthur, and reappointed or continued in office by the Taft Commission or Governor Taft.

Arelano, who has been chief justice of the supreme court of Manila since the administration of General Merritt; salary, $7,500.

He was secretary of state says General Otis, and attorney-general says Vice-Consul Wildman, in Aguinaldo's cabinet, and helped to frame the Malolos government, helped to write the Malolos constitution, and for what? He thought that we were going to give the Filipinos their independence. If not, why did he thus act? He believed it. He construed everything we did here in the United States and that Dewey did in the Philippine Islands as saying that we were going to give them independence. He thought by his act these people were capable of self-government. If not, why did he thus act? And yet he is to be classed among many others who were thus impressed with the promise of independence by act or word as one of the "liars" alluded to by the gentleman from California [Mr. KAHN].

Again, there is Florentina Torres, a member of Aguinaldo's cabinet (secretary or subsecretary), who took sides with the insurgents and native government, but he was appointed attorney-general by General Merritt, who has been continued in office and is now associate justice with Arelano, at a salary of $7,000. He helped to write the Malolos constitution and to set up the Philippine republic.

But these are not all of Aguinaldo's cabinet thus honored.

There is Gregoria Areneta, solicitor-general of Manila; salary, $4,500.

There is Benito Legarda, a member of the Philippine Commission, salary $5,000 a year; then there is Tavera by his side, salary $5,000 a year.

There is Garcia Gonzago, governor of Cagayan Province, first appointed, then elected; salary, $1,800.

There is Ambrosio Flores, governor of Rezal Province; salary, $1,800.

Then there is Jose Coronel, a messenger in Manila in the department of police; salary, $120. These facts are official.

Then there is Mariano Trias, governor of Cavite Province, appointed by Governor Taft and subsequently elected; salary, $1,800.

And I want to say here that Colonel Baldwin told me—Colonel Baldwin is now fighting the Moros, and returned to the United States with our Congressional party, at least part of the way—that he preferred General Trias for governor to any American; that he was honest and intelligent and courageous and was making a fine governor. Yet Trias, he said, fought us as long as he could. Young Garcia, Colonel Baldwin's interpreter, said Trias and his men were nearly starved when he surrendered.

I have here a list of the members of the Malolos congress, heretofore published in the RECORD, and the names of Aguinaldo's cabinet officers; also an official publication from the Division of Insular Affairs, War Department, January 1, 1902, entitled

"Official Register of the Officers and Employees in the Civil Service of the Philippine Islands."

It contains 121 pages, and shows that there are 6,123 officers under the "civil service" in the Philippine Islands, by appointment or election, by the consent of Governor Taft, the Philippine Commission, President McKinley, or President Roosevelt.

6,000 OFFICERS UNDER CIVIL SERVICE IN PHILIPPINES—SALARIES PAID THEM NEARLY $4,000,000.

Think of it, over 6,000 officeholders appointed or elected in these islands before civil government has been set up in all the islands, costing in salaries alone $3,903,658.25 per year, if my additions are correct! We had but few inhabitants under the territory acquired under Democratic Administration—Louisiana—59,998 inhabitants, all told, in 1806, three years after we acquired it; a much smaller number in Florida, about 10,000, and 60,000 in the Mexican territory.

We needed only and appointed only a few judges, governors, and clerks. But here in the Philippines we have 10,000,000 people. The salaries range all the way from $20,000 per annum of Governor Taft down to about $100 to $150 a year, or nearly $4,000,000 per year for salaries alone.

By whom do these ex-insurgents sit? By the side of Taft and Commissioners Worcester and Wright and Ide and Moses. They, Legarda, Tavera, ex-insurgents, ex-members of Aguinaldo's cabinet, ex-members of the Malalos congress, the legislature of the Philippine republic that declared her independence; they thought and so acted in 1898 as to say these people were capable of self-government, of course, under strict suffrage laws we must presume; who thought independence had been promised, and this thought was so impressed upon them by the way Dewey acted and the way President McKinley permitted him to act, that they actually helped to erect the Philippine republic, and it was erected.

Yes, sir; so wise were they they thought this and believed this, or so ignorant were they that they thought this and believed this, they—Legarda, Tavera, Coronel, Arelano, Buencamino, Areneta, Torres, Flores, Trias, members of Aguinaldo's cabinet.

And yet Governor Taft and his associates go right over there and find that they are fit—for what? To say what the law is, and therefore judicial material, and they are made judges; that they are so fit to make laws that they are put on the Philippine Commission and proceed to making laws at high salaries; they are made governors, so fit are they to execute the law and respect their oaths.

Why, my dear sirs, if General Merritt had not shot the Malolos congress to pieces just before the Schurman Commissioners got to Manila in 1899, if General Merritt had not then shot down the Philippine republic, these bodies would have gone to pieces and gone down by thus taking the officers from this Philippine republic and putting them in these high positions.

I was informed by members of the civil service commission, October, 1901, while in Manila, that about 5,000 Filipinos, or natives, were filling positions under the civil government. We are recently informed that there are over 4,000 natives in office under the "civil service," and of course they must be unable to read and write, they must be liars, and thieves, and traitors, and murderers, and treacherous before they can stand this civil-service examination—before they are eligible!

Let us see who Mr. Commissioner Tavera was before and since the advent of American authority in the Philippines.

To the Schurman Commission he said he was a member of cabinet of the governor-general of the Philippine Islands under Spain, and took part in trying to keep down the uprising of the insurgents against Spain. Next we hear of him on the other side, with the insurgents and the United States, and against Spain, and a member, he says, of Aguinaldo's cabinet. He was a member of the Malolos congress. He helped to write the constitution of the Philippine republic, with Calderon, the Rosarios, Arelano, Gonzales, Barito, and Ocampo, all of whom, except Ocampo, hold positions under the present civil government by appointment of Governor Taft or his associates.

The next we hear of Tavera he takes sides with the Americans against the Filipinos, and then later we find him registered as one of the Philippine Commissioners, sitting hard by the side of Taft and Wright and Worcester and Moses—Bernard Moses.

He, too, showed that he believed that by word and act independence had been promised, and that self-government was what the natives wanted, and that they could execute it, so he, too, proceeded to build a Philippine republic, and he now draws an annual salary of $5,000 a year since September 1, 1901.

Mr. BARTLETT. Is that in silver?

Mr. GAINES of Tennessee. No, sir; it is in American gold. Truly it can be said of Tavera that—

He wired in and he wired out,
He left everybody still in doubt,
Whether the snake that made the track
Was going north (where) or coming back.

Doubtless he did this as many others to avoid personal danger. He is a scholarly man, a leader of great reputation at home and abroad.

But I must hurry on. Let me get now to the members of the Malolos congress who have been appointed or elected, and now hold, according to this Official Register, position in the Philippine Islands. Here is the list I have prepared:

Name.	Date appointed.	Salary.	Office held.
A. Bautista	Mar. 14, 1900	$3,000	Commissioner of police.
A. C. Herera	Aug. 7, 1901	4,500	Mayor of Manila.
B. Legarda	Sept. 1, 1901	5,000	United States Philippine Commissioner.
F. Buencamino	July 1, 1901	3,500	Civil service commissioner.
Ignacio Villamor	June 15, 1901	4,000	Judge court of first instance.
Isidoro Parades	----do----	3,000	Do.
J. Gonzales	June 1, 1901	150	Provincial service.
José Salamanca	Oct. 28, 1901	300	Delegate.
José R. Santiago	Jan. 1, 1902	----------	Justice of the peace.
José Coronel	Nov. 18, 1901	120	Messenger police service.
José Alejandrino	Aug. 7, 1901	1,800	Assistant city engineer.
José Fernandez	June 22, 1900	360	Philippine Islands civil service commissioner.
Juan Manday	Aug. 28, 1901	1,100	Fiscal, Manila.
Lorenzo Rosario	July 17, 1901	240	Clerk, Manila.
M. X. Burgos	Dec. 1, 1901	1,400	Clerk bureau of statistics, Manila.
M. Martinez	Feb. 15, 1901	360	Clerk industrial bureau.
El Del Rosario	July 17, 1901	240	Clerk supreme court.
Mariano Abello	Aug. 20, 1901	180	Clerk.
Mariana Crisistoma	Feb. 22, 1901	1,300	Fiscal.
Martin Garcia	Jan. 2, 1900	240	Weigher.
Mena Crisaloga	Aug. 16, 1901	1,800	Governor Province Ilocos Sur.
Patricio Baylon	Apr. 3, 1901	1,250	Fiscal.
Ricardo Paras	May 1, 1901	1,000	Governor Province Marinduque.
Marcelo Del Rosario	June 1, 1902	----------	Justice of the peace.
S. V. Rosario	Oct. 1, 1898	750	Municipal doctor.
Sophio Alanday	Mar. 13, 1901	1,300	Fiscal.
Satero Laurel	Jan. 1, 1902	----------	Justice of the peace.
T. H. Pardo Tavera	Sept. 1, 1901	5,000	United States Philippine Commissioner.
Filipe Calderon	----do----	----------	Law examiner.

Vicente Somosa was medical adviser in Malate.

Twenty-four members of the Gonzales are in Government employ.

I insert here under the rule an important letter from Sixto Lopez, received since my speech was delivered, showing the officers of Aguinaldo's cabinet, and members of the Malolos congress—Lopez being one of the latter—now in the employ of the American Government in the Philippine Islands:

CARE OF FISKE WARREN, ESQ., 8 MOUNT VERNON PLACE,
Boston, Mass., June 21, 1902.

Hon. J. W. GAINES,
House of Representatives, United States, Washington, D. C.

DEAR SIR: I have to thank you for your letter of yesterday, with inclosure, to which I now beg to reply:

First, as to the history of Señor Buencamino. I have in my possession a statement published by the Filipinos resident in Paris in 1889, in which many serious charges are made against Buencamino and his family. But as I am concerned with his public career only and such of his private acts as affect that career, I will not even hand on what others have written about his private life. These few extracts, however, I will give, not on my own authority, but on that of the Filipinos of Paris, from a written statement supplied them by the Filipinos in Manila:

"Felipe Buencamino * * * a lay servant of the friars * * * is a native of San Miguel de Mayumo, in the province of Bulacan, a Chinese mestizo, and the son of Victor and Petrona Siojo. He passed a miserable and hungry childhood until (private accusation). Time passed, and through the influence of the Very Rev. Father Friar Juan Tombo Felipe Buencamino was admitted into the college of Santo Tomas of the Dominican friars as a domestic, and there he remained until the year 1869, in which he took his departure. In a few months anonymous writings began to appear in the neighborhood of the university and in public buildings directed against the friars and the national government.

Felipe Buencamino, the author of these anonymous writings, was put in the public stocks of Bilibid prison. In the court of first instance of the district of Intramuros, in Manila, there remains * * * the record of a criminal suit, which reads: "Suit No. 3371, against Felipe Buencamino, accused of conspiring against the public order by distributing anonymous writings against the friars and the national government." I do not regard this as in any sense to his discredit, except that the writings ought not to have been anonymous. But he afterwards praised and defended the friars, General Weyler, Spain, and the Spanish Government in the Philippines in the most extravagant terms, and the above-mentioned suit was dropped.

"Time passed," continues the statement, "and he married Juanita, a daughter of Capt. Joaquin de Sulipan, and squandered the dowry of this woman in [private accusation]. Poor Juanita died, and he married Guadalupe, the daughter of Ninay Salazer de Abreu. He also squandered in a short time the dowry that poor Guadalupe brought him, and [serious private accusation]. And as he desired to squander all the property of Guadalupe's parents, by use of intrigue and anonymous writings, he labored to have General Terrero (governor-general) deport his mother-in-law, Ninay. But although he brought about the deportation of his mother-in-law, he did not succeed in getting hold of the money." This is a unique method of getting rid of one's mother-in-law, and I hereby pass it on from Señor Buencamino to all whom it may concern!

"As a lawyer," continues the unsparing statement, "his process was to make up suits and criminal quarrels against wealthy persons, threatening to serve writs upon them; and when they had been terrified in this manner, he would arrange to compromise the matter for large sums of money. * * * In the sham revolt brought about by the friars in Pangasinan, in the time of General Jovellar, he was the agent of their reverences, and prepared and arranged these tumults, in which there were submitted to inquisitorial tortures many wealthy persons, lawyers and physicians of the country—among

them the father and brother of the eminent painter Luna. When he was provisional promotor fiscal of Binondo he sold his judgments at a good price, and when he was provisional judge of first instance at Tayabas he sold judgments to the highest bidder. * * * All that has been stated, and many other things which will be told in due season, are already well known and are public property in the Philippines."

It is remarkable and significant that thirteen years ago the following was written of this man who is now posing as a representative of the Philippine people: "Behold the man! * * * This is the opera-bouffe hero who now thrusts himself forth as the redeemer of his country, and to whom the Philippine authorities have given authority to publish the above violent document (in praise and defense of Spain, the friars, and Weyler), giving it their approval. Are the government of the Philippine Islands and the cause of the friars so utterly abandoned and without prestige that they can find no other defender than a man of Felipe Buencamino's character? Their cause must surely have fallen away most lamentably, and their intrigues must have been very unsuccessful when they can no longer find a man of ability and power who could revive the dark counsels * * * of an already moribund tyranny." This language of the Paris Filipinos is most appropriate to Señor Buencamino in his present attitude and in the present circumstances.

For further particulars about Señor Buencamino I beg to refer you to the inclosed short article and to the Hon. WILLIAM A. JONES, who will, perhaps, show you a letter which I recently sent to him giving full details of Buencamino's changes of political and religious opinion.

MEMBERS MALOLOS CONGRESS IN THE EMPLOY OF THE GOVERNMENT IN THE PHILIPPINE ISLANDS BY AMERICAN APPOINTMENT.

As to the part that the Filipinos are taking in the present government of the Philippines, let me first restate, with a few additions, what I wrote you on the 18th in reference to the Malolos congress.

Of the 91 members of the congress mentioned by you on page 6954 of the CONGRESSIONAL RECORD, the following 28 hold office under the American Government in the Philippine Islands:

Arsenio Cruz Herrera, municipal board or government of Manila.
Benito Legarda, member civil committee.
Felipe Buencamino, member civil-service board.
Felipe Calderon, legal examiner.
Gregorio Aguilera, mayor of Lipa.
Ignacio Villamor, circuit judge sixth district.
Mena Crisologo, governor South Ilocos (appointed and elected).
Pablo Texon Roqur, governor Bulacan (elected).
Ricardo Paras, governor Marinduque (elected).
Santiago Icasiano, medical officer, Tarlac Province.
Sebastian de Castro, medical officer, Romblon.
Jose M. Lerma, governor, Bataan (elected).
Jose Alejandrino, second assistant city engineer, Manila.
Manuel Zerez Burgos, clerk, executive bureau and of statistics.
Salvidor V. del Rosario, medical officer, Manila.
Mariano V. del Rosario, bureau government laboratories.
Trinidad Pardo de Tavera, member Civil Commission.
Juan Manday, fiscal, Zambales Province.
Sophio Alandy, fiscal, Tayabas Province.
Patricio Baylon, fiscal, Sorsogon Province.
Mariano Crisostomo, fiscal, Bulacan Province.
Marcial Calleja, fiscal, Albay Province.
Sotero Laurel, justice of peace, Tanawan, Batangas Province.
Isidor Paredes, circuit judge, second district.
Jose Salamanca, delegate, Cavite Province.
Jose Oliveros, clerk of court, fourth district.
Manuel Gomez, secretary board of health, Manila.
Jose R. Santiago, justice of peace in Santa Rita, Pampanga.

The three following were appointed by General Otis, and formerly held office, but their names do not appear on the civil-service list:

Ambrosio R. Bautista, judge, Pangasinan.
Hipolita Magsalin, judge, Manila.
Jose Basa, judge, Cavite.

The following were members of Aguinaldo's cabinet (secretaries and subsecretaries), but are not mentioned in your list:

Cayetano Arellano, chief justice supreme court.
Gregorio Araneta, solicitor-general, Manila.
Florentino Torres, judge supreme court.
Garcio Gonzaga, governor Cagayan Province (appointed and elected).
Ambrosio Florres, governor Rizal Province.
Mariano Trias, governor of Cavite (appointed and elected).

Almost all of the members of the Malolos congress were men of distinction—lawyers, doctors, merchants, etc.—and most of them had a university education. Many of them have been offered and have refused office under the present government. The following, to my personal knowledge, are among this latter class, and are now members of the Peace Association: Alberto Barretto, Pedro A. Paterno, Leon Guerrero, Dr. Jose Luna, Joaquin Luna (both brothers of the general), Justo Lucban (brother of the general), and Aguedo Velarde.

The above and others which I shall presently mention are the "ladrones" and "bandits" of General Otis, who did more harm by his misrepresentations and his failure to grasp the real situation than probably any other man. How one's character does improve when one agrees with the powers that be!

It should be remembered that the present local government, especially in the provinces, is in form and personnel practically the same as that under the Malolos government, which in turn was much the same in form and personnel as that under the Spanish régime, except that it was much more democratic. And it is well known, but not generally realized, that under Spanish rule not only were the functions of government carried on by the Filipinos themselves, but the form of goverment was modeled upon and was very similar to that in existence prior to the Spanish occupation.

The Cabeza de Barangay, a very important element in the government being the voting unit of the people, was of pre-Spanish origin. The word "Barangay" is a corruption of the Tagal word "Balangay," which is the name for a section of the people and its civic representative. This word is still used in the churches in proclaiming the banns of marriage. The Balangay occupied not only a civic, but a paternal relation to the hundred men or families which he represented, and each family had the right to change at will from one Balangay to another. Their retention of their own language, and of this and other essential forms of government, show that the Filipinos are not the characterless nonentities which many nonobservant persons represent them to be.

It should likewise be remembered that, with the exception of a few men like Chief Justice Arellano, the best class of Filipinos—that is to say, those of ability and national reputation—are holding aloof from the present government. The present employees are made up chiefly of the smaller men who held provincial and municipal positions under both the Spanish and the Malolos government. Nevertheless, I believe it would be impossible for America to carry on even the present unsatisfactory government without the assistance of these smaller officials, who understand the people in a way in which no foreigner could understand them. These smaller officials are, for the sake of present peace, giving their services for a remuneration which is ridiculous when compared with that given to American officials, who, in many cases, hinder instead of help matters by the contempt with which they treat the Filipinos.

It would be impossible for me to here give a complete list of the hundreds—I might almost say thousands—of Filipinos now employed in the lower grades of the service, but the following are a few, as memory serves me, important men connected with the war who have accepted office under the present régime:

Martin T. Delgado, military commander Filipino army in Panay, now governor of Iloilo (appointed and elected).
Arsenio Climaco, governor politico-militar in Cebu, now governor Cebu Province (elected).
Daniel Tirona, general, Filipino army, now provincial secretary Cavite.
Julio Llorente, governor of Cebu, now governor of Cebu.
S. Jugo Vidal, governor (?) of Capiz Province, now governor of Caliz Province.
Florencia R. Caedo, secretary provincial government of Batangas, now the same.
Francisco Sans, major (?), Filipino army, now governor of Romblon.
Juan Villamor, lieutenant-colonel, Filipino army, now governor of Abra Province.
Felix M. Roxas, secretary Paris Filipino junta, now circuit judge fifth district.
Modesto Reyes, member Madrid junta, now assistant city attorney, Manila.
Edwardo Nepumuceno, provincial secretary Marinduque, now the same.
Ludovico Arejola, general, Filipino army, now clerk of court eighth district.
Pedro Pastor, assistant provincial secretary Batangas, now clerk of court seventh district.
Manuel Arguelles, governor of Tayabas, now translator United States Philippine Commission.
Antonio Constantino, assistant secretary (?) Bulacan, now assistant attorney-general.
Gregorio Nieva, captain, Filipino army, now interpreter bureau of health.
Leon Novenario, major, Filipino army, now clerk audit bureau.
Januario Bautista, subsecretary (?) Malolos congress, now fourth-class inspector bureau of customs.
E. P. Escalante, clerk, Filipino government, Iloilo, now clerk customs bureau.
Jose Ner, member Hongkong junta, now second assistant prosecuting attorney, Manila (recently reported dead).
Manuel Irarte, provisional appointment, Filipino government, now chief of bureau of archives.
Baldomero Roxas, medical officer, Filipino army, now medical officer Manila police.
Julio Ruiz, medical officer, Filipino army, now medical provisional officer, Sorsogon.
Gavino Vinluan, medical officer, Filipino army, now medical officer, Masbate Province.
Remigio San Agustin, medical officer, Filipino army, now medical officer, Misamis Province.

There were also several Filipino journalists, who, though not in the service, supported and defended the Filipino government, and who now hold office, such as—

José Abreu, now in the office of the Secretary of War, Washington; Manuel V. del Rosario, now assistant clerk of court, sixth district; José V. del Rosario, now chief sanitary inspector, bureau of health; Fidel Reyes, now hospital steward, bureau of prisons, etc.

It is fair to say that, excluding the lowest class of officers, such as messengers and policemen and juniors, who have taken office for the first time, probably 75 per cent of those in the employ of the present government were also in the employ of the Malolos government; and the same may be said of the present 1,219 justices of the peace. Certainly this is true of my own province, Batangas.

Another point worthy of note is this: It may be thought that important provincial offices are held chiefly by Filipinos from Manila, where educational opportunities are better, but this is not so. In all the provinces the important offices are held by natives of the province. This is confirmed by reference to the Official Register of the service. It is true also that those holding office in the central government at Manila are representative of all the seven provincial peoples, and are therefore not exclusively Tagals.

In the hope that this information will be of some service to you, and that you will call upon me at any future time for further information that may be in my possession,

Sincerely, yours, SIXTO LOPEZ.

Felipe Calderon helped to write the constitution of the Philippine republic. He was a member of the Malolos congress. His name does not appear in this official list, but it does appear in the Philippine Laws, 1901, page 744, as a "member of the advisory board of Ermita," while Sixto Lopez writes me that he is now "legal examiner," in the employ of the civil government.

The gentleman from California [Mr. KAHN] in his speech the other day said he was an officer under the civil government, and quoted him in support of the imperial, colonial position the gentleman from California upholds. And I may add that the four or five Filipino persons alluded to by that gentleman in support of his position were members of Aguinaldo's cabinet or the Malolos cabinet, or both, with one, or possibly two, exceptions, and they were allies, and yet the gentleman from California alludes to them as gentlemen of ability and honor, respectability, who want this Republic to hold them as subjects, these islands as a colony, when these men helped to build up independence in 1898 by erecting a Malolos constitution and setting up a Philippine republic!

Again, there is Dr. Jose Albert, a member of the Malolos congress, a surgeon in the Philippine army, now president of the Federal party. He is a talented physician, one of the most scholarly men I ever met, with whom I had an interview, heretofore published in the RECORD, February, 1902, pages 2038 and 2039, in which he in substance stated the Federal party wanted—expected—immediate statehood, that is, the admission of the Philippines as a State of this Union—if not, then independence, and that the Filipinos would not stand to be held as colonists.

PHILIPPINE ISLAND COMMISSION RESPONSIBLE FOR FEDERAL PARTY.

And I stop here for a moment to state that General MacArthur's report shows and appendix states that this Federal party framed their articles of incorporation, and then as a body those in charge went before the Philippine Commission as a commission and had a regular meeting, when there and then the plan of this Federal party was submitted to this Commission, and the Commission approved it with some slight alterations.

This Commission is responsible for this Federal party, and that party demands statehood, American citizenship, the American Constitution and Declaration of Independence as laws of these islands, and representation in the United States Congress from the Philippine Islands.

But my time is going short. I desire now to allude briefly to Buencamino. He was sent for and brought here by order of the President, through the War Department. I am glad he came. I wish more of the Filipinos—the leaders in the islands to which I have heretofore alluded and some others—had been brought here. You would then have a practical refutation of the charges that the Filipinos really have no brains, are uneducated, can not read and write, know nothing about law and order, are savages, a clout-wearing people, a lot of "children."

I desire to place in my remarks a part of an interview published heretofore in the RECORD, June 10, 1902, at page 6965, which I had with Buencamino, October, 1901, in Manila. It was taken stenographically by the official stenographer of the Philippine Commission, the original of which, properly certified, was handed the Public Printer and published in the RECORD, and is therefore correct. Here are the pertinent questions asked Buencamino by me, and the answers, viz:

Q. Did you ever read the speeches of Senator HOAR?
A. He is better fitted, and has divined the conditions in the Philippines better than any other man.
Q. His speeches better define the conditions, possibilities, etc., of the Philippines than any other speeches?
A. The best of all.
Q. You are willing and your people are willing to stand by Senator HOAR and what Senator HOAR wants, and that is what you want and your people want, and nothing else will satisfy you?
A. Yes.
Q. Did you ever read the speech of Mr. LITTLEFIELD of Maine?
A. I did not read it, but have heard of it.
Q. What did you hear about LITTLEFIELD'S speech?
A. I do not remember very well, but think I have been told that Mr. LITTLEFIELD expressed the opinion that the Constitution follows the flag.
Q. You believe that, and it is what the Filipino people want?
A. They do not only want that, but they understand it to be a fact.
Q. Have you ever read the Declaration of Independence?
A. Yes, I have read it thirty times.
Q. What do you think of it? Pick out some portion you would like to read to me showing your sentiments.
A. After reading it thirty times it is all sacred to me.
Q. What do you think of this? "We hold these truths to be self-evident, that all men are created equal; that they are endowed by their Creator with certain unalienable rights; that among these are life, liberty, and the pursuit of happiness."
A. That accords with the sentiments of my heart.
Q. Now, then, you believe in the Declaration of Independence and the Constitution of the United States, and your people want the full benefit of those instruments?
A. Yes.
Q. And nothing else short of that will satisfy your people?
A. Yes.

PRESIDENT ROOSEVELT AND SECRETARY ROOT'S OWN WITNESS, BROUGHT TO UNITED STATES BY ORDER OF THE WAR DEPARTMENT.

Felipe Buencamino (brought to America by order of the War Department, printed in the Manila Times a few days ago), in a letter dated Tarlac, P. I., August 20, 1899, addressed to the Congress of the United States, found in Congressional Record, January 9, 1900, vol. 33, part 1, Fifty-sixth Congress, first session, pages 724, 725, 726, among many things, says that Admiral Dewey brought Aguinaldo to Cavite, allowed him to establish a government at Cavite—

which commenced to exercise the functions of government on the 24th of May, 1898, issuing therefrom a proclamation declaring war against Spain to wrest from her, our independence.

WHO IS IT THAT CAUSED TWO FRIENDS AND BRETHREN TO WAGE WAR UPON ONE ANOTHER? PRESIDENT WILLIAM M'KINLEY.

He states the relation of the Filipinos and their friendly feelings with Americans down to the unlawful and heartless interruption of President McKinley.

He says:

Who is it that has caused these two friends and brethren to wage war upon one another? Alas! esteemed citizens of the great American Republic, you know well who is the cause of such reckless perturbation. It is the President of your Republic, Mr. William McKinley, who, using as a pretext alleged rights obtained through the purchase of more than doubtful sovereignty of Spain, gives evidence of his intentions to ignore the bonds of friendship which should unite the two nations by imposing on us by force of arms the sovereignty of the United States.

Is this line of conduct of Mr. McKinley in harmony with the canons of morality simply because the American nation is greater, more opulent, and more powerful than the Filipinos?

Surely it is not, for if moral obligations, which bind parties to respect the generally accepted codes of morality, are applicable to international affairs, it is beyond question that there should be no evasion of obligation on the part of the great American nation to stand by and protect the small Filipino nation until the great work of securing the resignation of our existence as an independent nation is recognized and thereby firmly established—a great work to which your consul (above mentioned) and commanders unquestionably and unprovidentially applied themselves.

In the name of Almighty God, of humanity, and of national honor, I now appeal to the great and influential citizens of the United States to fulfill these obligations by passing, as a matter of paramount importance, a just resolution in your national Congress officially recognizing our independence, thereby bringing to an end this inhuman and wicked war and restoring the reign of peace and harmony between Americans and Filipinos, who in accordance with the infallible will of God, should live under the happy conditions of brotherhood.

I will here insert what Mr. Carnegie said on McKinley's war:

PRESIDENT M'KINLEY'S WAR, SAYS A REPUBLICAN, MR. CARNEGIE.

Editor of the New York World.

SIR: The President, in his Boston speech yesterday, makes this extraordinary statement: "The Philippines, like Cuba and Porto Rico, were intrusted to our hands by the war."

On the contrary, the protocol signed as the result of the war provided for the Philippines, not "like Cuba and Porto Rico," but expressly reserved them for negotiation with Spain as to their "future control, disposition, and government."

The Philippines have been "intrusted to us" solely by the unexpected demand for them made by the President himself after he had suddenly changed his mind—which was at first that we should not burden ourselves with them.

The Senate asked him to lay before it his instructions or correspondence with the Commissioners, which would have proved this, but he refused.

The Philippine burden is not chargeable to the war. This is the President's own Pandora box, his New Year's gift to his country, for which he alone is responsible. Neither Congress nor the people had any voice in the matter. But one need not wonder why he should attempt to evade the responsibility, since he tells us that "every red drop, whether from the veins of an American soldier or a misguided Filipino, is anguish to my heart." His conscience smites him. No wonder. The guilty Macbeth also cried out, "Thou canst not say I did it."

Whether the acquisition of the Philippines was wise or foolish, they are upon our hands, not by the war, but by the President's own act, and he had better stand up like a man and assume the responsibility, asking his countrymen to forgive his mistake if he now sees he has made one.

ANDREW CARNEGIE.

New York, February 17.

Buencamino's letter continues:

THE WAY THE FIGHT AT SAN JUAN BRIDGE BEGUN, FEBRUARY 4, 1899.

The writer, Buencamino, in great detail leads up to this event. He says:

Therefore it is plain that it can not be claimed that by reason of your victories over the Spaniards, rights of conquest accrue to you as being due from the Filipinos, for the all-sufficient reason that you were not engaged in war with us between the 1st of May, 1898, and the 4th of February, 1899, during the night of which latter date your forces, in accordance with the orders of President William McKinley, commenced hostilities against our forces for the purpose of establishing American sovereignty in our archipelago by force of arms.

SAYS TREATY OF CESSION VOID—REASONS.

On the other hand, in respect of cessions, the essential conditions include the possession of what is ceded, and when it concerns inhabited territories the concordance and express consent of the inhabitants is necessary.

Neither of these conditions have been fulfilled in respect of the cession of the Philippines by the treaty of Paris of the 10th of December, 1898.

First. Because at that date, and long before it, Spain exercised no sovereignty whatever over any Philippine territory, which was recognized by us and governed by us since June, 1898, which facts were well known by the Governments of Washington and Madrid.

Second. Because the Filipino people had publicly and loyally manifested to the Government at Washington and to the whole world that it was their desire to live independently of all alien sovereignty; and on this account, perhaps, our wishes were not consulted when the cession was made, an act without doubt of bad faith on the part of the two contracting parties, who were per force obliged to make the terms void by reason of this false step.

Consequently—

He said—

this treaty is void as to the islands and their inhabitants, nor are the United States in any way entitled to impose by it (treaty) upon the Filipino people an alien sovereignty by force of arms.

The United States, therefore, can not be excused from recognizing our independence, either on account of their victories over the Spaniards or by reason of the provisions of the treaty of Paris.

We, however, readily admit that our gratitude and full recognition are due to the great North American Nation for the generous assistance proffered us by their consular representatives and commanders in bringing from Hongkong to Cavite our illustrious leader to continue the rebellion against Spain, and then, by respecting that revolution, recognizing it as a sovereign power which replaced that which Spain had lost; but from the fact of oppressing us, and endeavoring to filch from us our liberities, and subjecting our independence, so dearly won, to the influence of a new foreign yoke, there is a wide gulf fixed, which is as limitless as the distance to another world, and the only possible way to accomplish your object is to destroy the lives of 8,000,000 Filipinos—an act which would leave on the hitherto spotless pages of your glorious history and traditional liberality, an everlasting and indelible stain.

Buencamino then speaks of the social status of the inhabitants, and then says:

These are the reasons why we appeal for official recognition of our independence—reason, which we confidently submit to the deep conscientiousness of the people of the United States—a people destined by God to decide the fate of our unfortunate country; a fate which would be better if, heeding the dictates of justice and humanity, your President, Mr. McKinley, had not chosen to wage this cruel, devastating war against us, through your powerful land and sea forces.

SAYS FILIPINOS NOT TO BLAME FOR OUTBREAK.

It is sometimes said that we are to blame for the outbreak of hostilities during the night of the 4th of February last, but this is not an established fact.

In the first place because we, the Filipinos, were expecting at that very time (the beginning of February) official recognition of our independence from the Government at Washington, an expectation which was justified by the annexed letter of Gen. E. S. Otis, dated 25th of January; also on account of what took place at the conferences of the mixed commissions of Ameri-

cans and Filipinos which sat in Manila during the latter part of the said month of January to discuss matters and arrange for a basis of friendly relations between the two parties, which, it was hoped, would be permanent. Moreover, there was another reason, namely, the Filipinos were fully aware of the superior strength of your forces, against whom it would have been criminal folly to pit our inexperienced and undisciplined army.

Accordingly, it is unquestionable that we were not the aggressors, for we knew full well that were we to act on the offensive we could look for neither military nor political gain of any kind. On the contrary, we regarded such action as bordering on suicidal folly and well nigh sure to bring down on us the hatred and contempt of the American people. We had, in fact, nothing to gain and very much to lose by aggression.

Esteemed citizens of the United States, if with the foregoing reasoning there be borne in mind the fact that we were living in peace and harmony with your forces since June, without the smallest intention or inclination to commence hostilities, at a period when your forces were smaller and therefore more easy to cope with than subsequently, I verily believe that the enlightened people of the United States will not be slow to realize that it is not in the least degree probable, nor is it reasonable to assume that we were the aggressors, seeing that we stood in need of their good will and were anxious to court and maintain a favorable impression with the American electorate in the interest of our cause. Peace and good will were essential to the success of our cause—a cause which would at once be jeopardized by any overt act of aggression.

We are neither celebrated warriors nor great fighters; nor are we as quixotic as the Spaniards. We took up arms to obtain our independence, and it is self-evident that we did not develop our little armed force for the purpose of making an enemy of such a great and mighty people as the citizens of the United States in order that thereby our noble cause might the more easily triumph.

If we call to mind the fact that your President, Mr. McKinley, caused reenforcements to be sent to Manila after the capitulation by Spain, on the 30th of August, 1898; if we remember his refusal to listen to our humble petition to him, praying for recognition of our independence through our representative, Don Felipe Agoncillo, whom he refused to receive, or whether we recall the fact that he refused to give ear unto our appeal through the good offices of General Otis, as is proved by a letter from the General and the (omission in copy) to; and if we take into consideration that, lastly and finally the treaty of Paris was so framed as to involve the cession of the sovereignty of Spain to the United States. I am of the opinion that the most natural sequence of these incontestable moves of Mr. McKinley is to be found in the outbreak of hostilities, namely, an order from your President to General Otis to commence with acts of aggression and impose on us that odious sovereignty by force of arms, notwithstanding the fact that we had demonstrated and made it evident in every possible way from the first that we would accept no solution other than our independence.

You, honorable representatives of the people of the United States, having in view the providential bonds which bind the fate of the Philippines to your supreme decision, surely you will not be unmindful at such a momentous epoch of the sublime principles of right and justice proclaimed by the illustrious founders of your independence on the 4th July, 1776. Endowed with those magnificent principles your nation advanced rapidly along the path of progress till it became great and powerful, admired and respected by all the aged states of Europe.

Trusting, therefore, in your glorious traditions of humanity and liberality, the Filipinos look forward with confidence to obtaining from your acknowledged rectitude a just resolution officially recognizing the independence of our beloved country.

I have the honor to be, gentlemen, yours, very respectfully,

FELIPE BUENCAMINO.

TARLAC, P. I., *August 20, 1899.*

Possibly Buencamino had read some of President McKinley's utterances. For example, at Shawneetown, Congressman McKinley, a few years ago, said:

Human rights and constitutional privileges must not be forgotten in our race for wealth, for commercial supremacy. The government of the people must be by the people and not by a few of the people. It must be done by consent of the governed and of all the governed. Power, it must not be forgotten, which is secured by wrong or usurpation, is soon dethroned. We have no right in law or morals to usurp that which belongs to another, whether it be property or power.

October, 1898 (after the protocol of August 12 and before the proposed treaty was signed in Paris, December 10, 1898), the President, at Chicago, said:

The war with Spain was undertaken, not that the United States should increase its territory, but that the oppression at our door should be stopped. This noble sentiment must continue to animate us, and we must give to the world a full demonstration of the sincerity of our purpose.

In Atlanta, October 16, 1898, the President said, having changed front:

The flag has been planted in two hemispheres, and there it remains, the symbol of liberty and law, of peace and progress. Who will withdraw from the people over whom it floats its protecting folds? Will the people of the South help to haul it down?

At Boston, February 17, 1899, the President said:

No imperial designs lurk in the American mind. They are alien to American sentiment, thought, and purpose. Our priceless principles undergo no change under a tropical sun.

The President continues:

Our concern was not for territory or trade or empire, but for the people whose interest and destiny, without willing it, had been put into our hand. It was with this feeling that from the first day to the last not one word or line went from the executives in Washington to our military and naval commanders in Manila, or to our peace commissioners in Paris, that did not put as the sole purpose to be kept in mind, first after the success of our arms and the maintenance of our own honor, the welfare and happiness and the rights of the inhabitants of the Philippine Islands.

Noble utterances: but why were the Cubans accorded high place and independence in the protocol written by the President, and the Filipinos brutally ignored from the first day to the last day?

Mr. Chairman, the population of the Philippine Islands in 1890, as estimated by a pamphlet called "Filipinas Fundamental Problem," by a Spaniard. D. Luis Aguiado, published in Madrid in 1891 (violently attacking Rizal), was 8,000,000, as follows:

Christian natives	5,869,000
Chinese mestizos	500,000
Chinese	125,000
Foreign mestizos	7,000
Foreigners or white races	2,000
Spanish mestizos	75,000
Spaniards born in the islands	8,000
Peninsular Spaniards, including the garrisons, friars, officials, and private persons	14,000
Moros of Mindanao, Jolo, Tawi Tawi, Basilan, Balabac, and other islands	600,000
Heathen in all the archipelago—Igorrotes, Manobos, Subanas, Monteses, Ibilaos, Aetas, Ifugaos, etc	800,000
Total	8,000,000

(Frederick H. Sawyer in his book, The Inhabitants of the Philippine Islands, p. 415, published in 1900.)

Mr. TAWNEY. Will the gentleman permit an interruption?

Mr. GAINES of Tennessee. Yes, if I have the time.

Mr. TAWNEY. The gentleman has been to Manila, I understand?

Mr. GAINES of Tennessee. Yes.

Mr. TAWNEY. And has seen a great many of these people?

Mr. GAINES of Tennessee. Yes.

Mr. TAWNEY. Will you tell the Committee of the Whole what percentage of the people of the Philippine Islands are capable of self-government?

Mr. GAINES of Tennessee. What per cent? There are thousands of Americans whom we know are incapable of self-government, at our high standard at least.

Mr. TAWNEY. About what percentage of the Filipinos?

Mr. GAINES of Tennessee. I will state this: Excluding the savages in the mountains, at least a majority of the natives can read and write their native dialects, while many can speak foreign languages and thousands can speak and write Spanish and sister native dialects. The Christians number about 6,000, and then there are others forming the same or superior strata of society, white foreigners who live there, who must be considered in this calculation.

Mr. HILL. Not even more than 2 per cent of them can speak the Spanish language.

Mr. GAINES of Tennessee. How many in our Congressional party of seven who went to the Philippine Islands who could speak Spanish? Not one. Can the gentleman from Connecticut speak Spanish or French or German?

Mr. HILL. But we were not in a Spanish country.

Mr. GAINES of Tennessee. No; that is true, but we were in "the Philippine Islands—American territory," unfortunately; and to deny these people autonomy simply because they can not speak a national language, but can speak their native dialect and read and write it, while thousands of them can speak and read and write Spanish, some French, and some English, and some German, is to do them a great injustice. The question is, Can they speak, read and write, and understand their native language? A majority, I say, can.

Mr. JONES of Virginia. I will state, in reply to the suggestion of the gentleman from Minnesota, that Governor Taft thinks about 5 per cent can speak Spanish.

Mr. HILL. He does not put it as high as 10 per cent?

Mr. JONES of Virginia. I think that most of the writers on the subject put it at 10 per cent.

Mr. HILL. Governor Taft says 5 per cent.

Mr. TAWNEY. Suppose that 5 per cent of them can read and write, do you think for 5 per cent of a people of 10,000,000 is capable of self-government?

Mr. GAINES of Tennessee. How much?

Mr. TAWNEY. Do you think that 5 per cent should govern 95 per cent?

Mr. GAINES of Tennessee. That would not be the case under a fair election law, allowing those to vote who can read and write their native tongue or English or Spanish. Again, your basis is false and unfair. You confine the qualification to Spanish, a foreign language, when these natives are Malays, not Spanish. Let me give you what Governor Smith said to the Taft Commission, as shown by Senate Document No. 190, page 240, Fifty-sixth Congress, in speaking of an election in the island of Negros:

Judge TAFT. What did the vote run up to?

General SMITH. Five thousand in less than a week's registration. I think there were fully 15,000 to 20,000 voters on the island. That is, with the educational and property qualification.

Mr. HILL. Will you give me a minute?

Mr. GAINES of Tennessee. I will.

Mr. HILL. I just want to state that a colonel of the Regular Army told me he was called upon to prepare his district for civil government in the city in which his headquarters were placed, a city of 5,000 people. He applied the tests of the census, the three tests for holding office under the Spanish Government, having $250 worth of property, or an annual tax of $15, and knowing how to read and write, any one of these tests qualifying an elector, and he found in the entire population of 5,000 people 28 voters. That is all.

Mr. GAINES of Tennessee. But there might have been "5,000 people" who would or could qualify and failed, or did not want to qualify, or did qualify but did not want to vote and did not vote, leaving only "28 votes;" that is, 28 men who actually voted. Your statement is too loose, too general. It proves only "28 votes" were actually cast, and nothing on the point, who could qualify.

The CHAIRMAN. The time of the gentleman has expired.

Mr. JONES of Virginia. Mr. Chairman, I yield ten minutes to the gentleman, but I just want to use a minute of his time to say in reply to what my friend from Connecticut has said, that it is a fact, however, that under the legislation of the Taft Commission the governors of these 36 provinces, well pacified and are now under civil rule, have been elected by voters.

Mr. HILL. I have no doubt.

Mr. JONES of Virginia. And it is a fact that the very bill that we are discussing provides that the islands, the civilized portions, are to be divided into two districts, and gives the people of those districts the right to elect two commissioners to represent them in Washington.

Mr. TAWNEY. How many districts?

Mr. JONES of Virginia. Two.

Mr. TAWNEY. It is fifteen in one and one hundred——

Mr. JONES of Virginia. The gentleman is very much mistaken about that. There are only two commissioners to be sent to Washington.

Mr. TAWNEY. I understood the gentleman——

Mr. JONES of Virginia. The islands are to be divided into two districts. One is to be elected in one and one in the other.

Mr. TAWNEY. For Representatives?

Mr. JONES of Virginia. That is what I am speaking about.

Mr. TAWNEY. Representatives in the Congress of the United States?

Mr. JONES of Virginia. That is what I said.

Mr. HILL. The gentleman does not think it is right because it is in the present bill?

Mr. JONES of Virginia. Oh, no.

Mr. HILL. I fully agree with you.

Mr. GAINES of Tennessee. If the gentleman will allow me, I will further reply to the gentleman from Minnesota [Mr. TAWNEY]. In proceeding to answer this question, I want to say I had not the pleasure of meeting on this side of the world, although I met him on the other side, the recent witness of the Government, Señor Filipe Buencamino. I asked him these questions in Manila:

Q. What per cent of the Filipinos in Manila can read and write?
A. It can be said that there are more Filipinos who can read and write in the archipelago than Spaniards.
Q. I want to find out what per cent of the Filipinos can read and write here in Manila.
A. In Manila alone? I can assure you that there are 50 per cent in Manila, but not all in the Spanish language, but in different dialects.
Q. Where were you educated?
A. Here in Manila. [He is a full-blood Filipino. E. O. Johnson.]
Q. What per cent of the Filipinos can read and write in Luzon?
A. Twenty-five per cent, and in all the Visayas about the same, but in their own dialects, because the friars desired them to read about religious matters.
Q. But they can read and write in their own dialects?
A. Yes.
Q. What per cent of the Filipinos in the Philippine Islands can read and write?
A. Twenty-five per cent.
Q. What per cent in the island of Jolo can read and write?
A. I have always understood that Mindanao is excluded in speaking of the Philippines.

This testimony was taken stenographically, and is published in one of my speeches of this session, at page 6965, June 10, 1902.

Dr. Jose Albert, president of the Federal party, in a stenographic interview which I published in the RECORD February 19, 1902, at page 2038, said:

I do not know what per cent of the Filipinos can read and write, but I can assure you that there are more Filipinos that can do so than there are Spaniards. Padre Vigil, who was the bishop of Oveida, Spain, wrote a book on the Philippines, and he said that a greater per cent of the Filipinos could read and write than Spaniards.

So Dr. Albert corroborates Buencamino. They are both very intelligent and would know such things possibly better than anyone. Dr. Albert is a leading physician in Manila.

Then, here is a witness from the neighborhood of my colleague [Mr. GIBSON], Mr. Hollingsworth, of Jacksboro, Tenn. I believe he represents the county in which Jacksboro is the county seat. He was in Cuba and had a long service, and afterwards he was honorably discharged. He afterwards went to the Philippines and came out, with an honorable discharge, because he did not want to stay there any longer.

Here is what he says on this point:

Q. What per cent of the people in Manila city can read and write English?
A. I will say about 1 per cent. There are a lot of French, Spanish, and Germans who speak English. Of the Filipinos about one-half per cent speak English.
Q. How many can read and write Spanish?
A. Thirty-three and one-third per cent.
Q. What per cent can read and write their own dialect?
A. About 25 per cent. I have not thought about this particular question before. In the provinces more can read and write the native dialect than in Manila. In the provinces you strike a better class; they are more like the farmers in the United States. About 33⅓ per cent in the provinces can read and write their own dialect.

This language was spoken to me and reported stenographically, and is published, CONGRESSIONAL RECORD, June 10, 1902, page 6965.

Lieutenant Crockett, who had served two and one-half years in the Philippines, and established many schools in the Philippine Islands, and is now there, in an interview with me, written out at the time, says:

About 25 per cent of the natives who live in the lowlands, or Filipinos generally, can read and write their own language. Back in the mountains none of them can read and write. They are ignorant in the mountains of Tennessee and Virginia, too.

Mr. Crockett was a Virginian.

A soldier who has served as an officer in the American Army in the Philippines was in the gallery when my speech was delivered, and since then voluntarily has handed me the following pertinent valuable data on the subject. He is a gentleman of good reputation, education, and evident ability, and gives me as references several members of this House from his native State. It reads as follows:

During the Philippine debate in the House of Representatives last evening (Monday night) a Democratic member (from Tennessee ?), in describing the Malolos congress and other Filipino lawmakers and other Filipinos in authority, was interrupted by a Republican member of Congress, who asked, "How many Filipinos can read and write?" The Republican member of Congress then went on to tell that a colonel of the Army had said that only a very few—5 per cent—could read or write, as proved by the number of electors who voted at an election. The writer personally conducted the elections of the Filipino authorities for three different towns. The qualifications of electors were as follows: Males of a certain age (either above 21 or 26 (?) years) of the following three classes: First, men who had previously held certain offices under the Spaniards; second, men who owned or paid taxes for a certain amount of property, and third, men who could read and write either English or Spanish.

It will be seen that the third qualification does not include those who could read and write as the Republican gentleman wished to make it appear, but only those Filipinos who can read or write one of the two foreign languages (English or Spanish) mentioned.

The civilized Filipinos with whom the United States have been at war are numerically speaking about the same proportion of the inhabitants of the Philippines as are the Caucasion or white race in the United States.

The civilized Filipinos with whom the United States is at war have a language of their own, and their language is neither English nor Spanish. (It is not Spanish.)

About perhaps 5 per cent of the Filipinos speak Spanish in addition to their own language. What per cent of the people of the United States can speak a foreign language in addition to their own language, especially Americans born in the United States? All Filipinos practically were born in the Philippines.

The fact is that there is perhaps less illiteracy among the Filipinos than among the Americans, if a test of reading and writing is made.

The Filipinos all read and write their own language with very few exceptions. Perhaps not more than 1 per cent of the Filipinos can not read or write.

In a town of 5,000 inhabitants there was only one person who could not, when called upon, sign a name, and that one person was a totally blind old woman. In the same town there were only two Filipinos who could read and write Spanish; none could read and write English, but all could read and write their own language, Tagalog. The presidente of this town could not read or write anything but his own language, and that he could do, and such was the case with all other elected officials of that town. Yet those Filipinos governed their people thoroughly well, even better than Americans can do, because the Filipinos are great admirers of those in authority, and they permit themselves to be governed by their own people through love and respect. The Americans in authority govern the Filipinos through fear, because of the American Army behind the American Army officers and other American governors.

The Filipinos hate the Americans more than they ever hated the Spaniards, because of their great disappointment at being subjected by the Americans after the Filipinos had accomplished so much against the Spaniards.

The Filipinos were fighting for independence, and the word written by Aguinaldo (and his officers who were with him) upon the last orders and communications sent out by Aguinaldo from Palanan, where he was captured, was the word "Independencia," meaning independence. Thus it will be seen Aguinaldo fell fighting for independence with his flag containing a sunburst, three stars, and the colors red, white, and blue.

An old Army officer who had been stationed in Cavite Province, in a conversation stenographically reported, when asked about the per cent of the people in Cavite Province who could read and write, said:

Not 1 per cent can read and write the English language. About half can read and write their own dialect.
Q. Then, if our election law permitted those who could read and write their own dialect to vote, how many could do so?
A. About one-half, and if required to read and write English, about 1 per cent.

He had held an election in Cavite Province.

At Santa Cruz six leading Filipinos, five officers by American appointment, said to me "that 80 per cent of the people could read and write their native dialect; that they read bibles, books, and newspapers, and the children loved to go to school, and were bright, and quick to learn."

Mr. TAWNEY. That was in the city of Manila?

Mr. GAINES of Tennessee. No, in Santa Cruz. Mr. Hollingsworth spoke about Manila, and many provinces where he had been, and I think associated with the schools; but Manila is a reflex of the whole island, excluding the Mohammedan districts and the savage tribes in the mountains.

Mr. TAWNEY. Does the gentleman mean to say that the intelligence of the people of Manila prevails throughout the island?

Mr. GAINES of Tennessee. I mean this: that you will find as intelligent people outside of the city of Manila or its environments as you find in Manila, excluding, of course, the savages and the Moros. I was informed the Moros speak, read, and write in Arabic. Buencamino told me this and some others. I saw Dato Manday in Mindanao. He was very bright and well educated in his native dialect and wrote his name in English as plain and as well as either of us can write ours, and I have his autograph at my office.

In proof of the general intelligence of the people outside of Manila I cite the gentleman to the fact that one of the supreme judges in the Philippine Islands, Mapa, is from Negros; so is Luzuriaga, of the Philippine Commission. He was elected president of the native congress that was organized there in November, 1898, and continued down to March, 1899, to run the government, with his associates, the governor and others, whom they elected, and is a very able man.

General Smith speaks in the highest terms of him and several others, who, with Luzuriaga, organized this native government in November, 1898, and you would be surprised how General Smith defends them against just such charges as have been made on the floor of this House to-night and during this debate, and everything he claimed for them has been proven by subsequent events, both in Negros and since these men have been appointed to these high places in Manila.

General Smith in his testimony before the Taft Commission (Senate Doc. 190, Fifty-sixth Congress) thus speaks of Judge Mapa:

Next to Arelano I consider him the ablest man in the Islands.
Judge TAFT. He has been a bit doubtful in his allegiance?
General SMITH. He is a man of honor, I think, lofty ideas, lofty sentiments.

General Smith had no trouble with this Negros government. He went down there in March, 1899, recognized the native government, continued its officers, recognized and executed some of the laws which the native congress had recently enacted repealing old Spanish laws, and soon ingratiated himself deep in the hearts of these people. He had no trouble; no bloodshed.

My heavens, suppose General Merritt, when he went to the Philippines, had been thus conciliatory with the Malolos government, what would we have saved!

Much, if not all, of the horrible results and consequences that have followed because he undertook to crush and did crush this Malolos government and demanded "unconditional surrender" before he would treat with these people.

Then, I will cite the gentleman to another case. General Torres was from Cebu. He was attorney-general under General Merritt, and is now supreme judge at Manila. If the gentleman needs further proof, I cite him to the four or five thousand Filipinos now holding office in the Philippine Islands under "civil-service" examinations. Intelligent natives are all over the island, excluding the Moros, who are not Filipinos (and the savages), and there are many appointees amongst the Moros who may not be, for all I know, under the "civil service." But I dare say the Moros are bright and intelligent and well read in their native dialect. I think if the gentleman will take up the Schurman Commission report, and read it, he will find that these commissioners stated they were surprised to find this intelligent class throughout the island, as I have stated.

Mr. BURNETT. Will the gentleman allow me a suggestion?

Mr. GAINES of Tennessee. Certainly.

Mr. BURNETT. This bill provides for an election by the people, with certain qualifications?

Mr. GAINES of Tennessee. Yes.

Mr. BURNETT. If they can find enough to select 50 members for the general assembly, does not the gentleman think they could find enough qualified to sit on a jury?

Mr. GAINES of Tennessee. Of course. It is absurd to say that four or five thousand Filipinos have qualified under civil service and they can not get a jury of 12 good men.

Then there are white people there—Spanish, French, Germans, English, and of course some Americans.

One of the reasons why a small vote is cast in some elections is because of the property qualification. The masses there are as poor as Job's turkey, for the reason that the lands are held by a few. The friars, for instance, held "about 90 per cent of the farm lands in Cavite province." The people could not buy for two reasons—they had no money, and if they had it these lands were held to rent and not for sale.

Mr. HILL. The gentleman from Tennessee ought not to make that statement, because the election is not governed only by property qualification; that is only one. He does not have to have property; he may have any one of the three things.

Mr. GAINES of Tennessee. I know my friend from Connecticut thinks he is right and he always does. I am satisfied that I am correct if my informant was correct and he had held several elections. Of course the qualifications may be different in different provinces and possibly so in the cases referred to in this debate. I remember that one of the Army officers (whose interview I have) said to me that the reason why the vote was so very small in the population of 3,000 males, there being only 87 votes cast in one town, was caused by, to use his words "the restrictions and qualifications."

This old officer of the Army, who had held the election in 1901, gave the reason why the vote was so small to be this:

The election law required that the voters should be 21 years and over and one who had paid property tax on property valued at $500 or over, and to read and write the English or Spanish language. The native dialect in this province is Tagalog.
Q. What caused this small vote?
A. The restrictions and qualifications.

Of course the regulations may have been different in different provinces, as I have suggested, or the same at different dates and afterwards varied, but you see the hardship wrought where a person does not own property and who can not speak and read English or Spanish, but who can speak, read, and write—and intelligently—his native dialect—when you deny such person the right to vote. He may be as intelligent as we are and talk as well in his dialect as we in ours.

In organized society the elective franchise is a grant by law. Let the election laws be one way or the other, they can be changed in the Philippine Islands. If they are harsh they can be modified; but certainly the intelligent people who speak the native dialect, read and write it, and own property, ought not to be shut out from the elective franchise by demanding that they should speak and read and write a foreign tongue, with or without property.

Mr. TAWNEY. I want to ask the gentleman this: Is it not a fact that in the absence of any property qualification, if they possess the requisite intelligence, they could vote notwithstanding the fact that they had no property?

Mr. GAINES of Tennessee. They had to pay a property tax. That is where the trouble came in in the two cases I cited—one from Negros, the other, Cavite.

Mr. TAWNEY. But that is not an exclusive qualification.

Mr. GAINES of Tennessee. But it was in part the qualification in these cases. It may have been different in different cases. I will insert here an interesting paper in print.

[The Manila Times, Wednesday, November 6, 1901.]

PHILIPPINE ISLANDS IMMIGRATION.

The following tables, secured from the statistical division of the custom-house at Manila, give interesting information concerning the passengers arrived from foreign ports at entry ports in the Philippine Archipelago during the year ended June 30, 1901:

Nationality.	Male.	Female.	Total.	Neither read nor write.	Less than $30.	Previously in Philippine Islands.
American	1,164	668	1,832	.....	57	638
Chinese	11,520	206	11,726	8,226	11,411	11,482
Filipino	619	339	958	197	496	956
Spanish	503	186	687	2	129	586
Japanese	211	188	399	103	23	182
Sulu	276	27	303	286	275	303
English	339	101	449	2	41	231
German	89	12	101	.....	1	39
East Indian	179	9	188	72	71	68
French	33	11	44	.....	3	26
All other	249	91	353	48	65	166
Total	15,182	1,838	17,020	8,936	12,572	14,657

Nationality.	Occupations.								
	Engineers.	Clergymen.	Lawyers.	Doctors.	Teachers.	Editors.	Clerks.	Laborers.	Merchants.
American	23	20	30	51	64	9	102	2	121
Chinese	2	1	.....	3	1	2	299	8,120	2,536
Filipino	4	1	2	3	.....	1	12	32	52
Spanish	6	74	.....	6	.....	2	19	1	206
Japanese	1	.....	6	.....	.....	.....	9	4	102
Sulu	.....	.....	.....	.....	.....	.....	.....	30	225
English	38	4	2	4	.....	3	49	2	85
German	4	.....	.....	7	.....	.....	7	.....	43
East Indian	.....	.....	.....	.....	.....	.....	4	7	119
French	3	.....	.....	.....	.....	.....	2	.....	17
All other	10	.....	.....	1	.....	1	30	7	120
Total	91	100	40	75	65	18	533	8,205	3,426

These tables do not include Army or Navy officers or enlisted men, neither do they include passengers who arrived on United States transports prior to May 1, 1901.

It will be seen that exclusive of officers and enlisted men and members of their families 17,020 passengers from foreign ports arrived in the Philippine Archipelago during the fiscal year 1901.

The Chinese lead, with a total of 11,726; next in number come Americans, with a total of 1,832, and next in order Filipinos, to the number of 958.

The figures show that the Chinese travel back and forth between the Philippines and China averages about 2,000 per month, as the number going and coming are about equal.

The tables show sexes separately and also show the number of the various professions and occupations of the immigrants, with data as to illiteracy, previous residence, etc.

Those unfamiliar with the manner of conducting business in this soon to be chief city of the Orient will marvel at the unusual number of merchants in the list, but it must be remembered that Manila is a city of many merchants of medium means, and not a city where the few monopolize the business.

Why, look at the Malolos congress. There were 91 members of that body, and Dr. Albert, who was a member, now president of the Federal party, said to me "they could all read and write." They framed the Malolos constitution; they wrote proclamations; they issued state papers, that I say, and the Schurman commissioners say, and others more capable than myself to judge, that these papers are wonderful productions and reflect the greatest credit upon the Filipino people and their representatives who created them.

No man can read them who is fair-minded and honest with himself and not be astonished, and especially so when you listen to the slander hurled here and elsewhere on these people, that they are a lot of "children" and "savages," except a few.

Few indeed! Four or five thousand have taken the "civil-service examination" there and are now in office, and certainly there must have been 40 or 50 applicants for examination for each office if they are anyways like our own people.

We should look at the situation in all fairness and in justice to ourselves, in justice to the Filipinos, and in justice to justice, because it is justice.

I say that I have presented here from official records a most remarkable case of where we have knocked down a republic because you say the Filipinos are incapable of self-government, and then you turn right around and put in office the natives who created that republic because they wanted a republic; they wanted independence and believed they were going to get it, and hence they thus acted.

Mr. JONES of Virginia. I yield the gentleman five minutes more.

Mr. GAINES of Tennessee. Now, Mr. Chairman, you must see that these people feel that we have not dealt fairly with them in not giving, or at least promising to give, them independence at a near day. I can substantiate every statement I have given by depositions and authentic productions, both English and American, in the Philippine Islands and out of them.

Why, sir, take the very congress that created the Philippine republic. They wrote a constitution that was satisfactory to them—that the Schurman Commission bragged on, as I have already stated. Tavera, Rosario, Florentino Torres, and Arellano wrote in about four days and submitted, at the request of the chairman of this Commission—a constitution which they have incorporated in the first volume of their report—which they say is one of the remarkable productions of the times. These men were insurgents or their allies.

Mr. TAWNEY. How long did it take the fathers of our Republic to write our Constitution?

Mr. GAINES of Tennessee. It seems to me the part of it was written about forty years ago which the gentleman now disobeys in this very bill, and which I am trying to have enforced under my oath and unseared conscience. As we all remember, the first constitution that was framed—the articles of confederation—was weak. The second one was unsatisfactory in part, and that, we immediately went to work to amend as soon as we got the chance—in the First Congress—and to get what? Jury rights, the very thing you now deny these Filipinos and the Americans in the Philippine Islands.

A MEMBER. Did not those people in the Philippines merely copy our Constitution?

Mr. GAINES of Tennessee. No, sir. Of course they had books. As a matter of fact, they did not "copy;" but suppose they did? Did we not "copy" ours in many respects? The Republicans are charging that these people knew nothing about our Constitution, nothing about our Declaration of Independence, nothing about the doctrine of the consent of the governed; that they were absolutely, densely ignorant "children," and some say they are 10,000,000 of savages.

It is an outrage, Mr. Chairman, to thus slander these people. I thank God that those who know me best believe that my effort through life has been to deal fairly, like a man, even with my enemies; that even when I strike them, I strike above the belt. Instead of confessing the facts, we find these people persistently misrepresented, through ignorance or malevolence, by gentlemen who speak, if they speak at all, on the other side.

I notice conspicuously that some gentlemen on the other side of the House who went to the Philippine Islands last year have not spoken at all on the Philippines or this subject. Who are they? All Republicans. There is the gentleman from Connecticut [Mr. HILL], who has failed to speak, and the gentleman from Pennsylvania [Mr. JACK], and the gentleman from Iowa [Mr. HULL], and a Senator from Nebraska. They have all been mute on this great subject. Are the gentlemen afraid to tell the truth? Did you go all the way to the Philippine Islands and return to remain mute?

Mr. Chairman, it is a sin in the sight of man and God that these people should be charged with being treacherous, traitors, and savages, and incapable of doing anything but to draw water and to hew wood for a lot of carpetbaggers from this country and Europe and Asia and Africa who are peopling these islands and for purposes selfish. They are there to honeycomb this, by nature, a brown man's country, the native home of the Filipino.

We are doing there what our forefathers denounced England for doing a century ago, and struck for their independence that it might be undone.

We are filling that island with a swarm of officeholders—6,123 already there—4,000 or 5,000 natives, by the grace of Governor Taft's wisdom; the balance are foreigners, who hate the Filipinos, who call them "niggers," which insults them profoundly, and who treat them inconsiderately in all manner of ways; and this is the fixed policy of the Republican party.

I will here insert the following letter:

CARE OF FISKE WARREN, Esq., 8 MOUNT VERNON PLACE.
Boston, Mass., 24th June, 1902.

The Hon. J. W. GAINES,
House of Representatives, United States, Washington, D. C.

DEAR SIR: There was one item in your letter to which I forgot to refer in my reply. You ask, "Was the promise or so-called promise of independence by American authorities verbal or written? Who made the promise, and when?" All the Filipinos, as far as I know, have understood that the promise was verbal. Aguinaldo, to whom the promise was made, has always declared it to be verbal. In his first and latest authoritative statement he declares it to have been a verbal agreement, as will be seen by the two inclosures marked in red.

I also forgot to mention when speaking of the part taken by the Filipinos in the present government that all the fiscals provincial now employed were so employed under the Malolos government. These officers occupy an important and, I consider, an indispensable relation between the people and the American officials. Thus, in the report made last January by Mr. James Ross, governor of Ambos Camarines, he says: "All the officials are performing their duties in an honest, faithful, and intelligent manner, and if this province has not been specially favored in the matter of native officials, then the others are indeed to be congratulated." All these men have displayed in their work the most commendable zeal, ability, and integrity, and I have had at all times their active assistance and most unqualified support. To Mr. Fulgencio Contreras, provincial fiscal, and to Mr. Ramon Enrile, provincial secretary, are due the thanks of the government not only for duties well and faithfully performed in their respective departments, but as well for the valuable services they have rendered in the equally important work of bringing their people to an understanding of the new conditions," etc.

I shall be glad if you will kindly add the above to my statement sent you yesterday.

Sincerely, yours, SIXTO LOPEZ.

I desire to extend my remarks on the climate of the Philippine Islands. It is a vital question, and we want all the light we can get.

Manila was utterly repudiated and condemned as a suitable region for a sanitarium by the Taft Commission in its report to the President, January 24, 1901, pages 64-65, and it is clearly shown that the climate of Manila and the Philippine Islands is extremely unhealthful and destructive in the extreme to white people, as well as to the brown natives in less degree.

This Commission, after examining the entire archipelago, found only one suitable locality and climate in the Philippines for a sanitarium, and that place was Benguet, about 177 miles north of Manila, and the report shows that even there the humidity is much greater at times than in Manila.

At page 64 the Taft Commission, after stating that our soldiers "suffer more or less severely from diarrhea, dysentery, and malaria," says:

In the treatment of these last-mentioned ailments (which I have named) it is well known that a suitable change of climate is often far more effective than are any drugs which can be administered.

RECUPERATION FROM WOUNDS OR DISEASE SLOW.

Recuperation from severe wounds or wasting diseases takes place slowly in this tropical region. Thus far it has been necessary to send a considerable number of sick soldiers to Japan or to the United States for recuperation. This involves very heavy expenses and frequently loss of life as well, for even with the most perfect transports and hospital ships it is impossible during a rough sea voyage to give sick men the care which they can have on land.

WHAT EXPERIENCE SHOWS.

Experience has shown that an occasional change to a cooler climate is very desirable, even for those who live in the more healthful parts of the archipelago. Especially is this true of white children, who usually do very well here up to the age of 8 or 10 years, and then often seem to require a change.

In view of the facts set forth it becomes a matter of great practical importance to ascertain whether or not there exists within the limits of the archipelago any accessible region presenting suitable climatic and other conditions for the speedy recuperation from wounds, tropical diseases, wasting illness of any sort, or from the injurious effects of long-continued residence in a hot climate.

In view of the facts above set forth it becomes a matter of great practical importance to ascertain whether or not there exists

within the limits of the archipelago any accessible region presenting suitable climatic and other conditions for the speedy recuperation of sufferers from wounds, tropical diseases, wasting illness of any sort, or from the injurious effects of long-continued residence in hot climate.

Such a region should have cool, pure, bracing air and a plentiful supply of good water. It should be sufficiently extensive to allow the erection of hospitals for the sick and of summer homes for a considerable population. It should, if possible, be suited to the pasturing of cattle and the growing of fruit, vegetables, and grain.

TAFT COMMISSION'S OPINION AND CONCLUSION AS TO A SITE FOR A SANITARIUM—MANILA REPUDIATED.

They say:

It is a well-established fact that no such region exists in the central or southern islands, with the possible exception of Mindanao. Mindora has very unhealthy lowlands.

The Commissioners then describe and show that even the mountain regions of the central and southern islands are unfitted for a sanitarium. They then take up Luzon, wherein Manila is located, and say:

Luzon remains.

And after describing the mountains of Luzon, contiguous to Manila, say:

They [the mountains] are of a character already described for the central and southern islands and are therefore unsuited for the purpose in question—

that is, a sanitarium site, which, as we see, must have good water, pure air, and surrounding agricultural land.

Thus we must see that the Commissioners in repudiating the mountains which surround Manila as unfit for a sanitarium necessarily repudiate Manila as a suitable place for a sanitarium. Indeed, the Commissioners do not hint at Manila being a suitable place for a sanitarium.

DISEASES PECULIAR TO THE PHILIPPINES AND THE CITY OF MANILA—MANILA ONE OF THE MOST IF NOT THE MOST UNHEALTHY LOCALITY IN THE ARCHIPELAGO.

The Philippines are near the brown countries of the Old World. Manila is the main seaport. Contagion is brought from China and Japan daily by ships. Hence it is almost impossible to exclude contagion from the Philippines. Cholera is now raging in Manila and throughout the island among the natives, while some of our soldiers have died with it.

The press states:

[From the Nashville News, June 14, 1902.]

MUCH CHOLERA IN MANILA.

SAN FRANCISCO, June 14.—Former Quarantine Physician W. E. Parkman, who has returned from Manila, states that cholera is virulently epidemic in the Philippines and is increasing in violence. Fifteen and twenty deaths occur daily in Manila. It is the worst outbreak since 1882. The natives evade the sanitary regulations and kill their sick.

The Taft Commission's Report, at pages 62, 63, 64, in their report of 1900, says:

Asiatic cholera appeared in the Philippines in 1888 and 1889. Cholera has not appeared in the islands since that time, but we are near China, which is the breeding ground for disease, and epidemics imported from that country can be avoided only by the maintenance of a strict quarantine service.

A strict military quarantine has been maintained at Manila and yet cholera is raging there now. When this Taft report was written (May 31, 1901) "cholera was in Singapore and on shipboard at Hongkong."

The number of deaths from cholera in the Philippines as stated by the press is in the thousands—number of cases still more.

The Taft Commission at page 63 state that in 1899 "bubonic plague appeared in Manila, and in one week there were 14 deaths out of 17 cases."

It is undisputed, I believe—certainly it can not be successfully denied—that leprosy is a common disease in this place.

Contagion from these brown countries near the Philippine Islands continues to threaten and even curse and blight the possibilities of the city of Manila and destroy the lives of many of the inhabitants there. In addition, Manila has diseases which seem to be peculiar to that place. Manila is in a low, flat locality, poorly drained because of natural conditions, while the ebb and flow of the tide in the rivers that penetrate the city constantly, as it were, churns up the disease germs that poison these waters, already foul, and so much so that those who bathe in them or who inhabit the city of Manila inevitably become more or less diseased by tropical contagion.

DEATHS AND BIRTHS IN TEN MONTHS IN MANILA.

Let us see now if what I have said is not practically and literally true. Take the report of the board of health, found in General Sternberg's last official report, page 139, and we find that this board states that there are 244,732 inhabitants in Manila, excluding the army and navy; that 60 supervisors are constantly at work in this city, and that each house each week is inspected; and yet this report states that for ten months of the year 1900 there were 8,761 deaths in Manila, or 42.54 persons died of every 1,000, exclusive of the army and navy.

I stated some time ago from the best authority that the death rate among the children of Manila was about 30 per cent. I see from a recent report of the board of health of Manila to the Taft Commission that the "annual death rate" to every 1,000 persons is about 41.29—this was the rate for last "November;" and that the birth rate for the same time was 24.25 per 1,000 persons.

THE DISEASES PECULIAR TO THE CITY OF MANILA.

General Sternberg's report for 1901, page 139, states that "the board of health of Manila has had to contend with the following infectious or contagious diseases: Bubonic plague, smallpox, tetanus, typhoid fever, tuberculosis, whooping cough, measles, mumps, beriberi. Bubonic plague is dealt with in the most stringent manner. Two hundred and fifty-four cases, with 199 deaths, have occurred, as follows: Chinese cases, 166—deaths, 135; Filipino cases, 86—deaths, 62; Spanish, 1—deaths, 1; American, 1—deaths, 0."

This is Manila's history in the face of the work of the board of health, 60 inspectors, weekly inspection of every house, and under the rules and regulations of the civil and military government.

At page 141 of Sternberg's report for 1900, we find that between March and April 10, 1901, the total number of prisoners of war in Manila was 4,449; total sick, 1,336. We must presume that these were all natives, and yet we find that nearly one-fourth of the number were sick. It seems that the natives do not enjoy good health in these islands, and, like the whites, can not be or are not acclimatized, which Major Mason, of the Army, says the whites can not do.

SMALLPOX IN MANILA.

On page 140 of this report we read that smallpox in Manila has been very mild, with 101 cases and only 2 deaths; yet 22,590 children and 43,128 adults, this report states, had been vaccinated. What else does this report state about Manila? "There were 159 lepers under treatment in Manila, 27 of whom died." The smallpox may have been "mild" in form, but in the face of the work of 60 inspectors, the board of health, and the military and civil rule which prevails there, and 65,000 vaccinations, there were 101 cases of smallpox in Manila.

SMALLPOX FATAL TO WHITES IN PHILIPPINES.

This report does not state that the smallpox was confined to the natives, but we presume such was the case, in view of the fact there were only two deaths, and as Major Hoyt says "smallpox is very fatal to whites in the Philippine Islands." Major Hoyt, as I showed in my former speech, is an expert on tropical diseases and went to the Philippine Islands for the purpose of investigating health conditions there, and his letter to the Taft Commission can be found in Volume I, pages 262, 263, and 264.

Surgeon-General Mason, at page 235 of Sternberg's last report, says:

Smallpox is widely prevalent during the dry season; almost completely disappears during the rains.

Inasmuch as it rains nearly all the time in the Philippine Islands, but as it rains less at some times than others, it might be well to classify the seasons as dry rains and wet rains. It is hard to tell which is the dry and which is the wet season in the Philippines, and I am reminded of what a distinguished Republican, Mr. Murat Halstead, "war correspondent in America and Europe, historian of the Philippine expedition in his 'Story of the Philippines,'" says on the subject of seasons in these islands. I quote from him, on page 288, as follows:

The Spanish description of seasons is as follows:
Seis meses de lodo—six months of mud;
Seis meses de polvo—six months of dust;
Seis meses de todo—six months of everything.

I confess I saw "mud" in the Philippines, no "dust," and "everything," as to climate that forced me to believe and now insist that the Caucasian race can not and should not as a rule live but a brief time in the Philippine Islands, and that that country is a fertile place for about all the ills to which the white man's flesh at least is heir.

The total number of patients received in the hospital at Presidio, Cal., during the last fiscal year was 5,587, of whom 3,513 were received from the Philippines (at this particular hospital) from July 14, 1900, to June 28, 1901—eleven months and fourteen days. This is shown on page 86 of Sternberg's last report. On the next page (87) we find the diseases inflicting these soldiers as follows:

NOSOLOGICAL INDEX OF DISEASES TREATED IN THE UNITED STATES ARMY GENERAL HOSPITAL, PRESIDIO, SAN FRANCISCO, CAL., SINCE JULY 1, 1899, TO THE END OF THE FISCAL YEAR, JUNE 30, 1901.

The following nosological index has been compiled with a great deal of care from the records of the hospital. While it can not be said to be complete in every instance, it gives a general idea of the number and character of the cases which have been admitted to this hospital. It will be noticed that the total number of cases classified in this index does not equal the total number admitted to the hospital, but this is explained by the fact that the diagnoses in many of the cases admitted have been of uncertain character and have not been included in the index, although they might be included under the vague head of "undetermined diagnoses."

The index is arranged according to the divisions given in the Medical Manual:

I.—*Infectious diseases, general and local.*

Diseases.	Regulars.	Volunteers.	Total.
Scarlet fever	1	1	2
Measles	162	54	216
Variola	4	22	26
Vaccinia	36	40	76
Varicella	0	1	1
Influenza	22	1	23
Malarial fever, pernicious	2	1	3
Malarial cachexia	127	117	244
Erysipelas	4	4	8
Septicemia	1	1	2
Mumps	63	28	91
Diphtheria	8	12	20
Typhoid fever	76	131	207
Cerebro-spinal meningitis	2	0	2
Rheumatic fever	16	8	24
Malarial fever:			
Intermittent	329	314	643
Remittent or continued	51	92	143
Tuberculosis of lungs	124	99	223
Tuberculosis of other organs	5	2	7
Carcinoma	8	1	9
Sarcoma	1	0	1
Syphilis	75	42	117
Gonorrhea	69	72	141
Gonorrheal epididymitis and orchitis	46	48	94
Chancroid	133	118	251
Other diseases of this class	15	26	41
Total	1,380	1,235	2,615

THE PHILIPPINE COMMISSIONERS, THROUGH IGNORANCE, FALL INTO A FATAL ERROR THAT MISLEADS THE PUBLIC AT LARGE.

At page 63 of the Taft Commission's Report of January 24, 1901, this distinguished Commission states:

That health conditions are, on the whole, surprisingly good in the Philippines is conclusively demonstrated by comparing the sick report of our troops while in camp in the United States with the reports for the time during which they have been engaged in active service in the Philippines.

This is a great blunder and fatally and mischievously erroneous, and is flatly, though unwittingly, contradicted, and shown to be utterly without foundation and absolutely erroneous by General Sternberg's last report, pages 127 and 128, from which I take and tabulate the following words and figures:

Death rate of troops serving in United States per 1,000 of strength.

	1897.	1899.	1900.
All causes	5.11	7.89	7.78
Disease	3.14	6.56	4.83

Troops serving in the Philippine Islands.

	1899.	1900.
All causes	30.58	28.75
Disease	15.30	20.26

Troops from Philippines serving in China.

	1900.
All causes	47.76
Disease	23.62

"Fortunately, the mean strength of men in China was small—1,947," says General Sternberg.

These official figures show the death rate, from "all causes" and from "disease," of our troops serving "within the United States" and within the Philippines and those who went from the Philippine service into China.

In 1897 all our troops were "serving within the United States," at home. This was before the Spanish war begun in 1897; and it appears that we lost by death, caused by "disease," of troops serving in the United States, 3.14 soldiers out of every 1,000. In 1899, during the war with Spain, we lost 6.56 of troops "serving in the United States," caused by "disease," and in 1900 we lost 4.83 out of every 1,000, caused by "disease." Doubtless this increased rate was caused by these troops having been in the service in the Philippine Islands, Cuba, and Porto Rico; but in the Philippines we lost by death from "disease," in 1899, 15.30 men, and in 1900, 20.26, and in China we lost 23.62 men out of every 1,000, the rate being greater in China than in the Philippines, because the soldiers in China had been serving in the Philippines, and the fighting was much harder in China than in the Philippines, although in China the climate was "cool."

It is wholly untrue, and distressingly so, that the health of our soldiers was even nearly as "good" while serving in the Philippines and "serving within the limits of the United States."

Even insanity was much greater among our troops in the Philippines than at home or in Cuba.

These horrible health conditions and this increased insanity is shown to be in the main the result of climatic influences in the tropical climate of the Philippines (although it may be a "better climate" than in other tropics) by the following authorities, our own officers, from which I shall quote freely as follows:

Major Hoyt, as I have already stated, says:

That the white man can not successfully perform manual labor in this climate; that smallpox is prevalent everywhere, and in this latitude and longitude is very fatal, especially to whites.

Major Hoyt is a "practical sanitarian of ten years' experience." (Vol. I, Taft Commission Report, pp. 262, 263, 264.)

Major Mason, in reporting on conditions in the Philippine Islands, at page 234 of General Sternberg's last report, says:

I do not believe there is any such thing as acclimatization of white men in tropical climates, and that their health gradually deteriorates and they become less fit for active service. They are afflicted with boils, abscesses, leg ulcers, deafness, and suppuration of the middle ear, with perforation of the drumhead and buboes in the groin and axilla, without discoverable point of origin.

Colonel Greenleaf, at page 669 of the Surgeon-General's report for the last fiscal year, says:

That immature youths, the hard drinkers, and the recruits with inherited or acquired weakness of constitution have gradually, after repeated appearance on the sick report and running the gamut of several hospitals, been sent to the United States. Service in the Philippines shows on a grand scale the operation of the law of the survival of the fittest.

Seasoned soldiers of proper age, disciplined and intelligent enough to appreciate the primary rules of hygiene and moderate in their habits, remain. The proportion of sickness among such men as these would be surprisingly small but for two adverse factors.

The first is the inevitable undermining of the strength of the most robust by tropical service.

The most energetic and stalwart American, after a year of service here, loses energy, strength, and ambition. He performs what work his duty demands more or less half-heartedly and with a draft on his vital energy that he can actually feel at the time.

1,003 OUT OF 4,301 SOLDIERS SICK.

General Otis, in his report for 1899, printed in Manila, a small volume containing only his report, at pages 201 and 202, says of our soldiers:

The four regiments now present have an enlisted strength of 4,301. Of these 1,003 are sick and wounded, leaving an effective force of 3,098, which, after deducting necessary details for special duty, yields only 2,307 for the firing line, many of whom could not march 5 miles under the conditions which obtained from Malolos to this place.

He then states that the scorching sun and relaxing climate was "much harder to bear than the enemy's fire," leaving the soldiers but "little vital resistance for disease."

INSANITY AND MELANCHOLIA CURED, HOW?

Surgeon-General Sternberg and Colonel Girard, in charge of the hospital at Presidio, state that the increase of insanity among our soldiers was caused by the nervous depression and homesickness of our troops serving in the Philippine Islands, while Colonel Girard states that on the return of 180 patients to the United States, 46 had recovered and were dismissed.

Colonel Girard further states that in about all cases of melancholia the patient recovers "provided the patient is returned to the United States."

General Sternberg's testimony is found at page 173 of his last report, where he states that out of 273 cases of insanity, 149 were sent to the hospital at Washington and 124 returned to their duty after having been on the sick report for some time.

INSANITY CURED BY SENDING PATIENT HOME.

Colonel Girard's report is found at pages 122, 123, and 124 of the Surgeon-General's last report. He says:

During the year there have been 46 cases diagnosed as insane received at this hospital on which the diagnosis was not confirmed. It is probably true that most of these cases, if not all, were insane when they were transferred to this hospital, but a majority of them came from the Philippine Islands—

Now, how were they cured? Colonel Girard continues—

and the voyage home, together with the more cheerful surroundings, resulted in the disappearance of the abnormal mental condition.

Most of the cases were of the type of insanity in which the prognosis is good, and most of them were, without doubt, due to the nostalgia and the depressing influence of campaigning in the Tropics. Upon removal of these conditions the return to the normal mental condition was rapid and complete.

He further states that:

A large proportion of the cases had an hereditary taint, not discovered before enlistment, which, taken with the long distance from home, the intense heat of the tropical sun, constant harassment by the enemy who it is impossible to see, excessive use of alcoholics, and the depressing influence always present in a tropical climate will account for the changed mental condition.

The influence, just spoken of, without the hereditary predisposition, are enough to produce, in a highly nervous individual, mild or even severe forms of insanity.

He then states that the same rate of insanity exists under similar conditions in civil life as in the Army. But he overlooks the fact that when a soldier is selected, such a high standard is required

of him that he is practically nominated a "stalwart American," mentally and physically, before he can enter the Army, whereas among the masses in civil life no such standard as a mass obtains, and the rate of insanity under similar circumstances that surround the stalwart American in the Philippines should be much greater.

Colonel Girard states that sending the patient home in effect cures him, makes his insanity, otherwise permanent, only temporary, "which rapidly" disappears upon a change of conditions, and in melancholia, as a rule, the patient recovers "provided the patient is transferred to the United States."

SCHURMAN COMMISSION AND HEALTH IN MANILA.

The Schurman Commission, inquiring of Mr. William A. Dayland, an old resident of Manila, what the health conditions were in Manila and the outside provinces. said, or rather alluded to Manila as an indecent city so far as health was concerned. The testimony of the witness is found in Volume II, at page 172, of the Schurman Commission's report. The questions asked by the Commission and the answers are as follows:

Q. In general, what has been the result of your observations as to the healthfulness or unhealthfulness of those men who come here and take care of themselves, not in Manila, but in the decent provincial towns?
A. I consider the provincial towns more healthy than Manila.
Q. What would you say about Manila itself?
A. I think there is a great deal of luck about it. Only a year ago Mr. Spring came out here; he was a healthy man, but he seemed to go to the wall at once.
Q. When you say "luck," do you mean when a man is fortunate enough not to get infected with typhoid fever?
A. Yes.

The witness then spoke of drinking whisky as one of the prime causes of death, but the next cause was smallpox, dysentery, diphtheria, blood poisoning, epilepsy, typhoid fever. The white people in all tropical climates are directed by their physicians to drink more or less whisky, and so they do. The Filipino rarely ever drinks whisky. I never saw or heard of a drunken Filipino.

The judge of the recorder's court, Manila, Judge Liddell, whom I have known for a long time, said that during his long service as judge of this court he had never had arraigned before him a drunken Filipino, but we see of the prisoners of war that nearly one-fourth of them in the prisons at Manila were on the sick list. The white people, and particularly the men, drink whisky in the Philippines to revive their broken spirits, mental and physical.

The weary, worn, and lifeless condition that inevitably follows the white man in the tropical climates is more or less temporarily overcome by drinking some exhilarating beverage, and whisky is the one most used. This downward effect produced by the climate is opposed by the upward or exhilarating effect of the wine, and thus the two influences oppose each other until finally the health of the party, I may add, his constitution, is burnt out, and he becomes more or less an easy victim to disease.

THE TESTIMONY AS TO THE HEALTH OF MANILA BY TWO AMERICAN PHYSICIANS, DRS. FLECKER AND BARKER.

In this same report we find, at page 242, what Dr. Flecker, of the Pennsylvania University, who, with Dr. Barker, I believe, of Baltimore, were investigating health conditions in the Philippine Islands, says, in speaking of Manila:

Now, a word about cholera, which has been here, and, possibly, on account of communication with infected seaports, it might appear again. I think the plague might easily get here, and, if it did, I am of the opinion it would do a great deal of harm; that there might be more danger in Hongkong than in Manila.

Both Dr. Flecker and Dr. Barker agreed that there would be a "great field" at Manila anyway for these diseases.

The testimony of these two physicians is found in this report, on pages 241 to 242. At page 232 Dr. Flecker speaks of the inevitable and disastrous effects of bowel troubles on both the white and brown races in the Philippine Islands.

He also says that at the time of his testimony there were from 1,000 to 12,000 prisoners at Cavite the victims of beri beri; that 30 or 40 had died up to "last Friday"—3 deaths Saturday morning. He states that this disease has been thus far entirely confined to the natives. "The Europeans have not suffered, but on inquiry we find that it has appeared among the Europeans in times gone by; that some of the Spaniards had developed it, and that at one time it prevailed among the troops, showing that it is a disease that may attack Europeans, but less likely than the natives." He states that it paralyzes the arms and legs.

I may add, Mr. Chairman, that I saw several of just such cases, and sometimes the patient's body swells up and sometimes it dries up. Dr. Flecker states that persons under 40 are the ones usually attacked, that it usually attacks the natives, and "may assume alarming proportions."

Q. Are there any cases in Manila?
A. Among the natives; yes, sir. Those cases in the San Juan hospital are all from Manila.
Dr. FLEXNER (continuing). Perhaps, finally, I might say a word about leprosy. The disease is common in this locality. "How common in the entire archipelago we have been unable to discover." At this time there were 70 or 80 lepers at the San Rosario Hospital at Manila.

Dr. Flecker further states upon investigation that these cases of leprosy have "developed" almost without exception very near the immediate neighborhood of Manila. This is on page 235 of this report.

Dr. Flecker further stated that Europeans are subject to be attacked by leprosy and cited a case of a young white lady in South Carolina who had been traveling out of the United States. He stated that leprosy produced a condition of rotting away of the body.

Dr. Barker, at page 237, says:

There is very little danger from catching cold from sudden depression—less than in America—

He is speaking now of his observations, particularly in Manila—

On the other hand—

He says—

continuous heat is very trying and enervating, and will probably prove to be so on Americans. It interferes with the process of digestion, and unless one is particularly prudent in regard to food, the time and place of taking, etc., he is sure, sooner or later, to have an attack of stomach trouble. The climate, with other conditions, seems to affect Americans, especially with regard to their assimilation.

People who live here a long time become gradually pale. Of course, there are some exceptions—there are those who retain their vigor. I do not think the majority do. Women, especially, grow pale, and the European children which we have seen have a tendency to anæmia. Those who are familiar with the climate tell us that anæmia is one of the common complaints in the Philippines and in similar climates.

With regard to actual heat stroke, it is apparently uncommon, while heat prostration is relatively common. The continual heat undoubtedly predisposes one to diarrheal diseases.

On page 238 we find this:

Q. How about the effect of the sun? Tell us about that.
A. We have come to the conclusion that the custom, which is so general, of keeping indoors from 12 until 3, is very important. Some one has said that the sun is always dangerous, and I am inclined to think so. I have felt it very much.
Q. Isn't it bad from 9 to 12?
A. It is bad at any time, in all probability, but one feels it more after noon. It may be one has become worn out or exhausted by that time. In the morning, after a refreshing sleep, he is able to go about without feeling it so much.

On page 239 we find this:

Q. Do you think it possible for Americans to come here and live by pursuing the very simple rules that you have given?
A. For a term of years, yes, sir; provided they had frequent holidays away from this archipelago.
Q. Do you think the white race could work in the fields—pursue agricultural pursuits?
A. I doubt if that could be successfully done.
Q. Even the Americans living here, as you have said, for some years, would become pale unless he drank a good deal of whisky, wouldn't he?
A. I think it would depend on the individual constitution. I think a great many men would sicken; and if they tried it for two or three generations without replenishment from home, to use a slang expression, they would "peter out."
Q. And that, you say, is due to the climate?
A. Yes, sir; and the removal of home influences.
Q. How long have you been here?
A. Two months.
Q. In your personal experience have you found this climate trying?
A. Yes, sir; I have found that I had to be careful as regards diet and as regards work.
Q. You have done, perhaps, a good deal more work than the ordinary man?
A. I have kept quiet from 12 to 3. We have worked in the forenoon pretty hard, and at first in the afternoon, but we have found that the longer we stay here the less capable we are of work of a high order for any prolonged time.
Q. Do you find you perspire a great deal?
A. That depends on the drink and diet.
Q. Doesn't it depend on the exertion?
A. If you work out, of course you perspire.
Q. Is that desirable or not?
A. To a certain extent, yes. Excessive perspiration from excessive exertion would soon weaken one very much. We found, when working hard mentally, that exercise did not agree with us. I began with theories and ideas about taking exercise morning and night, but I could not stand it and do mental work at the same time.
Q. What effect is the rainy season going to have on health?
A. The probability is that dysentery will be much more common in the rainy than dry season. Malaria will be less, unless at the end of the rainy season there should be a great deal of hot, dry weather, making the water grow stagnant, and increasing mosquitoes, especially inasmuch as malaria is transmitted by mosquitoes.

On page 240 we find that it is admitted by the Commissioner, upon information, that "when a soldier gets sick he doesn't get well," about which Dr. Barker says:

Q. I understand that the proportion of sickness here is about 10 per cent. Is that excessive?
A. I do not think that we are supplied with any definite data as to the percentage of sick.
Q. Well, they have 2,300 sick people here—soldiers?
A. And how many in the army?
Q. I am counting about 23,000, making about 10 per cent. There is one thing I want to ask you about, if you have noticed it at all. We have been told here that when a soldier gets sick he don't get well. He don't seem to recuperate. If he once lies down and gives up, it takes months for him to get up again. Some, of course, attribute it to homesickness, which I know was a fact during the civil war. What do you think about that?
A. I think that certain diseases are especially prone to penanty and to slow convalescence. Of course, even with good treatment, convalescence is slow in this climate.

Dr. Barker further states that the predominant maladies among the soldiers is distress of digestion, including diarrhea and dysentery, then typhoid fever and perhaps malaria.

American Commerce.

SPEECH

OF

HON. CHARLES H. GROSVENOR,

OF OHIO,

IN THE HOUSE OF REPRESENTATIVES,

Monday, June 30, 1902,

On the conference report on the bill (H. R. 15108) making appropriations to supply deficiencies in the appropriations for the fiscal year ending June 30, 1902, and for prior years, and for other purposes.

Mr. GROSVENOR said:

Mr. SPEAKER: Incidentally to the commercial and financial history of our country there looms up to-day the great volume of facts which show what splendid progress we have made toward the ultimate subjection of the world's commerce to our interest.

I take the liberty to present in this connection, as a part of my remarks, one of the ablest papers that I have ever seen, showing the wealth of productive power and distributive efficiency of the United States. It is the product of the genius in statistics of Hon. O. P. Austin, Chief of the Bureau of Statistics of the Treasury Department.

EXPANSION OF AMERICAN COMMERCE, PAST, PRESENT, AND PROSPECTIVE.

[An address delivered before Manufacturers' Club of Philadelphia, May 19, 1902, by Hon. O. P. Austin, Chief of the Bureau of Statistics, Treasury Department.]

The growth in the foreign commerce of the United States has been a subject of interest and surprise to the whole world. Even our own people, familiar as they are with the wonderful resources which have produced that growth, pause in astonishment in the midst of the absorbing occupations of this strenuous age, and read again and again the figures which mark the marvelous growth of our commerce, and especially that of more recent years. For it is in the later years of our history that the most wonderful growth has come, a growth which has exceeded the greatest expectations of the most enthusiastic believer in our possibilities of production and manufacture and power to capture the markets of the world.

The year 1870 seems to have marked the beginning of a new order of things in the producing power of the country. With the opening of the transcontinental railway in 1869, and the construction of lateral lines which rapidly followed, the great producing sections of the interior were rapidly developed, and the power not only of production but of bringing together the natural products for manufacture and transportation to the seaboard gave new life and activity to the United States as a producing, manufacturing, and exporting nation.

For convenience of hearer as well as speaker the statistical statements which I shall present are given in round terms of "thousands," "millions," or "billions," and those desiring more exact statements to the last ton, bushel, or dollar will readily obtain them from the official publications upon which these general statements are based.

EXPORTS FIRST GAIN PERMANENT ASCENDANCY IN 1874.

Prior to 1870 we had almost constantly imported more than we exported. From 1790 to 1870 the imports exceeded the exports by nearly $2,000,000,000. In 1874 the exports began to exceed the imports, and have so continued in an almost unbroken record, and the excess of exports over imports from 1870 to 1902 is over $5,000,000,000. From 1790 to 1870 the exportations averaged $122,000,000 per annum; from 1870 to 1902 they averaged $833,000,000 per annum, and in the last two years the exports have aggregated more than in any full decade prior to 1870.

RAPID INCREASE IN PRODUCTION OF INDUSTRIAL FACTORS.

In the brief period since 1870 the production of corn has grown from 1,000,000,000 bushels to over 2,000,000,000 bushels per annum; of wheat, from 235,000,000 bushels to 535,000,000 bushels; of cotton, from about 3,000,000 bales to over 10,000,000 bales; the number of animals on farms, from 102,000,000 to 213,000,000, and the value of farm products, from $2,447,000,000 to $4,739,000,000. The production of petroleum increased from 220,000,000 gallons to 2,660,000,000 gallons; of coal, from 33,000,000 tons to 280,000,000 tons; of pig iron, from less than 2,000,000 tons to over 15,000,000 tons, and of steel, from less than 70,000 tons to over 13,000,000 tons. Meantime the railways of the country have grown from 52,000 miles to practically 200,000 miles, and rail transportation rates from Chicago to New York have fallen from 33 cents per bushel of wheat to 10 cents per bushel, and on other freights there were also large reductions.

INCREASED MONEY SUPPLY.

At the same time our mines of the precious metals have poured forth their treasures, and the money in circulation in the country has grown from $675,000,000 to $2,260,000,000, and from $17.50 per capita to $28.60 per capita. The effect of these conditions upon manufacturing has been phenomenal, electrifying.

PROSPERITY IN MANUFACTURING INDUSTRIES.

Manufacturing has meantime grown even more rapidly than agriculture. The number of persons engaged in manufacturing has increased from 2,000,000 to over 5,500,000; their earnings, from $775,000,000 to $2,735,000,000; the capital employed, from a little over $2,000,000,000 to about $10,000,000,000, and the value of manufactures produced, from $4,250,000,000 to $13,000,000,000. And all this, let it be remembered, has happened in a short thirty years, while the population was only increasing 100 per cent.

GROWTH IN FOREIGN COMMERCE.

What has been the effect upon our foreign commerce of all this enormous increase in production and manufacturing and the cheapening of the cost of production and transportation? The exports have increased from $9.77 per capita to $18.81 per capita in the same period. The exportation of agricultural products has increased from $233,000,000 to $943,000,000, and that of manufactures from $55,000,000 to $412,000,000. Europe has increased her purchases of our products from $302,000,000 to $1,122,000,000; North America, from $43,000,000 to $185,000,000; South America, from $14,000,000 to $44,000,000; Asia and Oceania, from $6,500,000 to $84,000,000; and darkest Africa, from $1,000,000 to $25,000,000.

RANK OF THE UNITED STATES AS AN EXPORTING NATION.

What has been the effect of these developments on our rank as an exporting nation? We have advanced from fourth place in the list of exporting nations to the head of the list. In 1870 England, Germany, and France exceeded the United States in their exports. To-day our exportation of domestic products exceeds that of any other nation in the world, and is advancing at a rate which gives assurance that we shall maintain this proud position as the world's greatest producer and exporter. In 1870 the domestic exports of the four great commercial nations of the world were: United Kingdom, $971,000,000; Germany, $552,000,000; France, $541,000,000; United States, $376,000,000.

In 1901 the figures of domestic exports stood: United States, $1,460,000,000; United Kingdom, $1,365,000,000; Germany, $1,113,000,000, and France, $804,000,000. Thus during that period France increased her exports of domestic products $263,000,000; the United Kingdom, $394,000,000; Germany, $561,000,000, and the United States $1,084,000,000, the increase by the United States being nearly as much as that of France, Germany, and the United Kingdom combined.

UNITED STATES LEADS IN PRODUCTION OF MAN'S CHIEF REQUIREMENTS.

The causes of this wonderful development are not difficult to find. The principal requirements of man can be enumerated upon the fingers of one hand, viz: Food, clothing, heat, light, and manufactures. Of all these the United States is the world's greatest producer.

The principal articles of food are breadstuffs and meats. For breadstuffs we produce more wheat than any other country in the world, and more corn than all the other countries of the world combined. For meat, the chief supply is beef and pork, and of each of these we produce more than any other country in the world.

For clothing, the quantity of cotton required by the world far exceeds that of any other material of dress, and of this the United States produces not only more than any other country, but over three-fourths of the world's entire supply. For heating, the chief requirement is coal, and of this we now produce more than any other country and at a cost far below that in any other coal-producing section. For lighting, petroleum is now the world's chief reliance, and we produce more of this article fit for use in lighting than any other country.

Of manufactures the United States is the world's largest producer. The chief requirements of manufacturing are iron, steel, copper, lead, aluminum, cotton, leather, and wood; and of all these we are the world's largest producer. As a result the United States easily leads the world both in the quantity and value of the manufactures produced, while the fact that we have more of the materials at hand than any other country, coupled with our cheap coal and ingenious machinery, gives us a great advantage in the cost of production. The value of the manufactures of the United States is now nearly double that of the United Kingdom, and about equal to those of Germany, France, and Russia combined.

Thus in the five great requirements of man—food, clothing, heat, light, and manufactures—the United States is the world's largest producer of their component factors.

But there are certain other great requirements which also have an important relationship to commerce, and they can be counted on the fingers of the other hand. They are invention, communication, transportation, finance, and energy.

GENIUS OF THE AMERICAN INVENTOR.

While our natural facilities, of which I have already spoken, are very great, it will be conceded that their value has been multiplied by the genius of the American inventor. It is to the American invention of the steam plow, the self-binder, the steam thresher, the cotton gin, and numerous other devices for performing by machinery what was formerly accomplished by hand labor, that our agriculturists have brought themselves to the foremost place in the world in the chief productions of agriculture. It was the American inventor who gave to the world the telegraph and the telephone, by which business possibilities have been multiplied beyond comprehension, and in the thousands of less notable inventions which enter into the daily requirements of production and manufacture and transportation the genius of the American inventor has enormously increased and will continue to increase our producing capacity and in greater degree than in any other country. The number of patents issued in the United States alone since 1870 is one-half as great as the number issued in all the rest of the world during that period, and the benefit which the American inventor and the American Patent Office has been to our production and commerce is beyond calculation.

OUR SUPERIOR FACILITIES OF COMMUNICATION.

Power of communication is another factor of equal importance in the world's commerce. Man may produce more food and clothing and heat and light and manufactures than all the rest of the world put together, but without the means of communication with his fellow-man his chances of disposing of his surplus are small. But in this power of intercommunication the United States leads the world. We have more miles of railway than all Europe put together, six times as many miles as any other country, and two-fifths of the mileage of the world. We have twice as many miles of telegraph as any other country of the world, and every city and factory of the country is within speaking distance of every continent and great trading center of the world. In the number of telephone messages sent the United States surpasses the total for all Europe combined. Of post-offices we have twice as many as any other country of the world, and the number of pieces of mail handled in the United States is greater than in all of continental Europe. Of newspapers, those great vehicles of communication and information, we have twice as many as any other country and more than one-third those of the entire world.

UNITED STATES FIRST IN TRANSPORTATION FACILITIES.

In transportation, that next great factor in commerce, the United States easily leads the world. In river and lake transportation by steam vessels our facilities are far greater than those of any other country, and the value of our Great Lakes in the transportation of the great products of the country contiguous to them can scarcely be realized. In railway lines we have, as already indicated, two-fifths of the mileage of the entire world, and more than all Europe put together, while our freight rates have been steadily lowered until they are now about one-third those of 1870, and are lower than in any other country in the world. Add to this the magnificent system of water and rail transportation of the interior, the fact that we have more coast line and more harbors than any other country, and a great ocean on either side to carry our commerce to the waiting world, and the value of this great factor of transportation will be appreciated.

FINANCIAL STRENGTH OF THE UNITED STATES.

In finance, another extremely important factor in the development and maintenance of production and commerce, the United States also leads the world. We produce more of the money metals than any other nation. There have been years in which Australia and South Africa have slightly exceeded the United States in gold production, and other years in which Mexico has slightly surpassed us in the production of silver, but in the combined production of gold and silver no country equals the United States. As a result of

this, and of our favorable balance of trade, the United States now has more gold and a greater total of money in circulation than any other country of the world. Experts also estimate that somewhat indefinite term "banking power" as being greater in the United States than in any other country, while their estimates of total national wealth also place the United States clearly at the head of the list of nations.

ENERGY OF THE AMERICAN CITIZEN.

The next and final feature which I shall mention in our claim to special advantages in production and commerce is that of energy. This is a product not easily measured in figures or terms; but when it is remembered that the population of the United States is formed by a combination of selected energy from the whole world, we may lay claim to a greater average supply of that important factor than any other country. The energy and determination which prompted the early settlers of America to leave their firesides and friends in Europe, and undergo the hardships and dangers of establishing homes for themselves in the New World, surely mark them as above the average in the supply of this characteristic. This is also true of a large share of the 20,000,000 of people who have come from other countries during the past century to establish themselves in the United States. Not only have they made valuable citizens and aided in the wonderful development which I have just outlined, but their intermingled blood flows in the veins of a large share of the present population, and carries with it an energy which, when guarded and vitalized by the work of our magnificent educational system, must tell for the future prosperity of the country.

FOUNDATIONS FOR FUTURE GROWTH OF AMERICAN INDUSTRIES.

These statements which I have made of our superior advantages in the production, manufacture, and transportation of the chief articles which man requires the world over, are not presented in a boastful spirit. My sole purpose in outlining these wonderful conditions is to show the solid foundation upon which our foreign commerce rests, and the assurance which we have that we shall maintain the proud position to which we have attained, and advance to still greater triumphs. The fields which render us the world's chief producer of breadstuffs are still fertile, and capable of enlargement and intensification of production; the plantations which make us the chief producer of the world's cotton can double their product, if desired; the supply of coal and oil for heating and lighting seems inexhaustible, and their area is being increased rather than diminished; the mines which supply the material for manufacturing show no signs of exhaustion; the transportation systems are increasing their carrying capacity, and by the addition of thousands of miles of railway each year are developing new areas, and the manufacturing sytems are steadily increasing their capacity until they can now produce far more than the present requirements of our population.

OUR FOREIGN COMMERCE WILL CONTINUE TO EXPAND.

The meaning of all this, it seems to me, is plain. It is that our foreign commerce is to continue to expand, and that we are not only to remain the world's greatest producer and exporter, but that the growth, unless checked by some unwise course at home or by unforeseen circumstances abroad, is to continue indefinitely. We hear threats of the exclusion of our products by certain countries, and rumors of European combinations against the United States; but neither past experiences nor the logic of the situation seems to justify the belief that this will be realized.

For years we have heard of legislation by European countries against American meats, yet our exports of provisions have steadily increased and were 50 per cent greater in 1901 than in 1890, and this year will be the largest in the history of our foreign commerce, and about 80 per cent of our provisions go to Europe. We hear from time to time that certain countries have made laws or rulings adverse to certain of our products, yet the total of our exports to those very countries continues to steadily increase. We have heard in recent years of the prospective boycott of American manufactures by European countries, yet more than one-half of our exports of manufactures last year went to Europe, the greatest manufacturing center of the world. A few years ago a dozen countries simultaneously protested against a pending tariff measure, yet that measure was enacted without reference to those protests; and to-day every one of those countries is taking more of our exports than they had ever done prior to that protest.

Sentiment does not rule in commerce. The question which the purchaser asks is not "Where was this article produced?" but "What is the price and quality?" If the price is lower and the quality better, he makes no objection to the legend, "Made in America," but rather welcomes it if he can rely upon it as an evidence of good faith in quality and price.

WORLD'S DEPENDENCE UPON UNITED STATES.

It is clear that the millions of purchasers all over the world, or even those of any particular country, are not likely to enter into combinations against American products or manufactures. But are the countries themselves likely to do so? Let us reflect for a moment as to what would be the result of such action. The United States produces one-fifth of the wheat of the world, one-half of the meats which enter into international commerce, about four-fifths of its corn, and three-fourths of its cotton. Of all these Europe must import large quantities. The importation of wheat into Europe from extra-European countries aggregates (including flour in terms of wheat) 265,000,000 bushels per annum, and of this, 150,000,000 bushels, or nearly three-fifths, is from the United States. Europe's importation of corn from other countries is about 200,000,000 bushels, and nearly all of this is from the United States.

EUROPE DOES NOT DESIRE TO EXCLUDE OUR PRODUCTS FROM HER MARKETS.

What would be the effect of a refusal by Europe to purchase our wheat, or our corn, or meat, or cotton? It would be the exclusion from the world's principal markets of three-fifths of its present importation of wheat, one-half of its importation of meats, three-fourths of its importation of cotton, and nearly all of its present importation of corn. What would be the effect of this exclusion of our supply of these articles? I do not mean to intimate that Europe could not exist without our wheat or corn or meats or cotton. But what would be the effect upon prices of the limited supply that other parts of the world could furnish? Imagine the effect upon the price of wheat if one-half the amount which enters into international commerce were wiped out of existence to-day. Imagine the effect of the elimination of three-fourths of the corn supply. Think what would be the effect on the price of cotton to-morrow if some vast conflagration to-night should destroy three-fourths of the visible supply of the world. Competition among producers and plentifulness of supply assure low prices, while the elimination of the principal competitor and largest producer would naturally and necessarily cause great advances in the price of the remaining supply of any of these articles.

PERMANENCY OF THE EUROPEAN MARKET FOR AMERICAN PRODUCTS.

We may therefore assume that at least in these great articles of general requirement there is no probability that we are to be excluded from the European market. Even in manufactures, of which Europe has been in the past the chief producer, our marvelous facilities for production are enabling us to compete in both quality and price. Our exports of manufactures have steadily grown from one hundred and eighty-three millions in 1895 to four hundred and twelve millions in 1901, and last year more than one-half of them went to Europe. During the brief period since 1895 we have heard much talk of European exclusion of our manufactures, but our exports of manufactures to Europe alone in 1901 were more than those to the entire world in 1895. Europe, it may be added, is our greatest customer in all classes of exports. In the fiscal year 1901, the latest and greatest in our export trade, Europe took over 50 per cent of our exports of manufactures, 90 per cent of those of agriculture, and 60 per cent of all other; or 76 per cent of the grand total of $1,487,764,991.

DISTRIBUTION OF AMERICAN COMMERCE BY GRAND DIVISIONS.

Taking the grand divisions, one by one, our export figures of last year are as follows: To Europe, $1,136,000,000, of which 19 per cent was manufactures; to North America, other than the United States, $196,000,000, of which 49 per cent was manufactures; to South America, $45,000,000, of which 60 per cent was manufactures; to Africa, $25,000,000, of which 40 per cent was manufactures; to Asia, $50,000,000, of which 66 per cent was manufactures, and to Oceania, $35,000,000, of which 80 per cent was manufactures. Comparing the exports to Europe alone with those of the remainder of the world as a whole, it may be said that the exports to Europe were $1,136,000,000, of which manufactures formed 19 per cent, and to the remainder of the world $351,000,000, of which manufactures formed 56 per cent. The total exports of manufactures were $412,000,000, and of this 52 per cent went to Europe and 48 per cent to other parts of the world. The total exports of products other than manufactures were $1,075,000,000, and of this 85 per cent went to Europe and 15 per cent to other parts of the world.

MANUFACTURERS MUST STUDY THEIR MARKETS.

What are we to conclude from all this? First, that the continent which takes one-half of our manufactures, even though it be a great manufacturing center, is a promising field for standard goods of high grades and reliable qualities, to be sold at small margins of profit; second, that the other parts of the world, which also take one-half of our manufactures, are a promising field for goods of special types, of qualities and forms varying with the customs and demands of the people in the section to be supplied. Each field needs careful attention in order to assure success—that of Europe because of the sharp competition which may be expected from local manufacturers; that of other countries because of the special requirements of local custom relative to color, size, form, and packing. The fashions of Central Africa or the South Sea Islands are as exacting as those of London or Paris, and the manufacturer must study the peculiarities in each field with equal care, even though the number of prospective customers in the former is less and the difficulties of establishing a permanent market greater than that among people whose requirements are similar to our own. In Europe and Canada we may expect to sell from the general stock of merchandise made for the great population of the United States; in Asia and Oceania and Africa and Spanish America the sales to the other than English-speaking population can most readily be expanded with goods specially prepared or selected, specially packed, specially offered, and sold on special terms.

SHARE OF THE UNITED STATES IN MARKETS OF THE WORLD.

This brings us to a consideration of the existing markets in the various countries, the share which we now supply in them, and the share for which we may still compete. The total imports of the European countries are over $8,000,000,000, of which we supply about 15 per cent; those of Asia and Oceania, $1,200,000,000, of which we supply about 10 per cent; those of South America, $375,000,000, of which we supply about 10 per cent; those of Africa, $430,000,000, of which we supply 5 per cent; and those of North America, other than the United States, $400,000,000, of which, by reason of proximity, we supply about 40 per cent. While a considerable share of the commerce of any country is a mere exchange with contiguous or adjacent countries, it may be assumed that as a rule fully one-half of the imports of these grand divisions is of a character for which we may compete, thus indicating that there are still great possibilities for the American producer and manufacturer in all parts of the consuming world, and that with patience, diligence, and fair dealing he may expect to make two blades of grass grow where now only one exists.

TROPICAL GOODS CAUSING STEADY INCREASE IN IMPORTS.

But before leaving this subject I want to call your attention to a feature of our import trade which has heretofore received little attention, and point out its important relation both to our home industries and the possibilities of new markets abroad. In the enthusiasm over our growing exports of the past few years we have given little attention to the growth of our imports. While it is true that our per capita of imports has been perceptibly reduced in the last thirty years, it is also true that the grand total of imports is slowly but steadily increasing.

You can count on the fingers of one hand the number of years in which the imports have been as much as $800,000,000, but in the fiscal year which ends with next month they will exceed $900,000,000, and at the present rate of progress bid fair to be a round billion in the near future. What does this mean? Why is it that with the splendid growth in the home production of nearly everything that man requires, and the wonderful development of our manufacturing industries, we are still increasing our imports? We produce, as I have shown you, a surplus of nearly everything required by man for his daily life, and we are the greatest manufacturing nation of the world. Why, then, do our imports continue to grow, despite the increased products of our fields, and forests, and mines, and factories?

The answer is simple. In one great class of products we have been in the past absolutely dependent on other countries. While it is true that we are the world's greatest producer of bread and meat and coal and iron and steel manufactures, we have been in the past entirely dependent upon other parts of the world for tropical products. And it is in these articles that the chief growth in our importations has occurred. Year by year the people consume increased quantities of tropical productions for food and drink. Our imports of sugar have grown from a little more than 1 billion pounds in 1870, to 4½ billions in the calendar year 1901; those of coffee, from 235,000,000 pounds to 1,073,000,000; tea, from 47,000,000 pounds to 63,000,000; cacao, from less than 4,000,000 pounds to over 50,000,000; rice, from 43,000,000 pounds to 139,000,000.

But more important than this is the fact that the great manufacturing interests of the country are making greater and greater demands upon the Tropics for their supplies of raw materials. The imports of fibers, chiefly tropical, which in 1870 amounted to less than 44,000 tons, were last calendar year over 256,000 tons; those of rubber have in the same time increased from less than 10,000,000 pounds to over 55,000,000 pounds; tobacco, from 6,000,000 pounds to 28,000,000; silk, from half a million pounds to over 12,000,000 pounds, and cotton, from less than 2,000,000 pounds to over 68,000,000 pounds.

The result is that the value of tropical and subtropical products imported has grown from $143,000,000 in 1870 to about $400,000,000 in the calendar year 1901, and the share which they form of our imports has grown from 31 per cent of the total in 1870 to 48 per cent of the total in 1901, and seems likely to form more than 50 per cent in the future. The total of our imports has doubled since 1870, but the imports of tropical and subtropical products have

practically trebled in the same time. The value of our imports classified as "manufacturers' materials" only a dozen years ago was $225,000,000 and amounted to 33 per cent of the total; in the year about to end the value of manufacturers' materials imported will be about $420,000,000, and will form more than 46 per cent of the grand total.

OUR GROWING DEPENDENCE ON THE TROPICS.

What does this mean? Clearly that we are increasing our dependence upon the Tropics.

What does it mean to the producers and manufacturers and exporters of *the country*? Clearly that they should seek to pay in the products of the field and factory for the increasing millions of tropical products which they import and must continue to import, and that in the great undeveloped markets of South America and Africa and Asia and Oceania, which supply these tropical products, we should seek to enlarge our sales and encourage mutual interchange of commodities.

What does it mean to this nation, which has recently extended its control over three great groups of tropical islands, with an area of 150,000 square miles, a population of 10,000,000 people, and an unmeasured possibility for the production of the very articles which we are now importing in increased quantities and must continue to import in greater quantities? Clearly that much of this great mass of the necessities of life and manufacture which we are now importing can be produced under the American flag, with American capital, and by American citizens.

Any one of these islands, Porto Rico, Hawaii, Guam, Tutuila, and the Philippine Islands, is capable of producing a part of the hemp, the jute, the coffee, the cacao, the tropical fruits, the sugar, the high-grade tobacco, and probably the silk and the tea and the india rubber for which we are now sending hundreds of millions of dollars to other countries. I would not see them take a dollar from the earnings of the American farmer, but until he can produce at home the sugar and high-grade tobacco and silk and rice for which we are now sending our millions abroad why should we not expend that money in our own islands, and in so doing build up in them a splendid market for our own products?

The Hawaiian Islands have increased their producing power more than twentyfold since we annexed them commercially by the reciprocity treaty of 1876, and have also increased their consumption of our products twentyfold. In the short three years since the actual annexation of those islands their production has enormously increased and our exports to them have more than trebled. In the four years since Porto Rico came under the American flag it has trebled its supply of tropical products in our markets and more than quadrupled its consumption of American goods. In the four short years since the American flag was hoisted at Manila our exports to the Philippine Islands have increased tenfold and those to all Asia and Oceania have doubled.

FUTURE OF OUR FOREIGN COMMERCE.

I conclude, then, that with a continuation of the vigor in production, the care in manufacturing, and the integrity in business dealings which have characterized our commercial history in the past we need have no fear for the future of our foreign commerce. There will undoubtedly be years, like the present one, in which the unexampled demands of the home market or the depression of that of other countries may temporarily check the growth in the exportation of manufactures, or the temporary failure of some great crop, like that of corn last year, may reduce the surplus of agricultural products which we can spare for our neighbors in other parts of the world. But these are mere incidents, temporary in their character, and not likely to seriously affect the steady forward movement in our export trade. Indeed, these incidents, when they do occur, serve rather to exemplify the great diversity of our productions and the possibilities of growth which that diversity supplies.

FEATURE OF HOME MARKET YET TO BE CAPTURED.

I have already spoken of our import trade and the fact that manufacturers' materials, chiefly of tropical growth, form a constantly increasing share of it. There is one other feature, however, of which I wish to speak briefly, and in which I wish to point out to you, the manufacturers of this great manufacturing center of the country, some possibilities in the home market which still await you.

There are four great groups of manufactures which stubbornly hold their own in the import trade despite the efforts of the manufacturers of the country to capture the home market. These four groups are manufactures of cotton, manufactures of fibers, manufactures of silk, and chemicals. It has seemed to me a strange, almost incredible fact, that the country which produces three-fourths of the cotton of the world and boasts of having the best manufacturing machinery, the most successful inventors, and the most ingenious and successful workmen, should be importing many million dollars' worth of cotton manufactures every year, and should actually have permitted that importation to increase year by year rather than diminish, as is the case with most classes of manufactures.

The value of the importation of cotton manufactures in 1891 was $28,000,000, and by 1901 it had grown to $40,000,000. The importation of manufactures of fibers, which in 1891 was $21,000,000, was $32,000,000 in 1901. The importations of manufactures of silk, which have averaged about $25,000,000 per year since 1895, seem likely to be over $30,000,000 in the present fiscal year. The importations of chemicals, drugs, and dyes, which have averaged about $45,000,000 per annum during the past decade, were $53,000,000 last year, and seem likely to exceed that sum by $3,000,000 or $4,000,000 in the present year. Add to these the $25,000,000 worth of manufactures of iron and steel which will be imported in the present year, the $10,000,000 worth of leather and its manufactures, and the $10,000,000 worth of chinaware, and we get an aggregate of $200,000,000 worth of the domestic market now being supplied by foreign manufacturers, and for which our own manufacturers may still compete.

I call your attention to these sole remaining opportunities of which the American manufacturer has not already taken advantage because of my perfect confidence in the ability of the American manufacturer and the American workman. The fact that they have since 1870 increased the importations of raw silk from half a million pounds to over 12,000,000 shows the magnificent work they have accomplished in supplying the home demand, and that it is only a question of time when they will take entire possession of the field. The fact that home manufacturers have increased their importations of fibers from 44,000 tons to 256,000 tons shows the progress they are making in capturing that important market, and that they will continue to make progress until the importation of manufactures in this line shall be reduced to a minimum. The fact that our cotton mills are now using four times the amount of American cotton and thirty times the amount of foreign cotton used in 1870 shows the progress which they are making, and that they will in time turn their attention to supplying the $40,000,000 worth of high-grade cotton goods, chiefly laces and embroideries, which foreign manufacturers still sell in the United States. The fact that the exportation of chemicals has grown from $6,000,000 a decade ago to over $14,000,000 last year shows that the manufacturers in that line will soon be able to claim for their own at least a larger share of the market in those lines than at present. The fact that the manufacturers have cut down the importations of iron and steel manufactures from $67,000,000 in 1862 to $17,000,000 last year, and that they increased the exports of iron and steel manufactures from $12,000,000 in 1880 to $117,000,000 in 1901, shows that it is but a matter of time when they will supply the remainder of the home market. And finally, the fact that the importations of manufactures have steadily fallen and the exportations of manufactures steadily increased until we are now constantly exporting more of manufactures than we import, gives me a complete assurance, a perfect confidence, that American manufacturers will not only capture this remaining $200,000,000 of the home market still available, but will go steadily forward in the work of capturing foreign markets. True, our imports must continue to grow, but that growth will be in the raw materials which the manufacturer must use, and in the tropical products which our own fields do not produce; and even these will soon be supplied, in large part at least, by the islands which have recently come under our control.

When these two things shall have been accomplished, when the American manufacturer shall supply the high-grade manufactures now imported, but which he will soon be able to produce, and when our new islands shall supply the tropical products which we must have, the United States will occupy the unique position of producing within her own boundaries all of the requirements of her own people and will continue to supply other nations from her growing surplus the natural products and manufactures which they demand and which they will continue to demand in increasing quantities.

OUR FAVORABLE TRADE BALANCE NOT A MENACE TO WORLD PROSPERITY.

I do not share in the fear which some have expressed that this condition, by which exports are to constantly exceed imports, is likely either to destroy our markets abroad or unsettle international finances. Certainly the experiences of the last thirty years do not sustain either of these theories. In that time, as I have told you, our exports have exceeded our imports by the enormous sum of $5,000,000,000. What has been the result? Has this constant excess of exportation, this persistent refusal of the people of the United States to expend in the markets of the world every dollar that they get in return for their exports, resulted disastrously in any way?

We have meantime been solemnly informed with reiteration that "if you don't buy you can't sell;" but nevertheless we have gone on selling at an increased rate every year, not only in those natural products which the world must have for food and clothing, but in manufactures, which we can now supply more cheaply and in better form than others, because of our great natural facilities of which I have already spoken. We have been informed that if we persisted in this ruinous course of refusing to redistribute to the world the money which we receive for our products we should so disturb the world's currency balances as to produce some awful financial cataclysm.

But has this happened? It is true that we have somewhat bettered our financial condition, that the amount of money in circulation in this country has been increased, and the amount per capita doubled. But is anybody among us complaining of that fact? Has the wonderful business activity which has existed over the entire business world during the past few years sustained the theory that the United States is destroying the prosperity of other countries by selling more than it buys? If the United States has really appropriated to itself an undue share of the world's money by selling $5,000,000,000 worth of merchandise in excess of its purchases from 1874 to 1901, how is it that the currency of the United Kingdom has increased from $10 per capita in 1873 to $17 per capita in 1900; that Germany has increased her currency from $13 per capita to $20 per capita in the same time; that Italy increased her per capita money from $5 to $10; that the money of Belgium increased from $14 per capita to $23 per capita; that of Netherlands from $16 to $26 per capita; Sweden from $3 to $10 per capita, and Australasia from $20 to $31 per capita, and that the other nations of the world have generally increased rather than decreased their circulating medium and their wealth meantime?

OUR PROSPERITY BENEFITS THE WORLD.

We have not been bringing into the country and storing away in our vaults the $5,000,000,000 represented by the excess of our exports during that time. We have been paying our debts abroad—at least a part of them; we have been sending our citizens all over the world to redistribute the money and get the value of it in new information, new ideas, new views of life, new experiences, and new health and vigor. We have been investing our money in the securities of other nations, and are beginning to make ourselves, in a very limited way, a creditor nation. And we have been distributing a part of this surplus in paying freights on our products carried in other people's vessels, a custom which I hope will soon terminate and be substituted by the sight of the American flag in all parts of the world, and the payment to American vessel owners of the large sums paid in the past to those of other countries.

We are not insisting, at least not many of us, that the men in our own nation or our own community who accumulate a competence by selling more than they buy shall redistribute that surplus by purchasing what they do not need. On the contrary, they are benefiting the community and the nation and the consuming world by utilizing that accumulated capital in enterprises which by their very magnitude decrease the cost of the articles which the people must consume, and at the same time increasing employment and the sums paid for that employment. And why should the world insist that we should terminate that system under which we are paying our debts abroad, making our people prosperous and our country the greatest of producing, manufacturing, and exporting nations?

Our foreign indebtedness still amounts to probably $2,000,000,000 and our national debt to one billion. Until we are able to pay this great sum of three billions of indebtedness and stand forth before the world as free men, as a nation absolutely free of obligations to other countries or to its own citizens; until we are able to take the rank to which we are entitled as a great creditor nation, supplying to the other countries the funds for which they are constantly seeking in the money markets of the world; until our sails shall whiten every sea and the millions of dollars which we are now paying to foreign shipowners pass to the hands of the owners of our own vessels, let us be content with the present order of things. Let us seek to increase rather than decrease the surplus of our exports; let us strengthen the hands of our producers and manufacturers, and in so doing strengthen those of the millions to whom they give employment; and if we are able to give to our neighbors in other countries the benefits of our industries at reduced cost of production but with fair margins of profit, our prosperity will be regretted by none, and we shall have benefited mankind as a whole by giving them our products at a low cost while we were benefiting our own producers and manufacturers and workmen and our whole people.

INCREASE IN THE WORLD'S MONEY AND ACTUAL WEALTH.

Those who fear that the prosperity of a single nation in the world's great family and a continued excess of exports over imports are likely to seriously unsettle the financial conditions and cash balances of the world do not, perhaps, sufficiently consider the enormous increase which has taken place in the world's money during the lifetime of the present generation. The world's gold production in the last four hundred years amounts to a little over $10,000,000,000, and one-half of that amount has been produced in the last forty years. The world's silver production in the last four hundred years has also been $11,500,000,000 in value, and practically one-half of that has been produced in the last forty years. In other words, it may be said that the quantity of

the precious metals now available for currency or as a basis for international currency is fully double that of forty years ago, and that the modern systems of finance, banking, and exchange, by which a scrap of paper passing by fast mail between continents, or a message by cable which passes in an instant, may represent a million or a score of millions, has many times multiplied the value of this greatly increased supply of currency for use in business transactions.

While the increase in gold and silver does not necessarily mean a like increase in actual wealth of the nation showing this increase of money, the statisticians of Europe show that the leading nations have greatly increased in wealth during the very time in which we have been selling them so much more than we were buying from them.

FUTURE OF AMERICAN COMMERCE.

What of the future? What is the promise of this magnificent country of ours, this land of plenty, where are now produced more of the requirements of life than in any other land, and which is to become a perfect unit through this addition of tropical territory, to give us the one class of materials in which we have been lacking in the past?

In my mind's eye I see a great, a wonderful development, far beyond that before which the world now stands in amazement. I see Niagara and countless smaller waterfalls furnishing electricity to be carried by wire to every city and hamlet and farm, to be used for light and heat and power, in manufacturing, and for transportation on rivers and canals and railways and roads. I see a great canal connecting the two oceans, and putting our eastern and western shores in close water communication and our great ports in direct touch with the markets of the whole world. I see another ship canal connecting the Great Lakes with the Atlantic, with ocean vessels landing at the docks of Cleveland and Chicago and Milwaukee and Duluth, and making that greatest producing section of the whole world a great ocean frontage. I see another canal connecting the lakes with the Mississippi River, and a great system of light-draft steamers and barges carrying the products of that great valley to the ocean steamship upon the lakes or the Gulf of Mexico, as convenience of location may determine. I see an American cable giving us facilities for instant communication with our islands of the Pacific and the Orient, and those islands supplying us with hundreds of millions of dollars' worth of their productions and taking hundreds of millions of dollars' worth of our products in exchange. I see the islands of the Gulf of Mexico one by one knocking at our doors and coming under the American flag and furnishing us through open doors their tropical products to mingle with those of the islands of the Pacific. I see a great railway line extending from Alaska at the north to Argentina at the south, connecting the railway systems of the two continents and bringing the great markets of that continent into close relation with our own. I see a steady growth of American influence and a development of closer commercial relations with our neighbors on the north and on the south. I see a magnificent fleet of steamships, controlled by American capital and genius, and many of them flying the American flag, penetrating every sea, carrying American goods to every continent and every clime, and sending them to the interior of every country by American engines, in American cars, and upon American rails. I see the product of the American farm and factory in every land throughout the civilized world, and with this accomplishment, increased prosperity for American producers and manufacturers, and increased happiness among all classes of American citizens.

Mr. Speaker, comparing the situation here graphically described with the horrors from 1893 to 1897, we have a complete exhibition of the difference between Democratic and Republican Administration.

I do not resort to the statistics of the Democratic period. Those conditions are burned into the very heart, brain, and soul of every man who lived in that time, and the conditions then existing ought to keep the Democratic party out of the confidence of the people for generations to come.

Bronze Equestrian Statue of Brigadier-General Count Casimir Pulaski.

SPEECH

OF

HON. ABRAHAM L. BRICK,

OF INDIANA,

IN THE HOUSE OF REPRESENTATIVES,

Thursday, June 26, 1902,

On the bill (S. 2295) temporarily to provide for the administration of the affairs of civil government in the Philippine Islands, and for other purposes.

Mr. BRICK said:

Mr. CHAIRMAN: One hundred and twenty-three years ago a great man died. He died as he had lived, a noble and undaunted warrior, fighting the battles of liberty and of the Republic. To-day his ashes mingle with the sea and soil of Georgia, but his soul keeps company with Washington and Lafayette in a land where death is but the opening door and strife no longer sounds in human turmoil.

I speak of Count Casimir Pulaski.

The debt we owe to our distinguished dead is a sacred memory that only ingratiated time can pay. Everywhere we are privileged to look into the pictured face of the benignant Washington and to gather inspiration of honor and greatness in the quickened memory of that mighty man. Everywhere we may see the lifelike features of Lafayette that seem to tell us ever and again the deathless story of a glory that is younger than years.

Here in this Pantheon city—the heart and home of a nation's pride and patriotism—the clouds are cleft by the noblest shaft in all the world, erected in the name of the one. Within the segment of its shadowy circle lies a gardened park of entwining vines and flowers, consecrated to the embronzed memory of the other. And by his side, the latest laureled tribute of a grateful people, stands the knightly Rochambeau in requited valor.

But where is their comrade, Pulaski?

Great and mighty as they were, his devotion was no less. They lived to enjoy the full fruition of freedom made possible through their heroism and his, but he died.

They survived to kindle the fires of liberty in a new republic—yes, more than that, to light a torch across the sea that gleams in Gallia's sky. But he fell—fell in the fire and smoke of battle, in the war-lit night that frowned in blackest thunder. He fell in the expiring gloom of the oldest republic, his native land, and in the agonizing birth pain of the youngest child, his adopted country.

They lived to see the sunshine, but Pulaski was no more.

Franklin wrote of him to Washington, "Count Pulaski is esteemed one of the greatest officers in Europe, renowned for his bravery everywhere." Yet he gave up love and youth and fame and fortune for a career of toil and danger in a strange land, for an almost hopeless cause in an unequal contest.

Though born in Poland, no loftier sentiment of American sympathy ever dwelt in deeds of heroic martyrdom than burned in him. He came and fought and died with a patriotism as pure and stainless as the fire that glows on the hearthstone.

It was the cause his father and all his kinsmen had died for; and from their sunken and silent graves in the bosom of a murdered nation emanated the spirit that impelled him to give up a life of splendid hope and growing fame for freedom and for us.

He was called here by no thought of spoil or desire of conquest; and in the resounding air no strident voice of vulgar conflict or war's mad revelry fell upon his listening ear. No; he came to us with that godly touched love of justice and the rights of human kind, bequeathed to him as the last sad legacy of a dying father in a dying land.

In the evolution of moral crises men grow great. They bud and blossom in the earth and air that evolve them. They are the children of environment. The heart is touched, it opens, and then becomes the home.

Pulaski was born a son of liberty. He was rocked in the cradle of troubled hope. His lullaby was the dread and dream-like music of a mighty drama—a drama of heartrending suspense and the gathering tumult of innumerable armies. It was a drama of unutterable leave-takings and eternal farewells. He was educated by fire and sword, by the tears and blood of a despairing and stricken people, by infinite outrage, by father's face and mother's voice, by holy rites and public patriotism; to live with his own people in free and liberated Poland, or, failing, to die for them that they might dwell in free-born homes beyond the sea.

In the irony of fate he died, and his glory is in his tomb.

The stellar vault that bends above is filled with gleaming stars of varying magnitude.

The once powerful kingdom of Poland, now blotted from the map of Europe, has set the jeweled firmament of heaven with many a gem of dazzling brilliancy that shines on Poland and on us.

Nicolas Copernicus, whose name is traced in star dust and written upon the "brow of the morning," was a Pole. Of all the world his brain refused to wear the confining crown of popular tradition. He believed in the iconoclasm of the real. He taught the world how to think. He loved truth. He lived an upright, useful life, and, dying, handed down to all time an immortal verity—"The earth is not the center of the universe; the earth moves round the sun."

Truth is a soldier; it everywhere meets resistance; it has forever had to break chains; it never won a battle by ease and acquiescence; it fights pride; it breaks down ancient custom, combats implacable hatreds born of wounded vanities; it is the most splendid warfare of the world; it is the war of one alone who is right against all; it is the grand war of intellect against blinded passion and prejudice; it shatters all the wooden images of immemorial stupidity; it conflicts malice with reason and conquers it with kindness. And this great Pole, who made enemies by his brain, who suffered the ridicule and contumely of mankind through the envy of offended ignorance and the malignity of a falsifying and ignoble pride, this man who had the audacity to think and to tell his thoughts, uttered a single, simple sentence, "The earth is not the center of the universe;" and in doing so reversed the entire world's process of reasoning.

With a single sentence he humbled the egotism of centuries and brought man face to face with a new proposition—intellectual truth. Before he came, man was the king of the solar system; when he died, that throne had crumbled into unremembered dust. If he had done nothing else but to teach the humble fact that self-complacency is the death of virtue and the grave of

progress, it would have been enough. But he did more. He was the father of modern thought. And as night came to the arrogance of egoism in his birth, so a spark issued from his grave to inspire the brain of a Kepler and a Galileo.

He was a countryman of Pulaski.

Empires may come and go, and many a dear name may float and fade away, but his name and the country and the people to whom he belongs will survive forever. He lived to forge the trumpet we are sounding to-day; he died leaving behind him an epitaph such as only great and good men aspire to:

I do not ask the pardon accorded to Paul;
I do not hope for the grace given to Peter;
I beg only the favor which You have granted to the thief on the cross.

What was this favor he so modestly craved?

And the thief said unto Jesus, "Remember me when thou comest into thy Kingdom." And Jesus answered, "Verily I say unto thee, to-day shalt thou be with me in Paradise."

And the azure of Slavonic skies still rises resplendent in the galaxy of other constellations that neither space nor years can dim. In the passing of Poland her sun went down in changing gold to rose and gray. But there is a glory of the sun, and then again, there is a glory of the moon and of the stars. Her political dominion has gone for a while; but the glory of the sun lingers through the twilight, into the glory of the moon and of the stars beyond.

I am unwilling to perform a cold-blooded analysis in the mournful tale of fair Poland, ravaged, pillaged, and denationalized—the darkest tragedy, the blackest chapter in the annals of human misery—unparalleled in crimsoned history.

Fair Poland fell, and Europe never shed a tear. She fell unwept by any generous friend or softening foe, but she will rise again; not in the martial noise of drums and trumpets, nor in the gilded caparisons and purpled panoplies of the camp. War is no longer king. No longer shall the warrior stand erect to hypnotize a million haggard hordes, who rush and follow him, to make the earth stop still in silent awe.

In the dim horizon of the "dream of things that were," the magnificent but awful vision of an ancient Commonwealth's annihilation has faded into the vague and indistinct outlines of Catherine's profile. She has gone to return no more, and her exile is eternity. But the banished heroes—Mickiewicz, Krasinski, Slowocki, Kosciuszko, and Pulaski—still live in splendid and triumphant majesty. They made adversity a virtue. They turned physical defeat into intellectual victory. They wear a crown of glory in the supreme prowess of the mind and heart. With the ermined robes of royal genius they have draped the shoulders of their native land in regal splendor.

In the miracle of man's endeavor it is not enough to think and feel. The brain must be nourished by the warm heart's blood. Still, it is not enough to think and love. In their wedded harmony man must work. But even that will not acquit beneath the rule of Him who directs the destiny of men and nations. The fairest child is born in human agony.

On the very day that Poland's prestige vanished into night it rose again in the boundless dawn of a new and brighter realm, a realm where the choicest flowers of Polish literature bloom on the grave of an olden glory. And from the solitude of that resting place, from the murmur of the growing grass, from the whispering silence of the faithful oak, and from the lonely requiem of the cypress and the yew comes the solemn protest of the dead, in the sad, sweet song of a patriot's love of country, of his pride in her pristine grandeur, his grief at her misfortunes, and far away above it all the evening star of his inextinguishable hope.

This is the realm that has restored and gilded her former luster. It is the empire of the brain; the republic of the heart. Mickiewicz, Krasinski, Slowocki, Kosciuszko, and Pulaski—poets and patriots—every one an exile.

Mickiewicz gave to Poland its stateliest measure of literary expression. He provoked the pride of the Poles in the intellectual achievements of their race. He stirred their enthusiasm into racial unity. He created the great national poem (Pan Tadeusz) Pan Thaddeus of Warsaw, which ranks among the proudest in the world of letters. It is the concrete sum of centuries of culture, and in its bosom throbs the pride, the hope, and consuming fire of the Polish people. Its lines are filled to overflowing with the pregnant utterance of ardent patriotism. He painted the sublime sweep of Lithuanian landscape. He walked the silent gloom of the primeval forest. He knew the brain and heart of the Polish people. He was a mourner at the tomb of all their hopes and fears, in its shadow he lived the life of all, and in his heart he bore the burdens of his race. There he stands, the central figure of the trefoil that have left to their native land the richest legacy of all its learned dead.

In the temple of fame on his left is Slowocki, and at his right stands Krasinski with the Psalm of Sorrow in his hand.

We need say no more: it is right to be silent in the presence of the gods. Let Slowocki speak for the triad:

Some time hereafter will my bones be whitened,
Somewhere in strangers' soil, I know not where.
I envy those whose dying hours are lightened,
Fanned by their native air:
But flowers of some strange land will spring and nod
Above my grave, O God.

Mr. Chairman, he spoke the word prophetic. Millions of his countrymen everywhere, on the mountain and in the valley, by the side of the rivers and the seas, beneath the clouds of gentle, soothing rain, and over all the heavens above, filled with the eternal sunshine of American freedom, in a strange land no longer strange, these sons and daughters of Slowocki dwell in happy homes, full of the flowers of joy, whose perfume shall forever fill the earth with the glory of these devoted martyrs.

As they ascended beyond the reach of human sorrow and of human criticism, they mingled with the agonies of their last hour an imploring appeal to the Parent of all mercies that He would remember with an ever-flowering blessing the people of their blood. And as they rose their mantle fell on worthy and distinguished shoulders.

Thirty years later Sienkiewicz sat self-crowned upon the throne made vacant when Mickiewicz had passed away. Clad in the royal purple mantle of their transcendant genius, he reigns the greatest creative mind in the field of glowing fiction at the close of the nineteenth century. His unfathomed soul has spent itself, of all the world that has lived and loved and suffered, in the rarest, richest treasure—the gems and flowers of thought.

Mr. Chairman, these are the people that have come to us. Their patriotism in the happiness of a new-found home that fills all the longings of a saddened heart is only measured by their sorrows and their greatness. Among the hosts of great and mighty men they have evolved, the name of Pulaski stands to America unrivaled in the solitude of glory.

The continually expanding, ever-growing map of our country—their country—as a living reminder of his noble character, bears the name of Count Pulaski over a score of times repeated. And in my own district his name honors town and county in the multiplied gratitude of our citizens.

Pulaski belongs to us. He was one of us. This was his adopted country, and he loved it with all the ardor of one whose enemies had killed his father, assassinated his country, enslaved his people, and drove them into exile; of one who had lived and suffered and felt, who had waited for the footsteps that did not come, and listened for a voice that is still; who had watched for the dawn of a day that never rose; whose heart had been swept by all the storms of fate, and on which had fallen all the nights of doubt, despair, and death, and from whose bosom flowed the stream of a wasted, ruined life, laden with all the spoils of a devastating war.

This was the Pulaski that came to Washington with Benjamin Franklin's admiring letter of introduction. He had won that magnificent compliment from the great American by his heroic and dashing courage, his towering military genius, his unshaken loyalty, his incorruptible honor, his indomitable love of country, his deeds of heroism through eight long and despairing years of bloody war in Poland—achievements that barely escaped the miraculous and almost challenged belief.

While a gleam of hope remained, he fought for Poland with relentless energy and brilliant resource. But the combined power of three mighty empires crushed a valiant people, and Poland fell. They drove him away, broken hearted, but not vanquished. He was the last to retire from the glorious contest.

Always superior to events, formidable in success, he was also great in defeat. To have rushed into confinement or death would have been a vain and foolish sacrifice. He chose rather to live to fight for liberty on the western shores of the Atlantic tide, to seek in the New World a land where kings were yet unborn, where freedom was a star, and thrones were still in elemental dust.

To-day over a million Poles cherish the fame of Pulaski in this country.

Mr. Chairman, the American character is strong chiefly because it is the amalgamation of a various progeny. We must have these mixtures to long endure. Destiny delights to mingle in the veins of American perpetuity the rejuvenating blood of many peoples.

Let us erect a statue to Pulaski that shall reincarnate in his immortal fame the love and patriotism of ten hundred thousand compatriots. Over a million souls will respond to the national anthem in the rapture of exultant citizenship when they hear that Pulaski's statue has taken its place among his comrades here on earth—Washington, Lafayette, Rochambeau, and von Steuben.

The Republic lives and must survive in the atmosphere of patriotism. The statue of a great and noble man is at once an example for his children and their hostage to the world.

The Republic's gratitude has had no frontiers; it has always

smiled on every exalted act. And in the sunshine of that smile the cradle of a million heroes has been rocked.

A monument is a crystallized inspiration.

A people are great and good in the memory, face, and figure of their greatest men. The proudest literature repeats their name. The highest art reveals their form and feature. Our most sacred conscience dwells in their commemorated character. Our sublimest ideal lives up there on top of a pedestal.

It is not only an honor to the soldier dead—an artistic sentiment, a hero worship—but it is more; it is a national virtue, a leaven to fealty, a consecrated duty that we owe to ourselves.

Every citizen of a republic should become familiar with its great men; they should every day look up into their faces and think. They may never read their biography, but they will stumble up against the statue. They may learn but little of ancient history, but in the public park they will know the man and absorb the inscription. It will give them a keynote, incite hope, raise their pride, quicken their instincts, arouse their ambition, and nudge loyalty to man and country.

Pulaski was a soldier in the best sense of the word. He fought to uphold and not to destroy. With a brain quick to receive and agile to execute, he brooked no opposition that he did not meet. He was unwearied in perseverance, and possessed a courage that was always ready but never rash. He had unbounded enthusiasm in the cause of national independence—marvelous intuition, unequaled magnanimity, and sleepless vigilance.

On August 19, 1779, he made this declaration:

I could not submit to stoop before the sovereigns of Europe, so I came to hazard all for the freedom of America; and desirous of passing the rest of my life in a country truly free, and before settling as a citizen to fight for liberty.

He sacrificed himself, all the years of his young life, his fortune, his ancestral dignity, his abounding spirit, his splendid genius and experience, and all his earthly hopes for liberty, justice, and humanity. For these he gave all he had—his martyred life.

The Continental Congress pledged its monumental duty to Count Pulaski by a resolution in 1779, while yet his deeds were young, but in the cumulating press of an enormous struggle it has never been redeemed. I hope we will wait no longer to wipe away the stain of a nation's forgetfulness.

Let us see that his memory survives his martyrdom.

It was while gallantly leading the combined forces of American and French cavalry at Savannah, Ga., that Pulaski met his death. "Pulaski's Legion" they were called.

They carried him from that field of awful carnage—carried him away beneath the flowing folds of a crimson banner consecrated by the tender hands and pathetic prayers of the sweet Moravian nuns of Bethlehem.

He was a valiant soldier fallen low; but that banner never left the sky till peace had wrapped it in a glorious victory. And as his fainting spirit fled he gave his last command to Harry Lee, "Follow my lancers."

Let us place him up on top of a granite pedestal—place him there where the shades of death have melted into the dawn that will shine upon him through all the glowing centuries, there where the Legions of Light will forever follow the lancers of liberty.

APPENDIX.

This statue was petitioned for, among others, as follows, all of them prominent and distinguished citizens of South Bend, Ind.:

The Hon. A. L. BRICK, M. C.:

Resolved by the Polish societies of South Bend, Ind., in joint meeting, through their various representatives, That we urge Congress, through our Representative, to provide for the erection of a statue to the memory of Count Pulaski, our great countryman and martyr for American liberty.

Civil Government for the Philippine Islands.

SPEECH

OF

HON. EDGAR D. CRUMPACKER,

OF INDIANA,

IN THE HOUSE OF REPRESENTATIVES,

Tuesday, June 24, 1902.

The House being in Committee of the Whole House on the state of the Union, and having under consideration the bill (S. 2295) temporarily to provide for the administration of the affairs of civil government in the Philippine Islands, and for other purposes—

Mr. CRUMPACKER said:

Mr. CHAIRMAN: This debate in many respects has been the most remarkable that I have heard in this Chamber during my experience as a member of the House of Representatives. It has assumed a very broad and comprehensive scope, and it has been characterized by a standard of ability that is exceptional, to say the least. I have listened attentively to the speeches made on the Democratic side of the House, with the view of locating, if possible, that which they have had so much to say about, namely, their policy of dealing with the Philippine question, but my labors in that direction have been in vain. They have no policy but that of obstruction; no method but that of fault-finding. They have taken facts that were essentially incidental and subordinate and exalted them out of their true relation with the great historical facts that have characterized and controlled the action of the Government in its attitude toward the Spanish islands.

They have attempted to give incidental questions a dominating place in shaping and defining the permanent policy of this Government toward the Philippine Archipelago. Their warfare has been somewhat like the warfare of the insurgents over across the sea; it has been characterized by the methods of the bushwhacker and the guerrilla. They have complained much about the water cure. This peculiar form of persecution seems to strike the average Democrat with especial horror. In heaven's name, what could be worse than the water cure? Mr. Chairman, the dominant facts connected with the acquisition and the control of the Philippines must not be lost sight of nor obscured by the clouds and fogs that hang about the mountain peaks of truth.

In the tide of our political life there is a mighty current that moves onward and onward with irresistible force, and on its surface are cross currents and eddies, and one who only sees these surface manifestations will never know the true philosophy of our political development. The gentleman from Mississippi [Mr. WILLIAMS] made a singularly able speech. I listened to him with deep interest, and according to my analysis of his exhaustive presentation of the Democratic side of this question, I am led to the conclusion that the issue is reduced to this one proposition:

Are the people of the Philippine Islands capable of maintaining independent self-government—not according to the American standard, but are they capable of maintaining a respectable order of independent self-government? If I believed that the inhabitants of those far-away islands were a "people" in the sense that the inhabitants of Cuba are a people; that they were as competent to look after their own interests, as competent to manage and maintain a government of their own selection, and if I believed further that it was the general desire of the people of that archipelago to have a government of their own creation, an independent republican government, I would say with him, let them go in peace. Mr. Chairman, if I believed the only title of the United States to the Philippine Archipelago rested upon a contract of purchase from a despotism that had controlled and misgoverned those people for more than three hundred years; if I believed the only right of the United States rested upon its title of purchase, I

would not stand upon the floor of this House and defend it for a single moment.

But I am one of those who believe that a government as well as an individual may incur responsibilities, moral as well as legal, and that it no more becomes this Republic than it does an individual to shirk responsibilities that justly come to it in the course of its life and dealings with other sovereignties.

During the course of this debate I was much impressed by an extract that was read from a letter of instruction of President McKinley to the American commissioners during the negotiation of the treaty of Paris, in which he said that considerations of commerce, considerations of a material character, might easily be disposed of, but that considerations of duty and humanity were involved which could not be treated so lightly. If I can not demonstrate to this committee that the inhabitants of those islands are not capable of self-government, and that our Army and Navy destroyed the only government that gave them any protection, and in a moral sense we succeeded to that duty and responsibility, I shall feel that I have failed in the purpose of my speech.

Let us look for a moment at the situation of the Philippines shortly before the Spanish war. There had been a systematic condition of oppression and tyranny, a condition of unjust exaction and arbitrary imposition that ground down the lives and stifled the hopes of the people for generations. While I do not believe that the inhabitants of the archipelago constitute a "people" in the technical sense, while I do not believe that public opinion exists there in the sense that public opinion is necessary for the foundation and motive of self-government, I do believe that there was a concurrence of opinion among all of the various tribes and peoples that their common welfare depended upon their ability to rid themselves of the system of Castilian cruelty and oppression that had preyed upon their lives and robbed them of their substance for three centuries.

In the year 1896 intelligent citizens of the islands formed the celebrated political society known as the Katipunan, a secret, oath-bound society, and early in that year a deputation of its organizers were sent to the Mikado of Japan with a petition, signed by over 5,000 of its most influential members, asking the Mikado to annex the archipelago to the Empire of Japan. Were they thinking about independent self-government then? Was it the judgment then of the leaders and promoters of that patriotic political society that the inhabitants of the islands were fit for independence—that they were capable of maintaining independent self-government? In that petition they said nothing about independence; but their first and only desire was to rid themselves of a despotism that had made progress practically an impossibility. The Mikado of Japan sent that petition with the 5,000 names attached to it to the Spanish Government, and, armed with the knowledge that the petition imparted, the Spanish authorities set on foot a most irritating system of espionage, personal and collective, with a view of stifling the spirit of liberty in the inhabitants, and the result was the insurrection of 1896, which broke out in the autumn of that year.

During the few months following, Aguinaldo, who was a native school teacher, then only 27 years of age, allied himself with the movement in opposition to the Spanish power, and first came into prominence. My estimate of this man is that he is a man of force and determination, a colossal egotist, a consummate demagogue, a constitutional agitator. That is a fair analysis of his character. He allied himself with his people; he was a member of the Katipunan, and in that struggle he became the leader of the insurgents. During that contest the tide of battle went against the struggling Filipinos. One Spanish victory followed another until the small remnant of insurgents in the field was driven into the mountains. At this juncture Pedro A. Paterno, a representative of the Spanish Government, was authorized by the commanding general, Rivera, to negotiate terms of peace, if possible, with the insurrectos, and the memorable peace of Biac-na-Bato was concluded.

Under the terms of that treaty Spain promised certain reforms, and agreed to pay the leaders of the insurrection a considerable sum of money for the purpose of indemnifying their families for losses growing out of the war, and the insurgents were to cease their warfare, and 24 of their leaders, including Aguinaldo, were to leave the archipelago and remain in banishment. They went to Hongkong, where they employed their time and energies in conspiring against Spanish authority.

The treaty of Biac-na-Bato was signed on the 14th day of December, 1897, and after that peace was concluded—there was no longer insurrection, rebellion, or warfare in the archipelago.

During the progress of the insurrection in July, 1897, the insurgents issued a manifesto and circulated it generally throughout the islands, which set forth their grievances against the Spanish Government, and what they aimed to accomplish in the way of reforms. It contained five distinct propositions which they expected to force Spain to accede to, but the manifesto made no mention of independent self-government. I will read the propositions:

(1) Expulsion of the friars and restitution to the townships of lands which the friars have appropriated, dividing the incumbencies held by them as well as the episcopal sees equally between peninsular and insular secular priests.

(2) Spain must concede to us, as she has to Cuba, parliamentary representation, freedom of the press, toleration of all religious sects, laws common with hers, and administrative and economic autonomy.

(3) Equality in treatment and pay between peninsular and insular civil servants.

(4) Restitution of all lands appropriated by the friars to the townships, or to the original owners, or in default of finding such owners, the state is to put them up to public auction in small lots of a value within the reach of all and payable within four years, the same as the present State lands.

(5) Abolition of the Government authorities' power to banish citizens, as well as all unjust measures against Filipinos; legal equality for all persons, whether peninsular or insular, under the civil as well as the penal code.

These several reforms they demanded of the Spanish Government were simple administrative reforms. The American Government has already established and by the pending bill proposes to enlarge governmental reforms which will more than meet every proposition in the manifesto; reforms that carry to the lives and homes of the people liberties and privileges more than they have ever before enjoyed and more than they ever even demanded from Spain.

But that rebellion ceased with the peace of Biasuabato, December 14, 1897. Our war with Spain came on, and Admiral Dewey vanquished the Spanish squadron in Manila Harbor, and immediately after that historic event Aguinaldo and a number of his associates claimed, and perhaps justly, that the Spanish Government had not kept the treaty of peace; that the promised reforms had not been inaugurated nor the indemnity paid, and they saw the power of Spain broken and destroyed so they hastened to Luzon and reorganized the old insurrectionary army to take advantage of Spain's helplessness; that this was done with the knowledge and consent of Admiral Dewey and Americans in authority in the Philippines is conceded.

They furnished Aguinaldo arms and ammunition, and it was legitimate warfare to do so. Much has been said, Mr. Chairman, about a supposed alliance between the American authorities and Aguinaldo at this time. There was no alliance in the technical sense. There was cooperation. There is no question that the American authorities welcomed the insurgent forces to assist in destroying the power of Spain. Aguinaldo took advantage of the situation to advance the ends of his own ambition. When he saw that the power of Spain was overthrown and could never be reestablished, he first conceived the idea of an independent government under his own domination and control. He did not believe this Government would annex and attempt to permanently govern the islands, and here was his opportunity, and he organized an army of 30,000 insurgents to reduce it to a reality. There was no promise of independence to him or his followers, but he sedulously and insinuatingly spread that impression among his followers for the purpose of holding them together. He early declared himself dictator of the archipelago. He was prompted in that move by a desire to secure liberty and good government for the people.

Mr. HILL. Will the gentleman allow me a moment to confirm that? When I visited Guam, I met Mabina, his secretary of state; and when I made known to him for the first time that Aguinaldo had been captured, he said, "I am glad of it. Now we will have peace."

Mr. CRUMPACKER. I thank the gentleman for that contribution; it is an important item of evidence. As I have just asserted, Aguinaldo was serving his own selfish ends when he proclaimed himself dictator, and his hope was for loot and power. The history of the Spanish war is familiar to all of us. When the protocol was signed and hostilities ceased, the disposition of the Philippine Islands was the question that overshadowed all others. It was fraught with grave consequences and demanded the most serious consideration, the most careful thought that could be given it.

In the meantime the solicitude of Aguinaldo appears to have become more earnest and intense, and his ambition became more exalted. He very carefully and craftily spread abroad the notion that the American authorities had promised the Filipinos independence, in consideration of their cooperation against the Spanish. An appeal of that character to the pride of the race and its national spirit was not without force, even with those people. The arrangement was said to have been in secret, and it could only be communicated in confidential whisperings. We know and he knew there was no foundation for it whatever, but he resorted to the subterfuge for the purpose of exciting the hopes and expectations of his deluded followers in order to strengthen his influence over them.

It was his aim to forestall action looking to a different conclusion on the part of our peace commissioners at Paris.

When our commissioners met at Paris, they were confronted with the grave problem, What should be done with the Philippines? There was no difficulty about the disposition of Cuba; that had been settled by the protocol. There was no trouble about what should be done with Porto Rico, but the ingenuity and conscience of the great men directing the affairs of the nation were brought into full play over the destiny of the Pacific islands. It was a serious question indeed. Annexation meant new and perplexing problems of government, new phases of national life, new opportunities, and new responsibilities.

I have no doubt that, if the representatives of the American Government at Paris could have been satisfied that the people of the Philippine Islands were capable of maintaining a decent and responsible order of self-government, the archipelago would have been put in the same category as Cuba. That was the crucial question, and it was discussed and considered in all its aspects, and the conclusion was that turning the islands back to Spain would not be tolerated by the American people; self-government meant chaos, anarchy, destruction; so the only policy left was annexation in the hope and with the expectation that this Government would control and manage their affairs until the time should come when those people would be capable of independent political life.

Were we not responsible for their helpless condition? Had we not destroyed the power of Spain? Had we not deprived them of the only government they had had for more than three hundred years? Oppressive though it may have been, it had vouchsafed a certain degree of domestic security and international protection. None was left. Could we honorably withdraw our authority and leave those hapless people to a fate that meant war, bloodshed, and devastation, with no hope of redemption? The Commissioners at Paris said no, and the treaty of annexation was brought here and discussed in the Senate, when all these questions were again considered, and the Senate said no—annexation is the only honorable policy for this country, and the treaty was ratified. And when that treaty was ratified, the authority and the responsibility of the United States for the government of the Philippine Archipelago became finally established.

It then became the constitutional duty of the President to assert American sovereignty there. As was said by my colleague [Mr. LANDIS] to-day, in his most eloquent and patriotic speech, if the President had refused to extend American authority over the islands he would have been subject to impeachment. He had no choice but to enforce the provisions of the treaty. There is no use of talking about the pendency of the Bacon resolution. The Bacon resolution had not passed, but if it had passed, it would not have altered the constitutional aspect of the situation a particle, because when the treaty was negotiated and ratified, it became the supreme law of the land, and could only be repealed or modified by a public act by both Houses of Congress, approved by the President, and the Bacon resolution only purported to declare the intention of Senators in supporting the treaty. It could not repeal or modify the treaty. What significance, then, could the Bacon resolution have had? But gentlemen are now making it the poor pretext for their action then, under the claim that they were for the treaty with the expectation that the resolution would also be adopted. This is a flimsy subterfuge indeed; they are shielding themselves behind a most vulnerable defense work indeed. The Bacon resolution will not save the bacon of that class of statesmen now. [Laughter.]

When that treaty was ratified, every man in the land knew what it meant. Mr. Bryan was one of its chief advocates and promoters, and he knew full well its broad and important significance. He knew that it cast upon the President the responsibility of extending American sovereignty throughout the archipelago by force if resistance should be offered.

The treaty was adopted and the Administration began its work of pacification. What has been the result of that policy? In the brief time allotted to me I can not begin to recount the splendid work that has been done in the way of establishing civil government, law, and order. The first thing was to pacify the islands, to subdue the insurrection, and that required the employment of the Army and the Navy. The methods of the Army have been attacked with furious energy. Gentlemen have selected occasional acts of cruelty committed under great provocation and sought to make them characterize the policy of the entire Army.

It is an easy thing to criticise the military or civil administration of any government. Human nature is not perfect in its best estate, and under the most favorable conditions excesses will be committed, unjustifiable acts will occur. Who are the men that compose the American army in the Philippine Islands? They are American citizens, born and reared in American homes; they are our sons and brothers; they are men who have patriotism enough to forsake the safety and comfort of home and civilization and go 10,000 miles away, under the intolerable heat of a tropical sun, and risk their lives for the maintenance of American sovereignty in territory over which that sovereignty rightfully extends. They are made of the same stuff that other American citizens are made of; they carry with them into the Orient the same sense of justice and right that characterizes American life, and at the same time they carry with them the same weaknesses, the same feelings that belong to citizenship at home.

Cruelties unknown to civilized warfare had been perpetrated by the insurrectionary forces against our soldiers and against natives who were friendly to the American Government. Men wearing the uniform of our Army were buried alive, were assassinated and their bodies mutilated in a manner too horrible to describe, and in some instances they were burned to death by the awful torture of a slow fire. The American soldier admires a manly foe who will stand up in the open and fight to an issue a bloody contest. He is willing to take his chances with his adversary and will accord honorable and just treatment under all circumstances, but in the Philippines the war has been of no such character. The enemy has in no instance made an organized and determined fight. Their mode of warfare has been predatory; has been conducted by guerrillas, bushwhackers, murderers, assassins, and robbers. It is impossible to distinguish between the insurrectos in their guerrilla warfare and the ladrones who infest the forests and the mountains and make raids upon unprotected detachments of soldiers and upon peaceable communities for murder and pillage. When the life of one of our soldiers is taken by a band of assassins who get his confidence by treachery and fraud, the indignation of every soldier in the Army is aroused and the first impulse is to avenge the death of the comrade upon the race that is responsible for the outrage. This is the law of reprisal; and it is resorted to, when conditions justify it, by all the peoples of the earth.

Gentlemen on the other side of the Chamber admit the necessity for the use of the Army in restoring law and order in the new territory, but they try to smirch not only the Army, but the Administration at Washington on account of alleged irregularities and to impeach the whole Philippine policy in the bargain. Their conclusions are incorrect, their logic is lame, and their hopes are built upon the sand. If wrongs have been committed, shall we abandon our purpose of pacification? When Neely plundered the public funds in Cuba did we gather up our trappings and flee the island in consternation? No; we removed him from office, went on with increased vigilance, and completed our splendid mission by adding another republic to the family of nations, while Neely is paying the penalty of his crime in a Cuban prison. If wrongs are done in the Philippines, we should punish the perpetrators, increase our vigilance, and continue our glorious work of political evangelization.

But who is responsible for the wrongs complained of? Why, only the men who perpetrated them. The fact that they have occurred is no argument against our policy in the Philippines, but is only illustrative of what men will do under great provocation when they have the power.

Investigations are on foot, courts-martial have been instituted, and the evils that have existed in the Army are being speedily corrected. While we sincerely regret that anything should have occurred that will cast a shadow upon the splendid record our brave soldiers have made in the Philippines, I must express my astonishment at their moderation. The wonder is that greater scandals, both in the military and civil administration of those islands, have not arisen. It took England more than a hundred years to learn how to govern her tropical colonies. We are utterly without experience in that line, and if we shall escape with the comparatively few instances of oppression and dishonesty that have characterized our conduct so far, we shall have made a splendid record indeed.

No war in any country was ever conducted that was not accompanied with instances of cruelty and oppression, and the probabilities are that none ever will be. When the time comes that soldiers in the field—away from the restraints of civilized life and in the presence of blood and power—can have such perfect self-control that they will conduct themselves with circumspection in the face of provocation, the millennium will be at hand and wars will be no more.

The army in the Philippines should be judged as a whole, and when so taken there will be found to be such an overwhelming preponderance of virtue, patriotism, self-restraint, and magnanimity that it will command the hearty approval of every citizen. [Applause on the Republican side.]

The Taft Commission went into the archipelago and began its work of establishing civil government—began to make laws. It repealed the old cumbersome, dilatory, and corrupt system of the administration of justice, and established in its place a modern,

simple, and inexpensive system of administration and procedure that might be profitably adopted in many of the States.

Mr. BARTLETT. Will the gentleman allow a question?

Mr. CRUMPACKER. Yes, sir.

Mr. BARTLETT. As the gentleman's time is limited, I would not interrupt him if it is not agreeable. In reference to the treaty, the gentleman stated, as I understood, that, being ratified, it meant that those islands were permanently to be a part of the United States. Now, does the gentleman think that the McEnery resolution passed a few days after the ratification of the treaty indicated in any way the intention of a majority of the Senate at that time as to what they expected to do with those islands?

Mr. CRUMPACKER. No, I do not think the intention and purpose of the Senate or a majority of the Senators could have been expressed effectively in any way except by an amendment to the treaty or in the form of a public act. It is a matter of no importance what individual Senators might have done in caucus or otherwise. A resolution adopted by the Senate alone could have no constitutional or legal significance.

Mr. BARTLETT. I was not asking with reference to the legal aspect of the question. I am fully aware that the Supreme Court passed upon the legal aspect of that resolution. I merely wanted to know whether the gentleman thought that resolution was indicative of the intention of a majority of the Senate at that time as to what should be done with the Philippine Islands in the future.

Mr. CRUMPACKER. I do not think it is a matter of any particular consequence.

Now, to proceed, the Taft Commission has established civil government in the Christian provinces of the archipelago. Even Samar, which, according to the assertions of the opposition, has been reduced to ashes and turned into a howling wilderness, has been provided with a civil government. There were citizens and institutions enough left in that province to organize into a government. The provincial governments are composed of a governor, elected by the people, and a treasurer and supervisor appointed by the Commission. These officers constitute the provincial board, and constitute the governing authority in the provinces.

The provincial government levies and collects taxes, enforces law, preserves peace, and deals with questions of a general provincial character. Each province is subdivided into municipalities called pueblos, corresponding to counties or townships in this country. The governing officers are a president and councilors from 8 to 18 in number, depending upon the population, and their functions are similar to those of the mayor and councilmen in American cities.

Pueblos are subdivided into barrios, or wards, and each ward is represented in the municipal council. The president and councilors are elected by those who have been intrusted with the right of suffrage. The electorate is composed of males 23 years of age and over who have resided in their respective municipalities for six months and who own real estate of the value of 500 pesos or pay taxes annually of 30 pesos, or who held certain municipal offices under the Spanish administration, or who can read and write the English or the Spanish language. About 15 per cent of the males of voting age are able to qualify under these limitations. The municipal councilors chosen by this electorate in the several pueblos of each province meet once every two years and elect the provincial governor.

It is an admirable adaptation of the American system to local conditions, and a complete system of civil government is now in successful operation in most parts of the archipelago. The government is pyramidal, with municipalities as the base and the Commission as the apex, so interlocked as to form a harmonious system. The municipalities levy and collect their own taxes, make local improvements, and, in a large measure, manage their own affairs. The people are enjoying a greater share in their own government to-day than they ever did before in all their existence.

In addition to this, the Commission has established a civil code, and the method of procedure has been simplified and cheapened so that controversies between litigants may be determined with promptness and satisfaction. Schools have been established in all parts of the archipelago, a system of road building and internal improvement has been set on foot, sanitary measures have been inaugurated, bureaus have been created for the purpose of administration and instruction, and much progress has been made in establishing institutions on a permanent footing.

Mr. WILLIAM W. KITCHIN. Will the gentleman allow a question?

Mr. CRUMPACKER. Yes, sir.

Mr. WILLIAM W. KITCHIN. Has the gentleman any information as to how many of these officials in those municipalities are natives?

Mr. CRUMPACKER. Most of the officials in the municipalities are natives—practically all of them are natives.

Mr. WILLIAM W. KITCHIN. Does not that indicate a capability for self-government?

Mr. CRUMPACKER. For limited self-government, it does.

Mr. WILLIAM W. KITCHIN. Mr. Chairman, I understood the gentleman to say that if he were satisfied that the Filipinos are capable of maintaining self-government, unaided by the United States, he would favor their national independence.

Mr. CRUMPACKER. I did make that statement and that is my position, but after a thorough investigation of the question I am convinced that they are not fitted for independent self-government. Because they are capable of maintaining municipal and provincial autonomy under the supervision of the Philippine Commission, it does not follow that the archipelago as a whole is capable of maintaining independent self-government—of protecting life and property in all the islands and discharging the high and solemn responsibilities that would rest upon it as a sovereign unit in the family of nations.

Mr. HAMILTON. Mr. Chairman, I would like to suggest to my friend that the law under which these municipalities are carried on was framed by the Taft Commission.

Mr. CRUMPACKER. Yes, and all their municipal operations are under safe limitations. Now, in relation to the question of self-government, the opinions of this distinguished gentleman and that have been cited for and against it, but a little reflection upon the primary conditions existing there will determine the matter. We know what fundamental conditions are necessary to independent self-government, and we know that those conditions do not exist in the Philippines. The three distinct races of people are divided into upward of eighty different tribes, separated from each other by natural barriers of water and mountains. They have eight or ten different languages or dialects, and many of the tribes are utterly unable to communicate with the others. They have no common language, no common literature, and no means of intercommunication. Each tribe or province has its own peculiar social order, its own customs and traditions. There is no bond of unity among the tribes, no homogeneity, and no such national unity as is necessary upon which to build a national government. Each province may be able to govern itself under proper supervision, but there can be no fusion among the tribes under existing conditions, and, therefore, no national government.

Mr. LITTLEFIELD. What proportion of those people maintain tribal relations practically of a savage or barbarous state?

Mr. CRUMPACKER. About two millions and a half.

Mr. WILLIAM W. KITCHIN. What is the population of those communities that have this local self-government under the Taft Commission?

Mr. CRUMPACKER. About six millions and a half. There are a million and a half of Moros and about a million of the hill tribes, the pagan Filipinos, who are neither Mohammedans nor Christians, and they are scattered about in all the islands. Now, in order that there may be independent self-government, there must be something like national unity, there must be homogeneity, and that is impossible without a common language and a common literature. There must be closer contact between the people of the several provinces and a stronger bond of sympathy, and this will require years for its proper development.

Mr. LITTLEFIELD. In addition to that, is there not a deep-seated enmity between these various tribes, the inhabitants of various islands?

Mr. CRUMPACKER. Naturally so; and it will require time and toil to remove it. We must construct railroads, highways, telegraph lines, and telephone lines to bring the provinces into closer contact, and establish schools, and as a result of those agencies a common language will necessarily be developed, the inhabitants will become welded into one people, and there will be political solidarity. This must be accomplished before independent self-government is to be thought of.

Mr. McDERMOTT. Mr. Chairman, will the gentleman yield?

The CHAIRMAN. Does the gentleman yield?

Mr. CRUMPACKER. I do for a question.

Mr. McDERMOTT. I notice in the second section, I think it is, of this bill that the right of suffrage is taken from those tribes that are anti-Christian. Is there any provision in the bill to cover the case if one of the tribes should be converted to the faith of the Jews? It would seem as if one must believe in the new dispensation, the New Testament.

Mr. CRUMPACKER. Yes.

Mr. McDERMOTT. What would happen if one of the tribes become converted to the faith of the Jews? They would be anti-Christian. Would they have the right to vote?

Mr. CRUMPACKER. The gentleman is asking a question, and I hope he will do me the favor of allowing me to answer it.

Mr. McDERMOTT. That is my question.

Mr. CRUMPACKER. Strange as it may appear to the gentleman, this bill is constructed to apply to the Philippine Islands as conditions exist there now. There are three classes of people in the archipelago—the Christians, the Mohammedans, and the pagans. The Christians are those who have the highest degree of civilization and possess some of the qualities that are necessary to maintain local self-government, but the non-Christian peoples have no knowledge of any but an extreme paternal government in the form of the tribe. That is the situation.

Mr. McDERMOTT. I hope the gentleman does not misapprehend my question. The Jews are anti-Christian.

Mr. CRUMPACKER. I am aware of that fact.

Mr. McDERMOTT. They cover every avenue in this world; they rule this world to-day; they will probably get into the Philippines. Do you propose that the anti-Christian Jew shall not vote?

Mr. CRUMPACKER. We do not propose any such thing.

Mr. McDERMOTT. Why do you not put it in your bill, then?

Mr. CRUMPACKER. The gentleman has read this bill to very little purpose if he gives it that interpretation. The legislation provided in the bill shall apply to Christian provinces, and suffrage is conferred upon all the inhabitants of those provinces without regard to religion. It applies to provinces dominated and controlled by Christian institutions, but there may be non-Christians, there may be Jews, there may be people of all shades of faith in those provinces, and they are given the same rights, both political and civil, as are accorded to the Christians.

Mr. Chairman, I think no fair mind can investigate the situation existing there now without reaching the conclusion that, under present conditions, independence would mean anarchy, bloodshed, and destruction. This Government could not, in honor to itself nor in justice to the inhabitants of those islands, withdraw its authority now and leave them to their own fate. Having destroyed their government, we are morally bound to protect them, not only against foreign powers, but against themselves. If independent, they would divide up into numerous principalities, headed by ambitious chiefs, and there would be continual war and destruction, and progress and improvement would be impossible.

Mr. GAINES of Tennessee. Will the gentleman yield?

Mr. CRUMPACKER. I will yield to the gentleman for a question only.

Mr. GAINES of Tennessee. The gentleman has stated that these people are not now capable of self-government.

Mr. CRUMPACKER. That is my judgment.

Mr. GAINES of Tennessee. And that anarchy and bloodshed would follow the attempt to establish it. In view of that statement, I ask the gentleman how is it, first, that the Malolos government did manage the island previous to the advent of the Americans there, and how is it that 28 members of the Malolos congress are now filling every kind of position in the Philippine Islands except governor?

Mr. CRUMPACKER. I do not admit that the Malolos government ever controlled anything. It had no control over the islands. There was a momentum to the Spanish power that continued existing institutions and local government in a number of provinces after the capture of Manila. The Malolos government had nothing to do with it.

Mr. GAINES of Tennessee. Does not the gentleman know that that Malolos constitution was written by the very men who are now in office there by the appointment of Governor Taft?

Mr. CRUMPACKER. That may be true, but it has no significance. Constitutions are easy to write, and they do not govern nor constitute government. The conservative thought of intelligent men in the centers of population in the islands is that they are not fit for self-government; that control by the United States is necessary for the welfare and prosperity of the islands; that if we were to withdraw our authority a reign of disorder and destruction would overthrow the political and social life of the people. I say that is the judgment of the conservative thought of the intelligent people of the islands. They have had no experience and are unfitted by temperament to organize and maintain anything like a respectable order of government. Only about 10 per cent of the inhabitants of the islands are educated. The other 90 per cent are grossly ignorant, superstitious, credulous, and facile. There is a total lack of the essential conditions necessary for the basis for free government. Public opinion in the archipelago is an impossibility. It has no means of organizing, no method of expression. It will require possibly two generations to establish the foundation for independent political life, and when that shall have been accomplished, if it be then the general and intelligent desire of the people of the archipelago that they be given independence, in my opinion that desire will be respected by the American people without hesitation or reluctance.

Mr. BARTLETT. What does the gentleman mean by that?

Mr. CRUMPACKER. Independent political existence.

Mr. BARTLETT. Independent of this Government?

Mr. CRUMPACKER. Independent of this Government. I say I have no doubt of it if the conditions justify it. That is simply a prophecy.

Mr. BARTLETT. I am glad the gentleman thinks it may come at some time.

Mr. CRUMPACKER. But under existing conditions it would be the height of unwisdom——

Mr. HILL. Cowardice.

Mr. CRUMPACKER. You mean it would be cowardly to withdraw?

Mr. HILL. Yes.

Mr. CRUMPACKER. It would be the height of unwisdom for Congress now to declare its purpose at any time in the future to grant independence, for it would cause agitation, create friction, and retard development. The only proper policy for this Government to pursue is that foreshadowed by this bill. We should go on with the splendid work that has been inaugurated by the Taft Commission. We should amplify and enlarge the civil government that has already been installed, develop the material resources of the islands, and administer them for the benefit of the inhabitants.

Mr. BARTLETT. The gentleman means under the House bill?

Mr. CRUMPACKER. Under the House bill; develop the material resources of the islands, construct railroads and highways, build schoolhouses, educate the people, create a common language and a common literature, establish a popular legislative assembly that will bring together representatives from all the provinces for their mutual welfare, and in the course of time there will come a condition of national unity, a condition of homogeneity that may be made the foundation of independent political existence. But until this has been accomplished no definite action should be taken in respect to the permanent disposition of the islands. This I understand to be the policy of the Republican party.

Mr. VANDIVER. Will the gentleman allow me to ask him a question?

Mr. CRUMPACKER. I will.

Mr. VANDIVER. I understood the gentleman a moment ago to take the position that the Filipinos had never at any time been encouraged by American officers in the belief that they were to have independence; and, specifically, I want to know if he asserts that as a fact, and denies positively that Aguinaldo was ever given any such encouragement?

Mr. CRUMPACKER. I decline to go into a discussion of a question like that—a question which is essentially subordinate and incidental, and which can not affect in any respect the duty or the policy of the Government now in relation to this great question.

Mr. VANDIVER. Do you now deny the fact?

Mr. CRUMPACKER. I will not discuss the question with the gentleman, because I do not have the time.

Mr. VANDIVER. I understood the gentleman a moment ago to make a denial, and I want to know whether he is willing to do it specifically.

Mr. CRUMPACKER. I ask that the gentleman respect my right to the floor.

Mr. VANDIVER. I certainly will.

Mr. CRUMPACKER. I hope the gentleman will be as good as his word.

Mr. VANDIVER. I understood the gentleman to yield to a question, and now he declines to answer.

Mr. CRUMPACKER. Mr. Chairman, I do not decline to answer a question that bears upon the vital propositions that are involved in this bill or in the legitimate debate incidental thereto. If the people of the Philippines are unfitted for independence, it would be a moral crime for this Government to cut loose from them, even if some American officer, without authority, promised them independence.

Mr. BARTLETT. Will the gentleman pardon me? I ask the gentleman this question: The gentleman does not consider the Senate bill will accomplish the purpose as well as the House bill does?

Mr. CRUMPACKER. Not so fully.

There is an incidental question that has received a good deal of attention in this controversy in investigation and debate, and that is the origin of the hostilities between Aguinaldo's forces and the Federal troops at Manila. The question as to who fired the first shot. Much time and ingenuity, and a great deal of energy, have been expended upon that circumstance, a circumstance that has no significance whatever. Gentlemen insist that the evidence clearly convicts the American soldiers of having fired the first shot on the night of the 4th of February, 1899. Supposing that is true, what is its significance?

This Government had deliberately decided that the Filipinos were not capable of conducting their own affairs, and that annexation was the only proper disposition of the islands. This meant American sovereignty, and Aguinaldo at the head of his army had fully determined to resist the extension of American sovereignty, and a conflict was inevitable. It could not be avoided. The outbreak on the night of February 4 was accidental and premature, but that which occurred by accident on that night would have occurred as the result of deliberation within a very few days at the farthest, so the question of who fired the first shot is of no real importance. We had decided to assert our authority over the archipelago and Aguinaldo had decided to resist our authority by force.

Mr. BARTLETT. Will the gentleman yield there?

Mr. CRUMPACKER. For a question.

Mr. BARTLETT. Does the gentleman think, then, after the statement he has just made, that it was the proclamation that was issued by General Otis that started the war?

Mr. CRUMPACKER. No, sir.

Mr. BARTLETT. You think the war was inevitable?

Mr. CRUMPACKER. War was inevitable; because it was the purpose of this country after the Paris treaty had been negotiated to assume control of the archipelago. Of course it was expected that the treaty would be ratified. This necessarily meant a conflict between Aguinaldo's followers and the American Army.

Mr. BARTLETT. Then, if it was not the proclamation of President McKinley, issued by General Otis, to extend the authority of the United States, it must have been the action of the United States Government in ratifying the treaty that was the cause of war.

Mr. CRUMPACKER. It was the action of the United States Government on the one side and of Aguinaldo and his followers on the other. The United States Government fully, deliberately, and justly decided that duty to itself and to the people of the Philippine Islands demanded the establishment of American authority there, and in doing that, resistance was encountered.

Mr. HAMILTON. The treaty had not been ratified when the hostilities began.

Mr. CRUMPACKER. It had not been ratified, but was about to be. It was quite generally understood that it would be. Agoncillo was here. He was an emissary of the insurgent leader, and before hostilities began he left between two days for Canada, having satisfied himself that the treaty would be ratified and he knew that meant war. Agoncillo had no knowledge that the conflict would occur before the ratification of the treaty, and it was not intended that it should.

Mr. HAMILTON. Permit me to suggest to the gentleman that the testimony is that the Filipinos had planned that attack for some months before they began.

Mr. CRUMPACKER. Why, all this time they were getting ready for war. But it was their intention to await the action of the Senate on the treaty, and then make the most stubborn resistance possible against the extension of American authority.

Mr. POU and Mr. GAINES of Tennessee rose.

Mr. CRUMPACKER. I must decline to yield. I want to talk about the bill. I hope the gentlemen will pardon me.

Mr. POU. I desire to ask the gentleman a solitary question.

Mr. CRUMPACKER. I will answer a solitary question.

Mr. POU. As I understood the gentleman a while ago, he stated that he believed that whenever the Filipinos arrived at a proper stage of civilization that independence would be accorded them by this Government. I understood him further to say that he favored that course. Now, I would like the gentleman to state the reasons why a declaration of that policy on the part of our Government should not now be made.

Mr. CRUMPACKER. The gentleman did not understand me correctly in the first place. I said when the time comes that the Filipinos are capable of independent self-government, and there is an intelligent and general desire on their part for it, in my judgment the American people will grant it. But I am simply giving my own opinion on that question. That proposition belongs to the future, and it can not be settled now. We can not foresee now what the future has in store; we can not foresee what may be evolved in five or ten or twenty years. And if we should make such a declaration now it would be seized upon by the demagogues, the disturbers, the agitators down there, and made a pretext for insurrection and trouble without end. It would be practically impossible for us to carry out the broad and humane policy of education and development that we have outlined and propose to pursue. [Applause on the Republican side.]

Mr. FINLEY rose.

Mr. CRUMPACKER. I can not yield to the gentleman now; my time is too short. I want to call attention to some features of the bill. Criticism has been made of the franchise provision. If the provisions of the bill respecting franchises and sale of public lands are subject to just criticism at all, it is because they are too rigid [applause on the Republican side]; franchises are granted under such restrictions and limitations that I am apprehensive that proper development will be seriously retarded. Every safeguard that could be devised has been thrown around the action of the Government in granting franchises and in disposing of public lands. Undue exploitation by speculators and syndicates is made impossible. The public domain is to be held for actual settlers.

Mr. BARTLETT. The gentleman is referring to the House bill, and not to the Senate bill.

Mr. CRUMPACKER. I think the Senate bill contains substantially the same provisions as the House bill on the question of franchises. While I am not a champion of corporate interests, we all recognize the value of those agencies in the development of a country, and under proper restrictions they are to be encouraged. American capital is needed in the Philippines for the purpose of building railroads, telegraph lines, factories, and other enterprises, and it will not go there unless the inducements are sufficient. Modern industrial and commercial institutions will do as much toward educating and elevating the people as any other agencies, and if we have made any mistake in the bill in these respects, it is in imposing too many restrictions upon them.

Mr. COOPER of Wisconsin. If the gentleman will allow me, in view of what the gentleman has said, the Senate bill provides that no corporation engaged in agriculture shall be a member of any other corporation. That would permit the formation by the same set of individuals of a thousand corporations under different names. The House bill provides that no member of a corporation engaged in agriculture shall be a member of any other corporation.

Mr. BARTLETT. That was the reason that I asked the question as I did of the gentleman.

Mr. CRUMPACKER. There is one very important feature of the House bill that is not contained in the Senate bill, and that is the provision for a legislature in the Philippines. That I regard as one of the most important of all of the provisions of the bill. It provides that after general and complete peace shall have been secured throughout the archipelago and that fact shall have been certified to the President by the Commission he shall order a census of the population to be taken, and after the completion of the census the Commission shall proceed to divide the Christian provinces into legislative districts and the electors of the several districts are authorized to choose members of a popular legislative assembly to sit at Manila. The upper branch of the legislature is to be composed of the Philippine Commission. No bill can be enacted into a law except by the concurrence of the Commission. Until the legislature is established the Commission is authorized to continue to make laws for the archipelago.

Mr. LITTLEFIELD. Does the House bill give the territorial governor a veto power?

Mr. CRUMPACKER. No; the bill places the veto power practically in the Commission. The governor is a member of the Commission, and the concurrence of the Commission is necessary in every bill enacted into law.

This is one of the most important provisions of the bill, and it is recommended by the Federal party in the Philippines, the strongest political organization in all the archipelago, an organization that has more influence in molding and controlling public sentiment than all other organizations combined, an organization that concedes that the inhabitants of the islands are not competent for self-government, an organization that has stood by and is now standing by the United States Government in asserting its authority and in pacifying the provinces.

In addition to this, the Philippine Commission earnestly and urgently requests the legislative feature. Governor Taft has not missed an opportunity to impress upon Congress the vital importance of a popular Filipino legislative assembly, and I believe he knows more about the requirements of those people than any other living American. [Applause.] We have sent him and his Commission there to restore order and to reorganize and reenergize the prostrate forces of the islands. His work has already far more than vindicated the wisdom of his selection. He has made no mistakes, but he still has a mighty work to accomplish. We expect to hold him responsible for the success of his policies, and this we can not justly do unless we give him the means he so earnestly recommends.

In a very able article upon the situation in the Philippines, published in the Outlook on the 31st of May, Governor Taft said:

> We of the Commission are very earnest and sincere in our hope that at least the provision for the election of the legislative assembly and of the two delegates contained in the House bill shall be embodied in legislation. We think that the Filipino people would accept this provision as the most indubitable evidence of the desire of the United States that self-government should be given to the people in as large a measure as they are capable of carrying it on. Danger from obstruction of the government by withholding supplies is avoided in a section of the House bill by a provision that, should the appropriation bill not be passed, appropriations equal to those of the year

before shall become available without legislation. There are members of the Senate Committee on the Philippines who believe that the step involved in the organization of a legislative assembly is too progressive and too radical. In this I think they are mistaken. It is quite possible that on the floor of the legislative assembly will be proclaimed doctrines at variance with the policy of the United States, and that possibly, by some members, seditious and treasonable speeches may be made; but, on the whole, I feel sure that the people will regard the legislative assembly as a welcome method by which they can take part in the government, and that there will be every disposition on the part of most of the members to work harmoniously with the other branch of the legislative department and with the Executive. It has been suggested that possibly the legislative assembly would select Aguinaldo, or Mabini, or some other prominent insurrecto leader or organizer to represent it at Washington. I do not think this is likely, but even if it were to happen, I should not regard it as a dangerous result. I think it would be found that the popular assembly would include many conservative men who would be in favor of supporting American sovereignty in the islands and making the government it has established firm and stable. A provision of this kind would destroy at once the suspicions of American good faith, and would largely satisfy the desire for self-government of all but the comparatively few irreconcilables. A popular assembly would be a great educational school for the better class of Filipinos in actual government. The weakness of the educated Filipinos to-day is in their lack of practical knowledge as to how a popular government ought to be run. They always resort to absolutism in practical problems of government. The restrictions upon the suffrage contained in the municipal code, which are by reference made part of the House bill, would secure a fairly intelligent body of representatives in the popular assembly.

A popular legislative assembly will bring men together from all the provinces to promote their common interests. It will have a powerful influence in building up a national spirit, and its educative value will be incalculable.

The assembly will probably propose some unwise measures, it will likely be the center of conflicting views and impracticable schemes, but that is the best school for instruction in self-government. If it neither said nor did any foolish things there would be no need for a Taft Commission in the islands at all.

It is too much to expect that high standard of debate and deliberation that characterizes the action of the American House of Representatives. [Laughter.]

Safeguards are thrown about so that it is impossible for a popular assembly to do any serious harm if it were so disposed. It can pass no law without the concurrence of the Commission.

Mr. LITTLEFIELD. It also follows that the Commission can not legislate without their consent.

Mr. CRUMPACKER. That is correct. The Commission can make no law without the concurrence of the assembly.

The Commission understands that full well, and it understands the Filipino character and realizes the effect that this provision would have as a guaranty of good faith toward the people of the islands. The seeds of distrust have been industriously scattered by designing politicians there and perhaps here. The suspicious and credulous natives, whose only knowledge of the white man comes from their sad experience with the Spaniards, are easily induced to believe that the Americans are capable of imposing upon them systems of tyranny and oppression. Nothing will allay that distrust and disabuse their minds of that suspicion so completely as a popular assembly which will afford them a voice in making their own laws.

In addition to this the bill authorizes the insular government to grant homesteads and tracts of public lands to actual settlers free of cost in the hope of inducing a continually increasing number of natives to preempt and occupy farms. Homesteads are limited to about 40 acres each. A tract of 40 acres in those islands will yield more products than 160 acres of average land in this country. The bill also provides for the utilization of the magnificent forests in the archipelago under adequate safeguards for their preservation. A large share of the wealth of the islands is in the forests. The finest timber that can be found on the face of the earth abounds there. There are about 70,000,000 acres of land in the archipelago and only about 5,000,000 acres of it is in private ownership. Perhaps 45,000,000 acres are covered with forest trees that have great commercial value. Lack of railroads and highways has heretofore prevented the forests from being explored excepting along the coast and the streams.

A complete and perfect system of mineral laws is contained in the bill. I doubt if a more admirable system of mining and mineral laws can be found in any country—a system that is apparently well adapted to conditions as they exist there, and with it all sufficient safeguards are provided to secure the resources of the islands against the undue exploitation of syndicates and speculators. Authority is granted the government to authorize corporations to purchase and hold lands, but limitations are imposed that will prevent many of the abuses of corporate power that have been a source of embarrassment in this country.

A system of coinage is provided in the House bill, putting the currency of the islands upon the gold standard. The peso, containing about the same quantity of silver as two American half dollars, is to be coined and maintained upon a gold standard at the value of fifty cents, and it will be the standard money of account. The peso is subdivided into 100 centavos, and an ample number of minor coins are to be issued. The transactions of the inhabitants as a rule are very small, and small coins are highly necessary for the daily use of the people.

The currency of the islands is now composed principally of Mexican dollars and Spanish pesos and is upon a silver basis, and the fluctuations are such that in all transactions, particularly those in foreign trade, a considerable share of the profits is absorbed by the bankers, in the purchase and sale of exchange. The bulk of the foreign trade of the islands is and will continue to be with gold-standard countries, and even transactions with silver-standard countries, in their final analysis, are resolved to the gold standard. Silver-standard countries are badly handicapped in foreign trade because of the fluctuations of silver. Every transaction involves an element of speculation, and the dealer in exchange must increase the cost enough to cover any possible loss by fluctuation. This characterizes both buying and selling exchange, and it is sound and safe policy to base the currency of the islands upon the gold standard, and at the same time provide coins of such denomination and value as are familiar to the Filipino mind. The peso is current there now, and it is worth, approximately, 50 cents in gold, and this bill makes that value absolute; it stabilizes the peso. There will be no fluctuation. Abundant provision is made in the bill for the maintenance of the standard of the peso. No disturbances can occur, because the new system simply stabilizes the peso at what is now its approximate value.

There will be no readjustment of prices or wages, but trades people and laborers will be protected from loss by a fluctuating and unstable currency. It was my judgment originally that it would be better to extend the American system of coinage to the islands at once, but in view of the fact that it would result in a general readjustment of prices, entailing considerable loss to many who would not be informed respecting the effect of the new condition of things, and in view of the further fact that the temptation to counterfeit American silver dollars would be great, I am fully persuaded that the system contained in the bill is decidedly preferable.

These are the main features of the bill. It supplements and amplifies and makes permanent the work the Commission has so admirably instituted. It contains a guaranty to the inhabitants of the islands of a large, if not a controlling, share of local government. When peace shall have been established, under the operation of this bill, there can be no doubt that enterprise will be set on foot, prosperity will come, and a condition of wealth and comfort will be enjoyed by the inhabitants such as they have never experienced in all the years of their existence.

The enactment of this bill commits this Government to no permanent policy. It is a necessary step in furtherance of the policy that has been inaugurated. At any time in the future, if the people of this country should decide that it would be well to grant the inhabitants of the islands absolute independence, the measure which we propose will in no way interfere with the accomplishment of that purpose, but on the other hand its effect will be to put them in a condition so they will be fit for independence. It is just such a measure as would be necessary if it were our declared purpose to grant independence to the inhabitants of the islands within the next decade. It lays the foundation for civil government according to the republican model; it initiates the people into the art of self-government and its influence must be educative and elevating.

This Government has a great missionary work to perform. Its supreme duty is to administer the affairs of those islands for the benefit of the people thereof, to promote development in keeping with their capacity and along the line of their aspirations and traditions. Political, commercial, and social unity should be accomplished, and when that is done the foundation will have been laid for independent self-government, and not before.

It should be the highest concern of this Government to prevent the undue exploitation of the islands by spoilsmen, adventurers, syndicates, and speculators, for there lies the greatest danger. The labor question is one of the most serious among all the difficult problems that confront us. The fruits of nature are so abundant that little exertion and sacrifice are required for subsistence. The climate is so mild that little in the way of clothing and shelter is demanded. The inhabitants of the islands have the weaknesses that are characteristic of tropical peoples. There is an absence of moral force, a lack of the rugged qualities of industry, frugality, and integrity. They are not inclined to work more than is necessary for a comfortable subsistence, and while wages are nominally low, the labor cost of production there is greater than it is here. Already promoters of enterprises are clamoring for the admission of Chinese labor, but Congress has firmly refused their demands. Lack of labor will hold development in check somewhat, but it is better that growth be not too

precipitate. Material development should lead, but not outrun intellectual and political growth.

Education will do much for the elevation of the people, but not everything. It must be supplemented by conditions that will excite a spirit of emulation, of pride of country, and of ambition for a better standard of life.

Taking the situation as a whole, we may well congratulate ourselves upon the progress we have made in establishing peace and order in the islands. This Government is founded upon the idea that all just government obtains its power from the consent of the governed. That principle is as potent to-day as it was one hundred and twenty-five years ago, and it is being applied to the Philippines as fast as they emerge from the political nursery. They will have as full control of their affairs as they are able to carry. The doctrinaire and the sentimentalist need have no qualms of conscience upon that subject. Time will vindicate the wisdom of the policy and the benevolence of the motives of the great men now engaged in establishing peace and government in the archipelago. [Applause.]

The Trusts are Fattening on the Unrequited Toil of the Wage-earner and the Farmer.

Since the Republican party came into power in 1897 relative real wages have constantly declined, until to-day a day's wages will purchase less of the necessaries of life than at any time since 1896.

It now requires more of the farmer's wheat and cotton to pay for his necessaries than it did four years ago.

A bill (H. R. 15109) to place all articles and commodities manufactured and controlled or produced in the United States by a trust or trusts on the free list, and to reduce the rate of duty on any article or commodity manufactured in the United States and sold in a foreign country more cheaply than in the United States.

SPEECH

OF

HON. JOHN H. SMALL,

OF NORTH CAROLINA,

IN THE HOUSE OF REPRESENTATIVES,

Monday, June 30, 1902.

The House having under consideration the bill (H. R. 11654) to promote the efficiency of the militia, and for other purposes—

Mr. SMALL said:

Mr. SPEAKER: "The prosperity of the workingman" is the slogan with which the Republican party attempted to conjure the voters of the great industrial communities during the last two political campaigns, and even now, when prices of the necessaries of life are at the highest point which has been reached in more than a dozen years, Republican statesmen are telling the men who toil for their daily bread that they were never so prosperous in all their lives, and that they ought to be the happiest people on earth.

In the campaign of 1900 "the full dinner pail" was the catchword, and for some mysterious reason the workingman became enthused to such a point that he did not stop to think until after he had voted. Since election day he has taken time to do a little thinking. He has taken a look into that dinner pail and is astonished to find that it is not exactly full. He finds, too, that it is much more difficult to fill it now than it was five years ago. He works harder and produces more than he ever did in his life, but he has less to eat and wear than he ever had. He does not quite understand why this is so, but he is becoming very much interested and he is beginning to see things as they are.

If these are such prosperous times for the workingman, will some of his good friends in the Republican party please explain how it is that such conditions exist as I shall presently show?

Pennsylvania ought to be a good example of prosperity for the wage-earner. That State has grown rich under a protective tariff, and one of the excuses offered by the friends of protection for the enactment of high-tariff legislation is that it is to protect the workingman—to give him higher wages.

The following table compiled from the report of the secretary of internal affairs of the State of Pennsylvania for the year 1900, shows how the wage-earner has fared in that State. This table shows the value of products produced by each employee and the percentage of this value of products which was paid to wage-earners in 830 manufacturing establishments for the years 1896 to 1900, inclusive:

Year.	Value of products per employee.	Value of products paid to wage-earners.
		Per cent.
1896	$1,427.95	26.6
1897	1,490.56	25.6
1898	1,565.49	25.5
1899	1,831.41	23.7
1900	1,894.11	23

It will be observed from the figures in the table that in 1896 each employee in these 830 establishments produced manufactured products to the value of $1,427.95, and that this value increased from year to year until in 1900 it was $1,894.11. In 1896 26.6 per cent of the value of products per employee was paid in wages, and, notwithstanding the fact that each employee has produced more and more each year, his share in this production has grown less and less each year, until in 1900 he received only 23 per cent.

Now, let us examine conditions in another great manufacturing State. The bureau of labor for the State of New York has in a recent report furnished facts that show conclusively that the workingmen of that great State have not shared in the wonderous prosperity that our Republican friends talk about so much. The following summary table presents the facts concerning the percentage of increase in the number of employees and the total amount of wages paid in certain industries in the State of New York from 1896 to 1899 for 3,112 establishments.

Industries.	Number of establishments.	Percentage of increase in number of employees.	Percentage of increase in total amount of wages paid.
Stone and clay products	197	11.5	8.2
Metals, machinery, and apparatus	989	26.0	20.7
Wood	389	14.3	10.4
Leather, rubber, pearl, etc	222	19.7	16.7
Chemicals, oils, etc	123	13.1	5.2
Printing and allied trades	417	9.3	8.1
Textiles	238	13.0	8.1
Food, tobacco, and liquors	347	17.5	11.1
Building	190	7.8	2.1

The figures in the table above, it seems to me, should satisfy anyone beyond all question that the workingman is not receiving a proper share of the wealth that he produces. But let us hear further testimony. The bulletins issued by the Division of Manufactures in the Census Office furnish abundant evidence corroborative of the testimony of the bureau of labor for the State of New York. The following table, compiled from census bulletins, shows the percentage of increase in the number of wage-earners and total wages paid in the United States and in five manufacturing States during the decade from 1890 to 1900:

	Increase of wage-earners.	Increase of total wages paid.
	Per cent.	*Per cent.*
United States	25.2	23.2
Illinois	41	34
Massachusetts	11.2	10.9
New Jersey	39	32.7
New York	12.9	10.4
Pennsylvania	28.7	26.1

It is here seen that the aggregate number of wage-earners employed in all manufacturing and mechanical industries in the United States increased 25.2 per cent during the decade 1890 to 1900, while the total wages paid to these employees increased only 23.2 per cent. In the great State of Illinois the number of wage-earners increased 41 per cent, while the total wages paid increased only 34 per cent. In New Jersey, the home of the trusts, wage-earners increased 39 per cent, but the total wages paid increased only 32.7 per cent. And so, in all the great manufacturing States shown above, the amount paid in wages has not kept pace with the increased number of wage-earners.

But the figures of the Census Office make a still stronger showing to support the assertion that the workingman is not obtaining an equitable share of the fruits of his toil. The following table shows the percentage of the total value of products paid to wage-earners in the United States and in certain States in 1890 and

1900 and the percentage of decrease in the wage-earners' share of the values they created:

	Percentage of total value of products paid to wage-earners.		Percentage of decrease in wage-earners' share of product values from 1890 to 1900.
	1890.	1900.	
The United States	20.2	17.8	11.9
Illinois	15.7	15.3	2.5
Indiana	18.8	17.7	5.9
Massachusetts	23.2	22.5	3
New Jersey	23.4	18	23.8
New York	21.7	18.8	13.4
Ohio	20	18.6	7
Pennsylvania	19.8	18.1	8.6
Rhode Island	23.3	22.3	4.3

The above table shows that in 1890 the wage-earners of the United States received in wages 20.2 per cent of the value of all the manufactured products for that year, while in the year 1900 they received in wages only 17.8 per cent of the product value. Or, in other words, the wage-earner's share of the wealth that he created has been diminished year by year until now he is receiving nearly 12 per cent less than he did ten years ago. And taking up the States shown in the table above, one by one, we find that the wage-earner's share of the product values during this decade has decreased 2.5 per cent in Illinois, 5.9 per cent in Indiana, 3 per cent in Massachusetts, 23.8 per cent in New Jersey, 13.4 per cent in New York, 7 per cent in Ohio, 8.6 per cent in Pennsylvania, and 4.3 per cent in Rhode Island.

Our Republican friends tell us that the average earnings of the workingman have gradually increased from year to year until they are now higher than ever before. This bare statement is liable seriously to mislead the unthinking.

President John Mitchell, of the United Mine Workers of America, in his excellent address to the public, on June 22, not only presented all kinds of facts and reasons why the railroad coal barons can well afford to pay higher wages to miners, but he stated one fact which applies to all wage-earners, and which undoubtedly is the cause of many of the strikes now disturbing industry.

After quoting figures showing that the average wages of miners are only $1.42 a day, and that miners are employed less than two hundred days in a year, and therefore earn annually less than $300, President Mitchell says:

> Such pay may supply a living on a par with some classes of European laborers, but who will say that it is sufficient to support American citizens or educate and properly maintain their families? True it is that a 10 per cent increase in wages was granted by the coal operators as a strike concession two years ago, but it is also true that a large portion of that 10 per cent was paid back to the companies to buy the suppression of an old powder grievance. Moreover, according to reliable commercial agencies, the cost of living has increased, particularly in the purchase of food stuffs, from 30 to 40 per cent, so that the purchasing power of a miner's wages is less than before the strike of 1900.

The Pennsylvania report already referred to shows that the average daily earnings of the wage-earners employed in 830 establishments was $1.41 in 1896 and $1.52 in 1900, or an increase of 7.8 per cent. We will grant that this is true, but let us see what $1.41 would buy in 1896 as compared with what $1.52 would buy in 1900.

R. G. Dun & Co. (and I think they are everywhere considered careful and honest in their statements), are publishing in Dun's Review from month to month the cost of a year's supplies for a single individual. The following index figures taken from Dun's Review show the average prices at the different days mentioned of 350 articles of consumption, with due allowance for the relative importance of each:

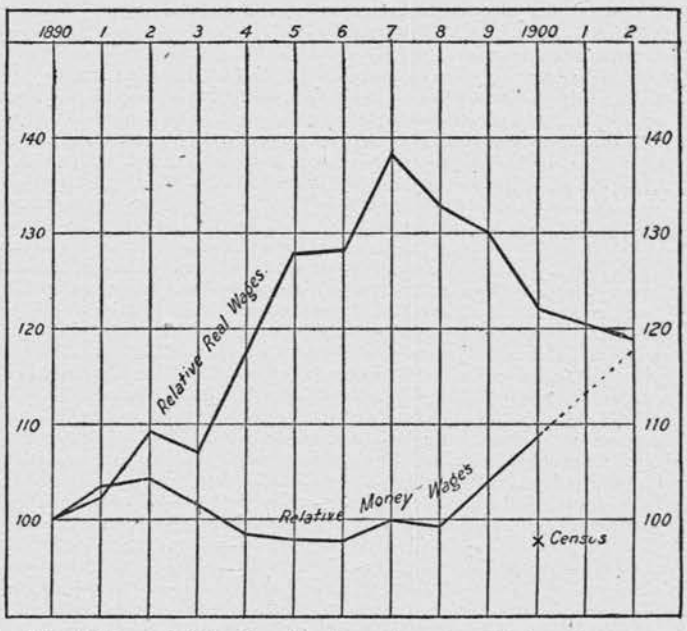
	1890, Jan. 1.	1897, July 1.	1900, Jan. 1.	1902, May 1.
Breadstuffs	$13,765	$10,587	$13,254	$19,954
Meats	7,620	7,529	7,258	10,968
Dairy and garden	12,675	8,714	13,702	14,737
Other food	9,935	7,887	9,200	8,742
Clothing	14,845	13,808	17,484	15,527
Metals	16,240	11,642	18,085	15,702
Miscellaneous	15,111	12,286	16,312	16,654
Total	90,191	72,455	95,295	102,289

From these figures it will be seen that in 1896, when the Pennsylvania workingman was receiving $1.41 a day, he had to work fifty-one days to pay for a year's supplies. While in 1902, assuming that his wages were the same as in 1900, or $1.52 per day, he was required to work sixty-seven days for his year's supplies.

Referring to Dun's figures, it is seen that the cost of living was 6 per cent greater in 1900 than in 1890, 31 per cent greater in 1900 than in 1897, and 41 per cent greater in May, 1902, than in 1897. According to these and previous statistics from Dun's Review, the cost of living on May 1, 1902, was greater than ever before recorded.

The 10 per cent increase given the miners was not one-third enough to compensate them for the increased cost of living up to 1890. Since then the cost of living has increased 7½ per cent more and the miners are wondering what is wrong with their wages. When they saw that the trust increased the cost of coal in 1901 more than 31 per cent over the price of 1890, they said, "We will ask for higher wages and stop work if we don't get them."

The poorly paid silk weavers of Paterson, the street-car men of Rhode Island, and many wage earners in other industries have been driven to ask for higher wages by the same unseen force which has quietly been at work reducing wages. It should be remembered that the real wages of labor are goods and not dollars. Men do not eat or wear money; they have to exchange their money wages for goods before they can tell whether wages are high or low. As the trusts have advanced prices more than 40 per cent since 1897, the trusts have virtually reduced wages more than 30 per cent.



It is not of so much consequence what a man receives for his labor in dollars and cents as it is in what he receives in the necessaries of life. It matters not whether a workingman receives $1 per day or $2 per day if it requires all he earns, whether it be $1 or $2, to purchase the necessaries of life. As a simple proposition of bookkeeping, it makes no difference to him whether he receives in a year $500 for his labor and expends $500 for his living or whether he receives $1,000 for his labor and expends $1,000 for no better living than he bought with $500. The fact is that his real wages consist of what he can buy with the money he receives as wages.

It is a fact that can not be controverted that all the necessaries of life have gradually risen in price, and that this advance in the prices of necessities is greater than any advance in wages paid the workingman either in rates or in earnings.

The fact that real wages were higher in 1897 than in 1899 was shown in a chart exhibited at the Pan-American Exposition. The following diagram is practically a copy of this chart from 1890 to 1898. From 1898 to 1899 it is based upon labor department figures. From 1900 to 1902 it is based upon Dun's monthly summary of relative prices and upon the assumption that money wages rose as fast from 1900 to 1902 as from 1898 to 1900:

Diagram showing relative money and real wages.

[Drawn from charts of the Department of Labor exhibited at the Pan-American Exposition and (since 1900) from Dun's "index numbers" of prices based upon supposition that money wages rose as much from 1900 to 1902 as from 1898 to 1900.]

The table published by the Department of Labor in connection with the diagram shows that the minimum relative real wages were reached about 1865. From that date the purchasing power of a day's work at prevailing rates of wages gradually increased, with now and then slight decreases, until the maximum was reached in 1897. Or in other words a day's work at the prevailing rate of pay was worth more to the wage-earner from 1893 to 1897 than

it ever was before, and, what is most significant of all, in the face of the extravagant statements that are being made in Republican newspapers and by Republican statesmen, it was higher then than it has ever been since.

Beginning with the administration of Mr. McKinley in 1897 relative real wages were 202.3, and they have come down every year since.

But the figures of the Department of Labor show a rise of only 20 per cent in prices from 1897 to 1900, while Dun's figures, which include many more commodities, show a rise of 31 per cent from July, 1897, to January, 1900. Again, the Department of Labor figures show a decline in prices from 1890 to 1900, while Dun's show a rise of 6 per cent from 1890 to 1900. Again, the Department of Labor figures show an increase of about 4 per cent in money wages from 1890 to 1900, while the census figures, which include all manufacturing industries, instead of only a few occupations in a dozen cities, show a decline of 1½ per cent in money wages from 1890 to 1900.

If, then, a similar chart should be constructed upon the figures of the United States census and of Dun's Index Numbers it would show relative money wages 1½ per cent lower than in 1890 and relative real wages 7 per cent lower in 1900 than in 1890. It is practically certain that the advance in money wages since 1890 has not kept pace with the advance in prices, and that real wages are now even lower than in 1900.

Stated plainly, the statistics, no matter from what source gathered, indicate that while our wage-earners may receive a few more dollars now than they received in 1890 or 1897, yet when measured in what the dollars will buy—bushels, pounds, gallons, yards, etc.—the wage-earner is now but little, if any, better off than in 1890 and not nearly as well off as he was in 1897.

If, as most trust promoters and defenders proclaim, trusts cheapen production and lower prices, the cost of living should be lower now instead of higher than ever before. It is rather unfortunate for the trusts and their friends that the great rise in prices should correspond exactly with the great growth of trusts. Census Bulletin No. 122 contains information concerning 183 "industrial combinations" having a total authorized capital of $8,607,539,200, over $3,000,000,000 of which has been issued. Of these 183 trusts 63 were formed prior to 1897, 7 in 1897, 20 in 1898, 79 in 1899, and 13 in 1900 prior to June 30. More than half of all were chartered between January 1, 1899 and June 30, 1900. Nearly half of these trusts were formed during 1899, the year of the greatest advance in prices. The index number for prices, which stood at 80,423 on January 1, 1899, rose to 95,295 on January 1, 1900, and prices have still further advanced.

These facts should silence forever the claims that trusts justify their existence by the lower prices which they give us. Trusts may, and probably do, lower the cost of production; but this is a very different thing from lower prices to consumers.

It is undoubtedly true that these trusts are selling their products to foreigners at unusually low prices. They are, however, protected in our markets by tariff duties averaging, on manufactured goods, including prohibitive duties, about 75 per cent. The trusts, seeing that we have put this high-tariff wall around ourselves, and presuming that we therefore prefer dear goods, have decided to mark up prices to us to the highest possible notch. Often they charge us 50 to 100 per cent more than they charge foreigners for the same goods.

The census statistics of manufactures also show that the average value of each wage-earner's product increased from $2,284 in 1890 to $2,456 in 1900. Why, we may ask, should wages go down 1½ per cent when the value of each wage-earner's product has gone up 11 per cent, and when the cost of living has increased 6 per cent? Are these some of the "blessings" of trusts and the signs of permanent prosperity? The fact that the census figures for 1890 and 1900 were made on a slightly different basis may change these percentages somewhat, but not enough to change the general results materially.

Again, apparently, the 1900 wage-earner got in wages less than one-fifth of the value of his product. Deducting, however, the cost of materials used and salaries and miscellaneous expenses, and making allowance for interest on capital, depreciation of plant, and cost of selling the products, the difference between the wages of each earner and the value of his product is greatly reduced, though it is probably still very great. As the wage-earners constitute the great bulk of consumers, it is evident that if wages and prices get so far apart that the wage-earners can not, with their wages, buy back more than half of their product, a great surplus of goods will soon be created. This surplus must be sold at greatly reduced prices, such as rule during times of so-called "business depression." Perhaps the Napoleons of industry in charge of our protected trusts will succeed in upsetting the old and apparently natural order which shall contain only prosperity, unalloyed, unadulterated, and everlasting. We shall see.

It is worth while to note that Sauerbeck's "index" tables show that in December, 1901, prices in England were only 16 per cent higher than they were in July, 1896, and that they declined 5 per cent there in 1901, while they rose here about as much. England has few trusts; we have many. England's trusts are unprotected by tariff duties, ours revel in high protection. The table of prices tells the rest of the story.

Naturally it first occurs to dissatisfied wage-earners to strike to have their wages catch up with trust prices. But there is another and more certain way of raising wages. It involves no loss of time, no riots, no bloodshed, no payments to strikers, no hunger and starvation.

We have seen that actual wages go down when prices go up. It follows that when prices go down wages will go up. The trusts can put prices up in this country because they are protected by high tariff duties which keep out foreign competition. Take away these duties and prices here must come down to about the foreign level. To take off tariff duties will not hurt the trusts and close up mills, because they are now selling their products in foreign markets at prices often 50 per cent below those charged at home.

Instead of closing up mills and throwing labor out of employment, no tariff and lower prices will increase the sales of trust goods and, increasing the output, cause a greater demand for labor. Thus not only will the removal of duties raise actual wages by lowering prices, but it will raise money wages as well, for it is only a demand for labor that can result in permanently higher wages. High trust prices mean restricted production, less demand for labor, and, in the end, lower wages. Thus the excessively high trust prices of the last few years are surely laying the foundations for strikes and hard times. It can not be otherwise. As you sow, so shall you reap. High prices would probably have caused hard times before now but that we have had many years of good crops, while foreign countries have had poor crops. Even good crops can not much longer keep prosperity for the trusts and for certain farmers, and they are the only ones who have really enjoyed prosperity during the last three years. The Eastern farmers and mechanics and laborers are enjoying only imaginary prosperity, and many of them not even that.

Now, there is another class of people whom Republican statesmen have been attempting to persuade that they are exceedingly prosperous. That class of people that creates more of the wealth of this country than all other classes combined, that class of our people which toils from sun to sun, that class of our people that lives away from the cities and populous centers, that class of our people that is too busy to devote much time to politics and the affairs of politicians, that class of our people upon whom all other classes depend—the farmers of this country—are being told and have been told during all these years of Republican rule that they never were so prosperous in all their lives.

They are going to be told again this year upon every stump in the land that they are in better condition than they have ever been in their lives and that such good condition is all on account of the beneficent legislation of the Republican party, and that if that party is not continued in power the farmer will soon be a pauper and his farm a howling wilderness. But let us see whether the farmer is so prosperous or not. Let us make some figures and let them speak as to the truthfulness of the assertion that the farmer is receiving more for his products than he has received for years and years before.

We will compare the year 1897, the first year of a Republican Administration, with the year 1901, also under the same Republican Administration, and not a day intervening in which the Republican party was not in full control of the Government. I say let us compare these two years and see whether the tendency of prices has been in favor of the farmer or not. If they have been, and any political party is entitled to credit for it, that credit is due the Republican party. If these years have not been years of prosperity, then the Republican party is responsible if any party is responsible.

We will take a list of articles the wholesale prices of which are published by the Government and see what these articles were worth in 1897 and what the same articles were worth in 1901. We will include in our list salt, sugar, spool cotton, sole leather, bleached sheetings, dress goods, kerosene oil, axes, barbed wire, nails, shovels, and other things which the farmer needs and must have. The bill of goods above alluded to cost at wholesale in 1897 $43.04 and in 1901 $55.34. If we add to these wholesale prices 33⅓ per cent for retailers' profits (and this is an exceedingly small addition for such profits), we find that the retail price of this bill of goods in 1897 is $57.39 and that the identical articles in 1901 cost $73.79, or an increase of 28.2 per cent.

If a Western farmer purchased this bill in 1897 and sold wheat to pay for it, it required 72 bushels of wheat, and when he bought the same goods in 1901 he had to sell 102 bushels of wheat to pay the bill. The cotton farmer of the South who bought a bill of goods like this in 1897 was required to sell 802 pounds of cotton to pay the bill, while in 1901 he had to sell 855 pounds of cotton.

Had it not been that the Almighty, in His wise providence,

withheld the proper proportion of sunshine and rain during the year 1900, and thus reduced the production of cotton, the cotton farmer would have found himself in practically the same situation as regards the quantity of his product necessary to purchase the necessaries as the wheat farmer.

The following table shows the average wholesale price of the articles mentioned therein for the years 1897 and 1901, and the percentage of increase from 1897 to 1901:

Articles.	Price in 1897.	Price in 1901.	Percentage of increase.
Fine salt.....barrel..	$0.62	$0.86	38.7
Granulated sugar.....pound..	.04½	.05	11.1
Grain bags.....each..	.13	.14	7.7
Wool shawls.....do....	4.10	4.90	19.5
Brown sheetings.....yard..	.04½	.05	11.1
Bleached sheetings.....do....	.06	.07	16.7
Clay worsted (men's suitings).....do....	.76	.91	19.7
All wool dress goods.....do....	.24	.32	33.3
Bar iron.....pound..	.01 1/10	.01 8/10	63.6
Barb wire.....100 pounds..	1.80	3.03½	68.6
Wire nails.....keg..	1.48½	2.36½	66
Shovels (Ames).....each..	.66	.76	15.2
Cement.....barrel..	.75	1.02	36
Pine doors (white pine).....each..	.81	1.89	133.3
Linseed oil.....gallon..	.33	.64	93.9
Window glass.....50 sq. ft..	2.20	4.13	87.7
Ash bedroom furniture.....set..	8.75	11.25	28.6
Table knives and forks.....gross..	5.00	6.50	30
Manila rope.....pound..	.06	.11	83.3

The above figures speak more forcibly than words. It is of peculiar interest to note that the increase in price of bar iron during this period of four years was 63.6 per cent. This table is more suggestive when we consider the fact that bar iron enters into every machine and implement which the farmer is compelled to use to produce his crops, and I assume that no one will undertake to say that all of these utensils have not increased in substantially the same proportion as the iron from which they were made. The popularity of wire nails has, to a certain extent, driven cut nails out of use, and the nail trust, taking advantage of this fact, has seen fit to increase the price of wire nails during the four years under consideration 66 per cent, but the price of cut nails, the kind of nails getting out of use, have not increased at so great a rate. This table might have been extended to include

And such is the prosperity that has come to the farmer. Year by year it takes more and more of his products to buy the necessaries of life. He either has less money or he has less of the necessaries of life. But in order that the condition of the farmer may be shown in a way so simple that there can be no misunderstanding it, we will take the two staple articles of cotton and wheat and see how the relative prices of these two staples compare with the relative prices of staple articles which the farmer must purchase.

The relative price of cotton for the year 1901, as based upon the average price for the ten years from 1890 to 1899, was 111.1, and the relative price of wheat for that year was 95.7 Now let us compare these prices with the relative prices of the necessaries which the farmer bought. The relative price of salt in 1901 was 121.6; that of barb wire was 120.2; that of nails was 112.5; that of tin, from which the roof for his house and the utensils for his kitchen were made, was 132.7; that of building material was 116.7.

This is the Republican prosperity for the workingman and the farmer. The workingman is paid 8 per cent more for his labor and charged 26 per cent more for the necessaries of life. The farmer is paid less for his wheat, 6 per cent more for his cotton, and charged 28½ per cent more for what he has to buy.

The Hill Bill—It Increases Subsidiary Coinage, but Contracts the Volume of Legal-Tender Money—The Quantitative Theory of Money.

SPEECH

OF

HON. FRANCIS G. NEWLANDS,

OF NEVADA,

IN THE HOUSE OF REPRESENTATIVES,

Wednesday, February 19, 1902.

The House being in Committee of the Whole on the state of the Union, and having under consideration the bill (H. R. 11353) making appropriations for the current and contingent expenses of the Indian Department and for fulfilling treaty stipulations with various Indian tribes for the fiscal year ending June 30, 1903, and for other purposes—

Mr. NEWLANDS said:

Mr. CHAIRMAN: After the humorous and facetious debate which has taken place upon the German incident, I presume I can hardly expect to obtain the attention of the committee on a serious question. The gentleman from Connecticut [Mr. HILL], in a debate involving the operations of the Government for the benefit of the Indians, has seen fit to present to the consideration of the House a bill recently reported by the Committee on Coinage, Weights, and Measures involving a radical change in the currency of this country. Entertaining as I do views regarding the financial question diametrically opposed to his, I feel that it is incumbent upon me to accept his challenge and to refute, so far as I can, his reasoning.

The bill which has been reported by the Committee on Coinage first provides for the additional coinage of subsidiary coin; but that is merely a pretext for a radical change in our currency, for the bill then goes on to provide also that gold shall be given by the Treasurer of the United States in exchange for silver. Thus it is a process to make nearly $600,000,000 of silver represent merely promises to pay gold, just as paper promises, paper currency issued by the Government, would represent simply a promise to pay.

Now, I approve the recommendation of the committee so far as the increase of the subsidiary coin is concerned. It is evident that there is not sufficient subsidiary coinage in the country, only $92,000,000, I believe. The gentleman from connecticut [Mr. HILL] has shown that that is far below the average of subsidiary coinage in all European countries, and he estimates that the subsidiary coinage of the country could safely be doubled at the present time, and then we would only meet the existing demands of the country for fractional coin.

THE QUANTITATIVE THEORY.

I am glad to know that so far as the fractional currency is concerned the gentleman from Connecticut believes in the quantitative theory of money, for he insists upon it that there is a demand for what? For more fractional coins; and, so far as the fractional currency is concerned, he admits that mere quality will not do, but that quantity is essential; that as the population and wealth and industries of the country increase there must be a corresponding increase in the fractional currency of the country. His logic would be complete if he would go further and admit that this principle applies also to the entire volume of money; that as population and wealth increase, as the exchange of products and of property increases, there must be a corresponding increase in the number of units of the medium of exchange, and that for the purpose of moving these values in the exchanges of the country more units of money are required, just as more horses, more wagons, more cars are required for moving the products and exchanges between individuals and communities. But, while the gentleman from Connecticut admits the quantitative theory so far as the subsidiary coinage is concerned——

Mr. HILL. Will the gentleman from Nevada allow me an interruption?

Mr. NEWLANDS. Certainly.

Mr. HILL. I absolutely deny the quantitative theory. I admit what the gentleman has stated, that we need money as we need horses, carts, and wagons, as a matter of convenience, to move property, but the number of horses, cars, and wagons required to move the property has no relation to the value of the property which is moved.

Mr. SHAFROTH. Can the gentleman from Connecticut name a single political economist that does not indorse the quantitative theory?

Mr. NEWLANDS. Except the modern economists, under the inspiration of Wall street.

A MEMBER. And the gentleman from Connecticut. [Laughter.]

Mr. NEWLANDS. The gentleman admits that more horses, wagons, and cars are required to meet the increased demand of business, to meet the exchange of products, but he denies that the number of horses, wagons, or cars has any relation to the value of the property moved. In other words, we could destroy all the horses and mules, all the wagons and carts, all the railroad locomotives and cars that exist to-day, so as to prevent absolutely the moving of the grain and corn grown on the farm, the textile and iron and steel fabrics produced at the factory, and yet, according to the statement of the gentleman, the value of all these things, as well as of the farms and factories that produce them, would not be affected by the total stagnation of transportation. According to his contention, England's merchant marine, by which her goods are moved to distant purchasers, could be destroyed without affecting the value of her products or property. Indeed, the transportation machinery of the commerce of the world could be destroyed without affecting the values of the articles of commerce, or indeed of anything else. I shall not follow further an argument which can be so easily reduced to an absurdity, but shall content myself with adding that money is the railroad car that transfers ownership and value, and that any destruction or contraction of its volume will affect values just as the destruction or contraction of the machinery of commercial transportation

would affect them. The one paralyzes exchange just as the other paralyzes transportation.

But I was saying that while in words the gentleman denies the quantitative theory of money, in effect he admits it so far as the subsidiary coinage is concerned. He denies it so far as the ultimate and entire volume of money is concerned—the legal-tender money of the country—but he admits that more fractional coin is needed; that business requires it. Quantity, therefore, is essential as to a part of the money volume. It must, therefore, be essential as to the whole. Now, this very bill which proposes an enlargement of fractional currency involves a contraction of the legal-tender money. What is the legal-tender money of this country? Gold, of which we have about $1,100,000,000; greenbacks, of which we have over $300,000,000, and silver, of which we have about $600,000,000. The other so-called, but miscalled, money of our country is bank notes aggregating $300,000,000, stated in the Treasury reports as money, but really not money, mere promises to pay money, having no legal-tender quality, and not capable of being used as a part of the revenues of banks.

We have, then, a total money volume, including the bank notes, of about $2,400,000,000; in gold, one-half of that, eleven hundred millions, and in silver, about one-quarter of that, six hundred millions; and it is proposed for this six hundred millions that the Secretary of the Treasury shall be authorized to exchange gold for silver.

BILL MEANS RETIREMENT OF SILVER OR ENDLESS CHAIN.

I have no doubt that the gentleman will say that silver will not all be redeemed, but in viewing legislation we must have the powers given by the law under consideration, and we must assume that the law will be carried into operation and that every power given in it will be exercised. This act gives the Secretary of the Treasury the power to exchange gold for silver. Now, where will he get the gold? He will get it from the country at large, of course.

He will get it in the receipts of the Treasury by the sale of bonds. This gold will not come from some secret mine. It will not come from abroad. It will come from this country; and the $600,000,000 of gold that can be used in exchange for this silver will not be an increase of the money of this country. It will simply constitute a part of the existing stock. Six hundred million dollars, then, of silver for which gold is exchanged will either lie in the Treasury or will be paid out in the course of the expenditures of the Treasury. It will be in the power of the Secretary of the Treasury or the Government to keep it all there. It will be in their power to pay it out and then redeem it over and over again in gold, thus creating the "endless chain" of which we complained regarding the greenbacks. And then, doubtless there will be a demand for the absolute retirement of silver, just as there has been in the case of greenbacks. And a bill will then be offered providing for selling our silver as old junk, dumping it upon the markets of the world.

So, gentlemen, you will have to assume that in the ultimate reach and finish of this act there will be enough gold to take the place of silver for which gold is exchanged; and not only that, but that there will also be enough additional gold to keep pace with the increased demands of the population and business of this country.

THE GOLD SUPPLY.

Now where are we to get the gold? The gentleman alludes to the fact that the gold production has tremendously increased within the last six or seven years. That is true. In one year it reached nearly $300,000,000. For a period of twenty years or so—from 1873 on—the production was about one hundred millions annually. It has of late years been greatly increased, and this has saved the country from the effects of the Republican policy of contraction, for it is this tremendously increased production of gold that has supplied the reasonable enlargement of the money volume of this country absolutely demanded by the increase of its population and wealth. Does the gentleman from Connecticut know how much of the gold production of the world in 1896 has been absorbed by this country?

Mr. HILL. I assume that we have this burden now, and I ask the gentleman if there is any difference in governmental operation whether the Government pays out a dollar in gold for a greenback, or whether it takes in a dollar in silver in lieu of gold which would otherwise be paid for customs? The gentleman is arguing upon the supposition that we have not this burden. Yet the fact is that as long as the silver dollar is full legal tender and is receivable for customs we have the burden, and there is no difference between taking in silver for customs at one door in lieu of gold and paying out gold for a greenback at the other.

Mr. NEWLANDS. Then, if there is no difference, why make any change? I deny that there is any "burden" arising out of our present system. On the contrary, I claim that the existing system, which involves the use of silver as ultimate money of redemption, is of great benefit to the country.

Mr. HILL. That is just the difference between us. I do not want silver ever to be the ultimate money of redemption for Government bonds or other Government obligations under a gold-standard system.

Mr. NEWLANDS. Now, then, I understand exactly what the gentleman wants. He is intent upon the policy of contraction, which the Republican party has pursued uniformly since 1873, and the disastrous effects of which have only been averted by the liberality of nature and the industry of man in the increase of the gold supply. [Applause.]

FINANCIAL HISTORY OF REPUBLICAN PARTY.

Let me refer the gentleman to the history of his party in this connection. At the close of the civil war we had no specie in this country. The reports of the Secretary of the Treasury show that there was only $25,000,000 of gold and silver in the country at that time, and this condition of things existed until long after the civil war. We had issued many hundred million dollars of greenbacks, which constituted the currency of the North, with her 23,000,000 people. By the surrender at Appomattox we added 13,000,000 to our population—13,000,000 of people in the South without a currency. Their paper currency fell with the Confederacy and was worthless. They had a salubrious climate and a fertile soil. Their country abounded in every natural resource, but they lacked money, and this lack paralyzed exchanges of property and products. At a time, therefore, when the currency of the North—barely sufficient for its needs—was compelled to do duty over the restored South also; when a currency previously needed for the business of 23,000,000 people was suddenly called upon to meet the business requirements of 36,000,000 people, what did the Republican party do?

It commenced to retire the greenbacks, to destroy them by fire as they came into the Treasury of the United States, and it prevented the only natural and proper increase of the specie of this country which at that time was possible by passing an act preventing the coinage of silver, the product of our mines. And recollect that this was at the period of the lowest production of gold known in the history of the last half century. The world's production of gold was then only $100,000,000 annually, hardly sufficient to meet the demands of science, to meet the demands of the arts, to meet the demands of dentistry; and yet at that time the Republican party not only prevented the coinage of silver, which stood on a par with gold at that time throughout the civilized world, not only checked the use of a metal of which the country was the greatest producer, and of whose monetary use it stood in greatest need, but it also started in to destroy the existing paper money then in existence. At a time when the population of the country was nearly doubled it sought to halve the currency of the country.

FRANCE'S WISDOM.

Compare the wisdom of France after the Franco-German war, a few years later, with the idiocy of our Government after our civil war. France had to surrender to Germany about a billion of dollars, if my recollection is right, and the universal judgment was that this meant disaster to France; that the surrender of so much value by France to Germany meant a diminution in her money volume, a paralysis of her business, and a decrease of her exchanges. What did France do at that time? She realized that it was essential to maintain her money volume by some act of legislation, and she immediately put out a large amount of paper money, and this, taking the place of the gold which was given to Germany, sustained values, and France moved along with dignity and strength and power, and at the end of five years was in a stronger position than Germany herself.

She did not retire her money as a result of war, she issued more; she welcomed the product of the gold and silver mines of the world without discrimination; she gradually backed her paper money, dollar for dollar, by specie, gold and silver, while we, having largely increased our population, and being subjected to this additional strain upon our money volume, sought to reduce it, and instead of seeking to back our paper money dollar for dollar by resorting to the mines of the world, both gold and silver we closed our silver mines, denied our people access to them for the increase of their money volume, and sought to reduce the amount of our legal-tender paper money.

TWO FINANCIAL CYCLONES.

And so we passed through a financial cyclone from 1873 to 1878, during which time the property of the energetic and industrious, the real builders of the country, was swept into the coffers of the money lenders.

If you will look at the financial history of this country for the past fifty years you will find that there have been two periods—one the period 1873–1878, the other 1893–1897—in which the great

fortunes of the country have been concentrated through this financial process of reduction in the volume of the currency and the consequent fall in the value and price of property and the consequent increase in the purchasing power of money and in the control of bonds, mortgages, and promissory notes over property. The result was that during these two periods mortgages ripened into deeds, and creditors absorbed the property of enterprising and energetic debtors, and the wealth of the country drifted from the hands of the wealth producers into the possession and control of the wealth absorbers. In these two periods we will find the fruitful source of the great trusts, combinations, and monopolies, which constitute the menacing danger of our times.

The first period closed in 1878, and a change took place. Why? Because in that year we passed the Bland Act and we gave to this country $2,000,000 a month more of money by coining silver, and then we increased this to over $4,000,000 monthly by the Sherman Act, and as the money volume was increased, prices rose, exchanges were increased, and good times were restored. Then in 1893 a change took place. As a result of the gold-standard movement, as inaugurated by Germany and reenforced by the United States, when Austria was seeking the gold standard, and when she required $150,000,000 of gold to accomplish it, the money lenders of Europe found that America was a convenient place to get the gold through the medium of the greenbacks as the endless chain, and so our gold was withdrawn from us, and a contracting money volume inaugurated a period of low prices and general liquidation. And then, instead of emulating the wisdom of France either by issuing more paper money or coining more silver, of which we produced an abundance, we repealed the Sherman Act, stopped the coinage of silver, and aggravated the contraction of our money volume.

Our Republican friends said that confidence would be restored by this act, and that things would move on, exchanges would be promoted, and prosperity would follow. But for the period of three years or more this country passed through the valley of death and despair. How did the relief come? Through the policy which the gentleman favors—the policy of contraction? No; it came only through an expansion of the volume of money of this country, and that was accomplished in two ways. One was by the sale of our wheat product abroad in a period of famine throughout the world in the year 1897, which gave us immediately in one year one hundred and eighty millions more of money, and the other was by an increase in the production of gold throughout the world, of which the United States absorbed the most. Since 1893, out of the total coinage in the world of nearly eleven hundred millions of gold America has had nearly six hundred millions, and that shows the demand, the hunger for money in this country, for you all know the distribution theory of money; that so far as money is concerned it is the property of the world, and that each country has its share of the existing stock according to its necessity, and the very fact that the money came here proves that we needed it, and we have the result of it in the increased prosperity throughout the entire country. Six hundred millions out of eleven hundred millions! Think of that; this country having only 80,000,000 people, only one-twentieth of the population of the world, has during the last six years absorbed one-half of the world's coinage of gold, and it is this increased volume of money, the result of nature's bounty, not Republican policy, that has caused our present prosperity. Now, do you think the world is going to let you go on absorbing all this gold? Why, other countries will claim their distributive share. The gentleman himself is an advocate of a policy which will put the whole world on a gold standard, and if to-day we have eight and a half billions of both gold and silver in the world—four billions and a half say of gold and four billions of silver—and the rest currency, I ask the gentleman whether it is safe to blot out that four billion dollars of silver—pretty nearly one-half of the world's specie stock—and whether it can be done without creating an additional demand for gold? And then, as these other countries surrender to the gold standard, under the inspiration of the gentleman from Connecticut and his friends, will you not have an increased demand for gold from those countries, just as the increased demand came from Austria in 1893, a demand which put this country upon the shoals of bankruptcy. And if it is not wise to destroy all the silver money of the world, is it wise to start the work by retiring the silver money of the United States?

Now, the gentleman does not propose to let well enough alone. He and his friends have established the gold standard; they have provided that greenbacks shall be redeemed in gold; they have stopped the coinage of silver. He does not propose to let well enough alone; he proposes to enter upon these rapids which involve danger and disaster to the financial ship of this country——

Mr. HILL. Will the gentleman allow me to ask him a question?

Mr. NEWLANDS. Just a moment, please, until I get through with this. The Chair indicates that my time will expire in a minute, and I shall not have the opportunity of saying all that I would wish. I can only add that expansion of the money volume—and by expansion I do not mean inflation—has always brought this country prosperity, and contraction has always brought distress; and I appeal to the gentleman and his party not to disregard the lessons of our financial history. I appeal to them not to check the results of the present beneficence of nature in the increase of the gold supply by harsh legislation tending to contract our existing money volume, or to make any part of it inefficient in the exchanges of our business and commerce.

American Occupancy of the Philippine Islands.

SPEECH

OF

HON. WILLIAM A. JONES,

OF VIRGINIA,

IN THE HOUSE OF REPRESENTATIVES,

Thursday, June 19, 1902.

The House being in Committee of the Whole on the state of the Union, and having under consideration the bill (S. 2295) temporarily to provide for the administration of the affairs of civil government in the Philippine Islands, and for other purposes—

Mr. JONES of Virginia said:

Mr. CHAIRMAN: More than three years have now elapsed since the 4th day of February, 1899, the day upon which was fired that fateful shot which provoked the first collision between the American forces in the Philippine Islands and the insurgent troops under the command of Aguinaldo. From that memorable date, therefore, must we reckon the beginning of a war which the United States since then has been pitilessly waging for the purpose of establishing its sovereignty over the Philippine Archipelago.

It must not be forgotten, too, that at that time the treaty of peace between the United States and the Kingdom of Spain had not gone into effect. Indeed this outbreak occurred two days before the treaty was ratified by the United States Senate, and more than two months before the exchange of ratifications by the two Governments. It can not be contended, therefore, that on the 4th day of February, 1899, when hostilities were begun, the United States had any title to the Philippine Islands or any right to establish sovereignty over them.

At one time there may have been those who entertained honest doubt as to who provoked these hostilities. The distinguished chairman of the Committee on Insular Affairs [Mr. COOPER of Wisconsin], who has just addressed the House, has undertaken to reopen that question by reading a statement made before the Insular Affairs Committee by one Felipe Buencamino, a Filipino who was recently brought to this country, to the effect that the question of which side fired the first shot was still a doubtful one in the Philippine Islands. The gentleman took care to read only a part of the testimony of this witness, wholly omitting that portion in which he admitted that he himself believed that an American soldier had fired the shot. So that if the testimony of this renegade Filipino is worth anything, it discredits rather than sustains the contention of the gentleman.

But, Mr. Chairman, entirely aside from anything and everything this sorry witness may have testified to, I had supposed that it was generally if not universally, accepted in the United States, as well as in the Philippines, that the first shot, fired on February 4, 1899, was fired by a Nebraskan soldier, and that the chairman of the Committee on Insular Affairs knew that such had been established as a historical fact. General Otis himself admitted when testifying before the Philippine Committee of the Senate that an American soldier fired the shot which brought on the war in which from that day to this we have been engaged.

I regret that a gentleman for whom I have so much regard as I have for the chairman of the Insular Affairs Committee could have obtained his own consent to undertake to reopen this question, and to do so on the testimony of a witness who was forced to admit that he had no faith in the information upon which he had based that testimony, and that he himself entertained exactly the opposite opinion. So thoroughly, too, was he discredited during his examination before the Committee on Insular Affairs that I am satisfied there is not a member of that committee who has ever attached the slightest importance to any statement made by him. But who is this man Buencamino? Permit me to mention one or two instances in his somewhat remarkable and wavering career. During the insurrection of 1896, an insurrection which cost the patriot Rizal his life, Senor

Buencamino took sides with the murderers of Rizal and wore a Spanish uniform.

When, after the destruction of the Spanish fleet in Manila Bay, Aguinaldo landed at Cavite from an American ship and assembled around him an army of Filipinos, this man Buencamino, then a colonel in the service of Spain, went to his headquarters and besought him to desert the Americans, who had brought him back to his native land, and who had put arms and ammunition in the hands of his soldiers in order that they might cooperate with Dewey against the Spaniards. Besought Aguinaldo, whom he now denounces as a rebel, to basely desert Dewey and the Americans, and to espouse the cause of Spain, whose galling yoke the Filipino people had been unsuccessfully struggling for generations to cast off. Aguinaldo refused to listen to so base a proposition, and, when later on the traitor fell into his hands as a prisoner of war, he promptly swore eternal allegiance to the triumphant Filipino general, and so zealous a patriot did he become that he was given a place in Aguinaldo's cabinet and soon became one of the leading spirits of the Malolos government. When captured by the American forces, being convinced that the American arms would triumph, he quickly foreswore his country's cause, and we now find him holding the important office of civil service commissioner, with the attachment thereto of a fat salary of $3,500 in gold. And this is the only one of the thousands of educated Filipinos whom, it would seem, the Administration could induce to come to Washington to testify as to the beneficence of the policy which it is pursuing in the Philippine Archipelago. This man has not only transferred his political allegiance, but he has also changed his religion.

Mr. Chairman, I feel that I should apologize to the House for taking up so much of its valuable time in discussing the tergiversations of this individual, and I certainly should not have done so but for the fact that his testimony is the only scrap of evidence upon which my friend from Wisconsin relies to change the truth of history.

Mr. WILLIAMS of Illinois. Will my colleague forgive me for the suggestion which I want to make in connection with the statement of the chairman of the Insular Affairs Committee as to the preparation for hostilities? My colleague will remember that Buencamino stated that they were not preparing to begin hostilities, but were preparing to defend their liberties and independence, if subsequent events should show that the United States had in view an attack upon them; that they were not preparing for aggression at all.

Mr. JONES of Virginia. That is true, Mr. Chairman. I had intended to advert to that part of his testimony. It is unquestionably true that he sought by his testimony to create the impression that long before the breaking out of actual hostilities Aguinaldo had planned to attack Manila and massacre all the Americans in that city, but before he was through with the cross-examination to which he was subjected he retracted it all. He admitted in fact that Aguinaldo had no connection with any such plot. It was General Luna, he said, the bloodthirsty Luna, who planned this diabolical plot. But enough of Buencamino.

Mr. Chairman, I wish now to direct the attention of the House to some of the principal and, to my mind, most objectionable features of this bill for the so-called civil government of the Philippine Islands. I shall leave to others the discussion of the abstract question of our right to govern them at all. Should this bill unfortunately be enacted into law, the last estate of the poor Filipino under American rule will be infinitely worse than the first.

For nearly two years after American occupancy such authority as the United States Government had in the Philippine Islands was exercised through the commander in chief of our forces there as a military governor. That government was a pure and simple despotism. From September, 1900, down to the 4th of July, 1901, the commander in chief of our forces exercised executive power in the islands, whilst all legislative authority was vested by the President in a civil commission composed of five members, with Judge Taft as its president.

Subsequent to the 4th of July, 1901, and up to the present time the Taft Commission has continued to exercise the legislative functions with which it was clothed by the President of the United States, but the executive authority, prior to July 1, 1901, exclusively exercised by the military commander, is now divided between a civil and a military governor, between Governor Taft and the commander of our military forces.

So that to-day we have in the Philippines a military despotism and a civil autocracy, a hybrid and a dual government, the like of which can not be found in any civilized or uncivilized country beneath the skies, and for which the governmental history of the world affords no prototype. The Philippine Commission up to the 1st of last July was composed of five Americans. Its membership was then increased to eight by the addition of three Filipinos. It enacts all laws regulating the foreign and domestic commerce of the islands and creates courts of justice and prescribes their jurisdiction. In short, it exercises all the functions which usually inhere to a legislative assembly. It has, acting under Presidential authority, created four executive departments of government, just enough to provide a cabinet portfolio for each of the American commissioners, President Taft having already been made civil governor. The commissioners enjoy each a salary of $5,000. In addition to these salaries they have, in their legislative capacity, voted themselves salaries as follows:

Civil governor, Taft	$15,000
Secretary of finance and justice, Wright	10,000
Secretary of the interior, Worcester	10,000
Secretary of commerce and police, Ide	10,000
Secretary of public institutions, Moses	10,000

Mr. Chairman, I call attention to these things not so much for the purpose of criticising the action of the Philippine Commission in appointing its members to these positions, and fixing their salaries, as I do in order that the members of this House and the country may know something of the character of the government which has been established in the Philippine Islands under the sanction of a Presidential authority and power.

I submit, Mr. Chairman, that I am justified in saying that the prototype of this government is not to be found on the face of the globe. The colonial history of neither England, Spain, nor Holland furnishes an example.

Now, what sort of a government do our friends, the Republicans, propose to give the Filipinos? They propose to continue Governor Taft as civil governor. They propose to continue the Taft Commission; and they propose that it shall constitute one branch of a legislative assembly, the other of which shall be an elective or popular chamber. In the meantime, the Philippine Commission is to be empowered to appoint two commissioners, at a compensation of $7,000 each, to be paid out of the United States Treasury, to represent the Philippines here at Washington. When the legislative assembly shall have been organized, these commissioners are to be elected by that body.

The first section of this bill provides that the action of the President of the United States in creating the Philippine Commission, and in clothing it with the immense and autocratic powers which it exercises, is to be "approved, ratified, and confirmed." Will not some member, some Republican member, of the committee which reported this bill inform me, and inform the House, why it was supposed to be necessary to insert in it such a provision as this? If not necessary, then why is it here? Why are we asked to ratify and confirm the action of the President of the United States in appointing the Philippine Commission? If the President possesses the constitutional and legal authority to create this Commission, why is it that Congress is now asked to "ratify and confirm" his action?

But, Mr. Chairman, we are not only asked to "ratify and confirm" all that the President has done; we are asked to go further, to place upon that action the seal of our approval. To do this is not only to approve the action of the President, but also to approve all that has been done in the Philippine Islands in pursuance thereof.

Mr. Chairman, if our Republican friends could offer any good reason why Congress should ratify what the President has done in the Philippine Islands, I fail to understand how any self-respecting member of this House can support a measure which requires him to say that he gives his assent and approval to everything done through the Philippine Commission by and under Presidential authority in the Philippine Archipelago. The proposition is a monstrous one. Speaking from a personal knowledge, I can say that I know Republicans, a number of them, on this floor who have never approved of all that the President and the Taft Commission have done in the Philippines. Are they expected to violate their consciences and stultify themselves by voting for this bill?

Mr. CRUMPACKER. I desire to ask the gentleman from Virginia [Mr. JONES] whether in his opinion the order of the President appointing the Taft Commission, and the acts of that Commission, are valid under the Constitution and laws of the United States?

Mr. JONES of Virginia. My opinion is that the President acted without legal authority, that no warrant is to be found in the Federal Constitution for the appointment by the President of a civil commission vested with full legislative authority.

Mr. CRUMPACKER. Let me suggest to the gentleman that that is why we have to have them approved and confirmed by this bill, to satisfy such opinions as the gentleman from Virginia may entertain. We think they are valid.

Mr. JONES of Virginia. Well, my friend has gone a long way to satisfy my scruples. There are many other sections of this bill which he knows are equally obnoxious to me, and yet he has done nothing to satisfy me in regard to them. Will he kindly state to the House why this section was framed to remove objections of

mine, when the bill is filled with provisions which he knows can never meet my approval? [Applause and laughter on the Democratic side.]

Mr. CRUMPACKER. I give it up.

Mr. JONES of Virginia. Now, the gentleman is a distinguished and able lawyer, and I have great respect for his opinion on constitutional questions. He says he has no doubt as to the constitutionality of the acts of the President in creating this Commission. I would like him to point out to me a single line in the Constitution of the United States which authorizes the President to create a civil commission anywhere and clothe that Commission with legislative powers. The President, as Commander in Chief of the Army and Navy of the United States, is clothed with military power, and in the exercise of that power he appointed the commander in chief of our forces in the Philippine Islands military governor. So far I concede that his action was constitutional, but when he undertook to appoint a civil commission and to confer upon that Commission legislative powers, to be exercised over the lives, liberties, and property of 10,000,000 of people, he admits, when he asks Congress to ratify his acts, that he was without constitutional authority, and I do not believe that the gentleman from Indiana can show that he possessed any.

The Constitution of the United States vests all legislative power in the Congress of the United States. That grant of power is absolutely exclusive. No other branch of Government, save the Congress of the United States, can exercise legislative authority and power. But even could it be shown that the President possesses any such authority, what right would he have to delegate it to the Taft Commission? I am aware, of course, that since the Commission was appointed and vested by the President with this legislative power Congress has enacted the so-called Spooner resolution; but Governor Taft expressly disclaims having exercised any authority derived from this Congressional enactment.

Mr. WILLIAMS of Illinois. If it will not interrupt the gentleman, I would like to ask the gentleman from Indiana [Mr. CRUMPACKER] if he bases his statement that the acts of the Commission are valid upon the validity of the Spooner resolution or upon the war power?

Mr. CRUMPACKER. Upon both. Either one is sufficient justification. I think that the gentleman from Virginia has sufficiently demonstrated that there is a difference of opinion respecting the validity of the acts of this Commission, and that if Congress proposes to stand by the Commission it ought to pass just exactly this provision, so as to put that question at rest.

Mr. JONES of Virginia. Mr. Chairman, I desire to repeat that Governor Taft expressly stated when here that the Commission of which he is the president had taken no action for which he believed it derived its authority from the Spooner resolution. He distinctly and most emphatically stated that the authority which the Commission had exercised was, in his opinion, derived from the military power conferred by the Constitution upon the President of the United States. But, Mr. Chairman, there is another well-understood and well-recognized principle of our Government which has been most flagrantly violated in the creation of this Commission, an offense we are now asked to condone—yes, even to justify and approve. It is very true that this principle is not embodied in the Constitution in express words; it was not necessary that it should be. That the legislative, judicial, and executive branches of this Government are separate and distinct, and are to be so kept, is axiomatic. In the Taft Commission all of these powers are blended, mixed, and consolidated—a violation of the spirit of the Constitution. If therefore, Mr. Chairman, this section is to be written in the Philippine legislation of this Congress, it must be done by the Republican majority. No Democrat can or will support such a proposition as this.

But we are told that the Democratic party must be held equally responsible with the Republican party for whatever has been done in the Philippines, because, forsooth, a handful of Democratic Senators voted with the Republican majority to ratify the Spanish treaty. How unmanly is this! To seek to saddle upon the Democratic party some portion of the responsibility and odium which attaches to the Republican Administration because a few Democrats were induced by the insincere declarations of Republican Senators to vote for ratification is both cowardly and hypocritical. Were not these Democrats assured by leading Republicans that ratification did not mean permanent retention of the islands and a colonial policy?

Mr. DINSMORE. I want to suggest that at least one of these Democrats has been voting with the Republicans pretty much ever since.

Mr. JONES of Virginia. Mr. Chairman, these are some of my objections to the first section of this bill. It goes even further than I have pointed out. It provides not only that we shall approve all that the President and the Taft Commission have done in the past, but all that they may hereafter do. This is even too much to require of a Republican, it seems to me.

Mr. Chairman, the colonial government provided for in this bill is not to go into effect at once. A census is first to be taken. How long will be required to enumerate the inhabitants of fifteen hundred or two thousand islands, many of which to this hour have never been trod by the foot of a living white man, I leave to each member of the House to decide for himself. Thus far no man seems to be able to guess within 500 the number of the islands. After the census has been taken, and there is a state of general and complete peace throughout the civilized islands, which, by the way, are the only islands where there has been any resistance to American occupancy, the President is required to issue his proclamation, and then an election is to be held to choose members of the popular branch of the legislative assembly. In the meantime the Taft Commission is to continue to govern the islands, and we are asked to approve, ratify, and confirm in advance anything and everything it may do—just or unjust, legal or illegal.

Mr. Chairman, I shall not follow the example set me by the gentleman who opened the debate in support of this bill. He discussed almost everything in the heaven above, the earth beneath, or the water under the earth, except the provisions of the bill. His tributes to Lincoln, Grant, McKinley and the martyr-patriot Rizal were indeed beautiful, and his strictures upon the declarations of Democratic platforms, resurrected after the lapse of a third of a century, were most entertaining. I am only surprised that he had nothing handsome to say of his star witness, Buencamino. Perhaps the knowledge that the record which he had in his hand disclosed the fact that Buencamino had deserted the Spanish, doubly betrayed his countrymen, and then sold himself for a lucrative office under the American Government, restrained him. [Loud applause on the Democratic side.] I shall endeavor to confine my remarks to the subject before the House.

Mr. SNODGRASS. Will my friend allow me to suggest that to approve all the acts of the Philippine Commission would amount to an act of general amnesty, and that we could not then call to account hereafter any civil authority in the Philippine Islands who might be guilty of wrongdoing?

Mr. JONES of Virginia. That may be the effect of this proposed legislation. There may some day be those in the Philippine Islands who will stand as much in need of amnesty as did Rathbone and Neely for their sins against God and Cuba. But I want to say in this connection, lest I may forget it later, that I entertain a very high regard for the civil governor of the Philippine Islands. I have not the pleasure of an acquaintance with the other members of that Commission, but I do not believe that President McKinley could have selected an abler or more conscientious man than Governor Taft to exercise the despotic powers conferred upon him and those associated with him. But I would not be willing to intrust to George Washington himself, were he alive, such vast and arbitrary powers as have been lodged in the Commission of which Governor Taft is the head.

There are many other sections of this bill to which I most strenuously object. One of them is that which confers upon the Philippine government the broadest and most sweeping authority to grant franchises. Authority to exercise the right of eminent domain and to grant every conceivable character of franchises is conferred by this bill. It might be regarded as not unreasonable to permit the incorporation of companies to build railroads, but permission to grant such corporations large tracts of valuable public lands in aid of their construction should surely be withheld.

Mr. Chairman, I also enter my solemn protest against the provisions of this bill which authorize the sale of the public agricultural lands in the Philippines. They permit corporations engaged in agriculture to purchase these lands in tracts not exceeding 5,000 acres. The Porto Rican organic law provides that such corporations shall hold not to exceed 500 acres of land. When that act was before Congress, the chairman of the Committee on Insular Affairs stood with me against permitting land-grabbing corporations to buy up in large bodies land which we both then thought should be reserved for homesteads for the people of Porto Rico. The Senate bill contains no provision which permits the sale of these public lands, and therefore, in my judgment, is infinitely to be preferred to this bill. Of all the bad provisions of the House bill those relating to the sale and distribution of the public lands are the most inexcusable. These lands are the birthright of the Filipinos, their right to own and enjoy them is God-given, and to authorize the Commission, or any other government which you may impose upon them at the point of the bayonet, to dispose of them to foreign corporations is, call it by any name you choose, spoliation and robbery.

Mr. Chairman, the provisions which relate to the forest lands are very skillfully drawn and very cunningly devised. Although the bill contains no provision which permits the sale of forest lands as such, those lands can nevertheless be sold; for if, in the opinion of the Commission, the forest lands are more valuable

for agricultural purposes than they are as timber lands, it has only to so declare and they can be sold.

Another most important provision of this bill is the power which it confers upon the Commission to purchase the lands owned by the friars. There are three different orders of friars in the Philippines—the Dominicans, the Augustinians, and the Recoletos—which together own some 420,000 acres of the most valuable farming and other lands in the Philippines. The Commission is empowered to issue and sell bonds, 5 per cent gold bonds, by which to raise the money to acquire these lands.

Governor Taft is to-day in Rome seeking to negotiate with the authorities of the Roman Catholic Church for the purchase of these lands. I see by to-day's papers that the deal has been consummated. So that the bonds are not only to bear an unusually high rate of interest, but they are to be exempt from all taxation in the Philippine Islands, as well as from all taxation in the United States, and in any State of the United States.

Mr. HILL. Has not that provision been changed? I know it was in the original bill, but I have not been able to find it in the new bill.

Mr. JONES of Virginia. I think not. I think I can refer the gentleman to the paragraph. Other similar bonds are authorized for the improvement of Manila and other municipalities throughout the archipelago.

Mr. GAINES of Tennessee. Has it not been disclosed in the hearings before your committee that the friars have sold their lands to the corporations?

Mr. JONES of Virginia. That was testified to, and it is a fact that in order to facilitate this deal the friars have put all their lands in the hands of some syndicate or corporation. What I particularly desire that the House shall know is this: These friar lands are the finest in the Philippine Islands. Most of them lie near or adjacent to the city of Manila. The Commission has authority to issue bonds and buy them, and after their purchase they are to be held and to be treated as other public lands. In other words, every acre of these friar lands, when acquired by the Commission, can be disposed of as it is provided that other public lands can be sold, and every acre can then, and probably will be, purchased by foreign corporations in blocks of 5,000 acres, save that, in limited quantities, those now occupied and which the tenant, out of his poverty, may find the means with which to purchase. You do not need to be told how wretched and deplorable is the condition of the poor Filipino farmers to-day. Their fields have been devastated, their property of every description destroyed, and in very many instances their homes reduced to ashes. Tell me what chance will they have to acquire homesteads when what for years have been their homes are put upon the market.

Mr. Chairman, when the House adjourned yesterday afternoon, I was discussing that section of the Philippine bill which relates to the purchase of the lands which are held by certain religious orders known as the friars. I stated in that connection that the bill provided that the Philippine Commission should have the power to sell bonds for the purpose of raising funds with which to purchase these friars' lands, and that such bonds would be exempt from all taxation. I find upon examining the bill that the provision as to the exemption of the bonds from taxation has been slightly modified since I last examined it. It is now as follows:

> Said bonds shall be exempt from the payment of all taxes or duties of the government of said islands or of any local authority therein or the Government of the United States.

That is a modification of the provision of the bill as it was first drawn, and I desire, in order that my statement shall be entirely accurate, to make this correction.

Mr. Chairman, I spoke on yesterday of the condition to which the Filipinos have been reduced. All authorities agree that many of them are bordering upon starvation. Dr. Tavero, one of the three native members of the Taft Commission, says in a recent article in the North American Review:

> As a result of the war agriculture has been wiped out and the public wealth has been diminished to such an extent that movable and immovable property has been reduced to ashes.

Now, Mr. Chairman, it is gravely proposed to sell every acre of the public agricultural lands in the Philippine Islands, including those to be acquired from the friars, when it must be apparent to every man who knows anything about the pitiable conditions which exist in the Philippine Islands that practically all of them will go into the hands of foreign corporations. To state this proposition should be sufficient to damn it in the estimation of fair-minded people. We are told that the ownership of these lands by the friars has been the source of unending trouble in the Philippines, and that it is of the highest importance that the Government should own them. Does anybody imagine that the people of the Philippine Islands will become more reconciled when they see these lands which have hitherto been the cause of so much disturbance transferred from the friars to foreign corporate land grabbers?

I shall not stop to discuss the coinage systems of the House and Senate bills. The House bill provides for the introduction into the Philippines of the gold standard. The Senate bill authorizes the continuance there of the silver standard. The Philippines have long been used to a silver currency, and to put them suddenly upon a gold standard will inevitably result in financial disturbances and business disasters. Such has been the experience of India, and such will be the experience of the Philippines if this experiment is tried. I do not believe that it will be. I predict that the Senate will force the House to recede from this proposition. But before leaving this subject let me advert briefly to another provision relating to the coinage, which, by some sort of unexplained coincidence, appears in both the House and Senate bills. I would like to ask the gentleman from Wisconsin in charge of this measure why it is that the silver pesos are to have inscribed upon them a device symbolizing the sovereignty of the United States? May I ask him if he thinks to thus inscribe the coinage of the Philippines comports very well with his declaration made on yesterday that it was the purpose of the Republican party to "establish an invincible young republic" in those far-away islands—a republic whose inhabitants would be endowed with the "inalienable rights of man?" For one I attach no importance to such high-sounding phrases. The gentleman's declarations can not be made to square with his acts. How does he reconcile the two?

Mr. Chairman, I will consume no more of the time of the House in discussing the many features of this bill, important though they be. In my opinion, it is far better that the Filipinos should continue for a season to suffer the ills they now bear than to have fastened upon them indefinitely such a measure of civil government as that we are now considering. The present government, whether it be legal or illegal, civil or military in character, or a mixture of both, has never exercised, nor claimed the right to exercise, authority to dispose of all the valuable franchise rights, to strip the forests of their valuable timbers, and to sell the millions of acres of rich public agricultural lands in the Philippines. That much at least the present hybrid government can not do.

I have said nothing about the mining features of the bill. They cover a good many pages. Whether the rights of the Philippine people are properly guarded or not I can not say, for this subject is largely technical in its character, and I freely confess that I am not an expert in matters which relate to mining and mining laws. I am very skeptical, too, as to the existence in paying quantities of valuable mineral deposits in the Philippines. If they are there, the Spaniards never discovered them.

Mr. Chairman, the inhabitants of the Philippine Islands have been described as savages and barbarians, a people utterly incapable of self-government. Nothing could possibly be further from the truth. There are, it has been variously estimated, from eight to ten millions of people in these islands. Governor Taft places the number at 9,000,000 and classifies them as follows: 6,500,000 Christians, 1,500,000 Moros or Mohammedans, and 1,000,000 non-Christians, known as hill tribes. The Christian or civilized Filipinos inhabit Luzon and the Visayan group of islands. The Moros dwell principally in the Sulu Archipelago and the southern part of Mindanao. The hill tribes are scattered over the mountainous districts of quite a number of islands.

In what I shall say as to the capacity of the Filipino for self-government I must be understood as referring to the Christian and civilized tribes who are, generally speaking, Tagals and Visayans. Those who would disparage the Filipino, and deny to him the capacity for self-government, on the other hand, point to the non-Christian and slave-holding Moros, the mentally and physically weak Negritos, and the savage Igorrotes of Bontoc. Of the Moros it may be said that Spain never succeeded in bringing them under her subjection, and the United States so far has not attempted to interfere with their religion, their institutions of slavery and polygamy, or their freedom. The Negritos do not exceed in number 25,000 and are a fast vanishing race, while the Igorrotes may be likened to the American Indians.

Mr. Chairman, the Filipinos, the Christianized Filipinos, are not only, in my opinion, capable of governing themselves, but they are capable of a very high degree of intellectual development. As a people they have ever exhibited an eagerness to acquire learning. It may not be known to some members of this House that thirty-five years before the first institution of higher education was established in America the Jesuits erected at Manila the University of St. Joseph, and that eighteen years later the Dominican order established the University of St. Thomas in the same city, seventeen years before the founding of any college in America. The erection of these institutions of higher learning was soon followed by the establishment of local schools throughout the archipelago, until, to borrow the language of a well-informed writer upon this subject, a perfect network of parochial schools was spread over the islands.

So liberally was the University of St. Joseph's patronized—

hundreds of students flocking to it from all parts of the archipelago—that it soon became necessary to enlarge its capacity, and so numerous and generous became its endowments that in a short time it was enabled to dispense with all fees and charges. In 1896 there was at Manila a university with 1,681 matriculates and as many as nine other colleges scattered throughout the islands. Beside these there was a college of agriculture, a nautical school, a superior school of painting, sculpture, and engraving, and a military academy, not to speak of 67 high-grade latin schools located in various cities and towns. Most writers place the number of those who can read and write at 70 per cent of the whole adult population, and at least one historian fixes the number as high as 90 per cent. How many States of our Union can exhibit a record equal to this?

What, Mr. Chairman, is the testimony of distinguished Americans, those who have by reason of a residence in the Philippine Islands and long intercourse with their people, had exceptional opportunities for forming opinions as to their capacity and acquirements. As long ago as June 27, 1898, Admiral Dewey telegraphed the Secretary of the Navy:

In my opinion, these people are far superior in their intelligence and more capable of self-government than the natives of Cuba, and I am familiar with both races.

In the July following General Anderson wrote:

We have heretofore underrated the natives. They are not ignorant, savage tribes, but have a civilization of their own.

In the latter part of the year 1898 two observant and very intelligent young naval officers attached to Dewey's fleet—Paymaster W. B. Wilcox and R. L. Sargent—made a tour of inspection through the island of Luzon, covering in their travels a distance of more than 600 miles. The most interesting report submitted by them contains much valuable information bearing upon the life, customs, manners, and intellectual acquirements of the inhabitants with whom they came into contact. I will read a few extracts from this report:

Of Bayombong, the chief town of Nueva Viscaya province;

"We were invited to the home of Señor Arista, a gentleman in every sense, well educated, a lawyer, and principal member of the junta. He was one of the finest type of the Filipino man. His house was well furnished, he had a good library of rare books, a drawing-room decorated with artistic taste, a dining-room supplied with choice linen and the best of china, and a garden filled with beautiful flowers—even a Jersey cow."

Of Ilagan, the capital of Isabella province, noted for its fine tobacco:

"Our arrival was welcomed by manifestations of the warmest hospitality. We were taken to the house of the acting presidente, a man of wealth. The principal officials made calls and were followed by many of their wives, finely dressed in gowns of silk and pina that would have excited the envy of the women of our country. A lady played on the piano, and the Filipino national hymn was sung by a small boy and the whole company joined in the chorus.

"Several fiestas were held in our honor. The first was a baile (evening dance), at which the social set were present and the local band produced its choicest selections. The hall was decorated. A good dinner preceded the dance. The hall was filled with attractively dressed women in silks and pina. The men were attired in low-cut black coats, white linen shirts, collars, and ties, some wearing patent-leather shoes.

"I felt a regret at not having my dress suit with me to be more in keeping with my surroundings. My partner, the daughter of our host, waltzed exquisitely. Her costume was pina silk, with long train embroidered in flowers, a waist of delicate pink, white kid slippers and gloves. She wore large and beautiful diamonds. Other women challenged my admiration when I considered that this locality was deep in the interior of a country where taste and culture was supposed to be unknown.

"At midnight supper was spread. Some fifty young ladies were seated at the table, whose furnishings were in good form in every respect.

One evening a play at the theater was arranged. The actors were amateurs. It was put on the stage in proper costumes and commendably acted, with music interspersed.

A steam launch was sent to take us down the Rio Grande de Cagayan to Aparri.

APARRI.

Aparri, with a population of 20,000, has many handsome houses. News had been received from Hongkong papers that the Senators of the United States favored the independence of the islands, with an American protectorate. Colonel Tirano considered this information sufficiently reliable to justify him in regarding Philippine independence assured and warfare in the island at an end.

He proceeded to relinquish the military command he held over the provinces and to place this power in the hands of a civil officer elected by the people. On the day following our arrival the ceremony occurred which solemnizes the transfer of authority in the province of Cagayan.

The presidentes locales of all the towns in the province were present at the ceremony. The elected officer, called Jefe Provincial, thanked the disciplined military forces and their colonel for the service rendered the province, and assured them that the work they had begun would be perpetuated by the people, when every man, woman, and child stood ready to take up arms and defend their newly won liberty and resist with the last drop of blood the attempt of any nation whatever to bring them back to their former state of dependence.

He was followed by the three officers who constituted the provincial government, the heads of the three departments of justice, police, and internal revenue. Every town in this province has the same organization.

VIGAN, PROVINCE OF ILOCOS SUR.

The general appearance is that of a prosperous town, with important commercial transactions. We were quartered at the Palacio with 18 military officers, all very young, as is usual in the Filipino army. They were inquisitive, but pleasant enough, and willing to render any assistance. The natives are most temperate, although a sort of liquor—cana dulce—is manufactured there in large quantities and shipped mostly to Manila.

SANTA MARIA, SAME PROVINCE.

I noticed at this place, as in others, how well dressed the people were. One never sees a man, however humble, in tattered, torn, or shabby clothes.

CANDON.

Candon is a handsome town, symmetrically laid out, and, after Vigan, was the finest we had visited.

I shall now read a passage from the report of the first Philippine Commission, of which Dr. J. G. Schurman, the distinguished president of Cornell University, was the head, and also of which Dr. Worcester, now a member of the Taft Commission, was a member:

The educated Filipinos, though constituting a minority, are far more numerous than is generally supposed, and are scattered all over the archipelago; and the Commission desires to bear the strongest testimony to the high range of their intelligence, and not only to their intellectual training, but also to their social refinement, as well as to the grace and charm of their personal character. These educated Filipinos, in a word, are the equals of the men one meets in similar vocations—law, medicine, business, etc.—in Europe or America. It is scarcely an exaggeration to say that these picked Filipinos will be of infinite value to the United States in the work of establishing and maintaining civil government throughout the archipelago. As leaders of the people they must be the chief agents in securing their people's loyal obedience to the new government, to which, therefore, the dictates of policy, as well as plain common sense and justice, require us to secure their own cordial attachment.

I now read from an article published in Gunton's Magazine, in the April number of this year, from the pen of Dr. Schurman. It clearly indicates that the opinion which the writer formed as to the Filipinos when among them has undergone no change:

But whatever be done with them (the Mahommedans) the civilized and Christianized democracy of Luzon and the Visayans desire independence. They are fairly entitled to it, and united as they now are, I think they might very soon be intrusted with it. In their educated men, as thorough gentlemen as one meets in Europe or America, this democracy of 6,500,000 Christians has its foreordained leaders.

But perhaps my Republican friends may attach more importance to the words of President McKinley, for I have observed a tendency on their part of late to shield themselves behind his name whenever the Administration's Philippine policy is attacked. This is what he said in his message at the opening of the second session of the Fifty-sixth Congress.

Mr. COOPER of Wisconsin. Will the gentleman permit an interruption?

Mr. JONES of Virginia. Yes.

Mr. COOPER of Wisconsin. In reply to what the gentleman has said——

Mr. JONES of Virginia. No, not in reply; I am willing to permit the gentleman to ask a question.

Mr. COOPER of Wisconsin. Will the gentleman permit me to read four or five lines from the report of the Philippine Commission—the Schurman Commission—from which the gentleman has been reading?

Mr. JONES of Virginia. Mr. Chairman, the gentleman from Wisconsin read extensively from this report on yesterday, and he has permission under the rules to incorporate anything more he may wish in his remarks when printed. I prefer that he would not inject into my speech information which he may desire to furnish the House. He objected to my making any statement when he was speaking, although once, after making a personal allusion to me, he was fair enough to permit me to interrupt him with a question. I can not permit him in my time to read from any report for the purpose of injecting matter into my speech.

Mr. COOPER of Wisconsin. Will the gentleman permit a question?

Mr. JONES of Virginia. I will.

Mr. COOPER of Wisconsin. Does the gentleman not know that on page 113 of that report of the Schurman Commission they say that it is impossible now to say even approximately——

Mr. JONES of Virginia. Oh, Mr. Chairman, I object to the gentleman's getting this statement in under the guise of asking me a question. Such a course is not in keeping with his high character.

The CHAIRMAN. The gentleman from Virginia declines to yield.

Mr. JONES of Virginia. Mr. Chairman, when interrupted I was about to read from a message of President McKinley. This is President McKinley's testimony as to the capacity of the Filipinos to learn and their desire for knowledge:

The Filipinos are quick to learn and to profit by knowledge. He would be rash who, with the teachings of contemporaneous history in view, would fix a limit to the degree of culture and advancement yet within the reach of these people if our duty toward them be faithfully performed.

The language which President McKinley employed is broad enough to cover all Filipinos, non-Christians as well as Christians.

Señor Sixto Lopez, an educated native Filipino, now a resident of Boston, has contributed a valuable article on this subject, from which I now read:

The number of those who can read and write in the Spanish or the native language and have an elementary knowledge of arithmetic, etc., has been estimated by various authorities at from 60 to 80 per cent of the Christian population. My own belief is that probably 75 per cent can so read and write. Of these about 30 per cent can speak Spanish; some, of course, indifferently, but many as though it were their mother tongue.

Of course, until a proper census has been taken it is difficult to accurately determine the extent of literacy in the Philippines. The difficulty presses

with equal force upon friend and opponent, but there are other sources of information by which a fairly accurate idea of the truth is obtainable.

Prior to the Spanish occupation elementary education was probably more extensive in the Philippines than in any other European country at that time. Dr. de Morga, the first governor-general, in his book published in 1609, tells how the Filipinos had a written language of their own, and declares that "there were very few who could not write well and correctly." Notwithstanding Spanish indifference and monastic opposition, the Filipinos have opened elementary schools in almost every village. They have also founded high schools and university colleges throughout the archipelago, and a university, two large normal schools for male and female teachers, and five large schools for women in Manila. In a recent article in the Outlook, Mr. Atkinson, superintendent of public instruction in the Philippines, states that "Since the coming of the Americans private schools have sprung up like mushrooms." Mr. Atkinson is wrong in implying that these schools are a result of American activity, for in most cases they formerly existed but had been closed by the war. The Schurman Commission declares that "A system of free schools for the people has been an important element in every Philippine programme of reforms."

General MacArthur holds that "this almost universal aspiration for education should appeal strongly to American sympathy." The president of the Royal University of Manila, one of the bitterest opponents of the Filipinos, had to admit in his evidence before the Schurman Commission that, all things considered, "education in this country is very far advanced, both in the primary grades and in the university grades;" while in an article submitted to the Senate committee when Governor Taft was giving his evidence and stated by Mr. Root to have been "compiled in the Division of Insular Affairs from standard works and the records of the Department, supplemented by the personal experience of returning officers," it is stated that "most of them (Filipinos), both men and women, can read and write."

But, Mr. Chairman, there is even stronger evidence than this to support my contention that the Filipinos are capable of governing themselves and ought to be permitted to do so. In January, 1902, the total number of employees under the Taft government in the Philippines was 5,006, and of these 3,134 were native Filipinos. Many of these Filipino officeholders occupy the most exalted and responsible positions. Three of the eight commissioners, who to-day exercise full and complete legislative authority in all the organized provinces of the islands, are native Filipinos. Three of the seven members of the supreme court—Ceyatano S. Arellano, Florentino Torres, and Victorino Mapa—are native Filipinos. Arellano, the chief justice of the court, is admittedly the most learned and ablest of them all. In such high estimation is Señor Felipe Buencamino held by the Taft Commission, that he is a civil-service commissioner. Twenty-three out of 35 provincial governors are native Filipinos. Every fiscal or prosecuting attorney in the 35 provinces is a native Filipino, as is every provincial secretary. There are more than 2,000 native teachers and more than 6,000 natives employed in the various municipal police forces.

In most of the provinces the people elect their governors, and the bill which we are now considering divides the Christianized islands into two districts and empowers the qualified voters in those districts to elect each a commissioner to the Congress of the United States. It also provides for an elective popular branch of a legislative assembly. If this does not convince any reasonable man that the Filipinos are capable of self-government, it at least demonstrates that the Taft Commission has done much to illustrate the truth of the proposition which I have laid down.

Mr. CRUMPACKER. Will the gentleman permit me a question?

Mr. JONES of Virginia. Yes.

Mr. CRUMPACKER. Does the gentleman think Buencamino is capable of self-government from the character of the testimony which he gave?

Mr. JONES of Virginia. I think that if Buencamino's patriotism and moral character were equal to his intellectual attainments he would be a very great man. [Applause and laughter on the Democratic side.] And in this connection I may say that I do not think that the very best selection was made when Señor Buencamino was chosen as a member of the civil service commission. He is not, in my opinion, a fit representative of the Filipino people.

Mr. Chairman, I would not be entirely frank with the House if I omitted to state that, while 3,134 of the 5,006 civil employees in the Philippines are natives, and only 1,872 carpet-baggers, the aggregate of the salaries paid the native officeholders is $1,450,054, as against $2,338,420 received by the Americans.

Mr. TAWNEY. Does the statement disclose whether they are paid out of the Philippine treasury or out of the treasury of the United States?

Mr. JONES of Virginia. They are paid, I think, though the statement does not disclose the fact, out of the Philippine treasury. Though fewer in number, the Americans receive nearly double the amount of salaries paid to native officeholders. Some Americans hold two offices and draw two salaries.

Mr. TAWNEY. And no doubt their services are worth twice as much too.

Mr. DINSMORE. I would ask my friend whether this report discloses whether any funds have been paid out of this same Philippine treasury for the purpose of promoting administrative legislation in the United States?

Mr. JONES of Virginia. Oh, no.

Mr. BARTLETT. Mr. Chairman, may I say that that appears now to be solely confined to the island of Cuba.

Mr. DINSMORE. We may have developments later.

Mr. JONES of Virginia. Mr. Chairman, our Republican friends take unto themselves great credit for having sent 1,200 American teachers to the Philippines. Is it too much to ask that some Republican who will follow me shall explain to the House how American teachers, ignorant of the language, the religion, the social customs, the national character, and racial life of the Filipino people, are going to manage to teach their children to read and speak the English language? The Filipinos had an abundance of native teachers, and they had schools and schoolhouses, too, before we destroyed them. What a shame to require them, out of their poverty, to pay to a horde of American teachers salaries which average more than six times as much as those paid their own teachers.

Ancient as well as modern history teaches the unwisdom of governmental interference with the language of a people. Such interference has never been promotive of national contentment or unity. This has been the experience of Russia and of Germany with the Poles. England, failing to profit by the example of these autocracies, forced the English language upon Ireland at the point of the bayonet. Although Quebec has for a century and a half been under English rule, French to-day is as universally spoken upon its streets as upon the boulevards of Paris. There never was a more stupendous blunder than this attempt of a Republican Administration to force our language upon the people of the Philippines, and the experiment, in my humble judgment, will prove, and ought to prove, a dismal failure. For more than three centuries Spain held dominion over the Philippines, and the Roman Catholic Church sent its representatives into parts of the islands penetrated by no other white men, and yet we are told that not more than 5 per cent of the people speak the Spanish language.

Mr. Chairman, I think it is unquestionably true that many of those who favor permanent American occupancy of the Philippine Islands are actuated by purely selfish motives. They view this great question entirely from the standpoint of self-interest. The idea that to hold and exploit them may prove in some way profitable is the mainspring of the imperialistic tendencies of some people, and accounts for their views as to what they call trade expansion—a reaching out after the markets of the world. Their idea is expressed in the hackneyed but false phrase that trade follows the flag. It would be far more accurate to say trade follows the price list.

Let us see if trade has followed the American flag to the Philippines. The total value of all the dutiable imports of those islands during the calendar year ending December 31, 1901, was $30,162,471 and of the exports $24,503,352. Of these amounts there was imported from the United States $3,534,255 and exported to the United States $4,546,292. So that it appears that although "Old Glory" is planted more or less firmly in the Philippines, the value of our trade with them is scarcely more than one-tenth of their total foreign commerce. But this is not the worst of it. The exports to the United States decreased 27 per cent last year as compared with those of the previous year, and the imports from the United Kingdom, from Germany, from France, and from the British East Indies increased in a much greater proportion than did those from the United States.

Mr. SLAYDEN. Mr. Chairman——

Mr. JONES of Virginia. Before my friend asks his question he will permit me to make one other observation. It is this: Of the three and a half million dollars' worth of the products of the United States which were imported by the Filipinos, $897,855 worth consisted of whisky, brandy, and malt liquors. In other words, one-fourth in value of all we sold the Filipinos last year, or, more accurately speaking, sold our soldiers stationed there, consisted of whisky, brandy, and beer. Of mowers and reapers they bought of American manufacture $78 worth, and of plows and cultivators $301 worth. These figures may be relied upon as entirely accurate. I have them directly from the War Department. They not only show how obediently trade follows the flag, but they express in dollars and cents what we have had in return for the hundreds of millions we have expended in treasure, and the oceans of blood with which we have drenched the fairest lands of the Orient.

Mr. SLAYDEN. Has my friend estimated the possible profit to the few merchants in this country who share in that export and import trade, and has he contrasted with that insignificant profit the enormous cost to the taxpayers of this country of getting that trade?

Mr. JONES of Virginia. No; I have not. It may be possible to compute the difference in money between what we have expended and what we have received, but the standard has not yet been erected by which shall be measured the losses we have sustained in lives and in human blood.

Mr. BALL of Texas. I will ask the gentleman from Virginia if the imports included in the statement do not also include the money and supplies that were sent over there for our troops and other American officials?

Mr. JONES of Virginia. No; I think not. This statement includes only such products as are dutiable.

Mr. WILLIAMS of Illinois. I have seen some statement that not only the provisions but the coin sent to the American army is included in the estimates furnished by the War Department.

Mr. JONES of Virginia. That may possibly be true; but I think not.

Is it contended, Mr. Chairman, that the acquisition and permanent possession of these islands will give to the people of the United States any trade advantages not enjoyed by other commercial nations? I think not. If we hold them we must maintain there the "open-door" policy, just as Great Britain maintains it in India. We can not do otherwise. We are not pursuing there a different policy now.

Mr. Chairman, will it be claimed that our occupancy of these islands is a military necessity? That these possessions will prove a source of weakness rather than of strength is, in my opinion, a proposition too obvious to admit of question. If we need a naval base in the Far East, we can easily secure naval and coaling stations and terminals for submarine cables for the mere asking. We have only to follow the course which we pursued toward Cuba—withdraw our troops and pull down the flag, which President Roosevelt tells us must "stay put," no matter what the cost in money, in blood, and in national dishonor.

But, Mr. Chairman, we are told that there are millions of acres of public lands in these islands. Yes; this is true; there are 68,000,000 acres, and many of them are covered with valuable timber. I admit that in the estimation of some people this is a very strong argument in favor of their permanent retention. But, after all has been said that can be said on this score, the fact remains that the United States can not hold them other than in trust for the inhabitants of the islands. If sold, the proceeds must go into the treasury of the Philippines, and not into that of the United States, and the citizens of Spain will be as free to purchase them when sold as will be those of our own country.

Mr. Chairman, we are not yet reduced to the extremity of crossing the Pacific Ocean in search of new and unoccupied lands for homesteads for American citizens. There are still undisposed of in the United States 592,523,677 acres of vacant public lands exclusive of the 367,983,506 acres in Alaska. This is one-third in area of all the land in the United States, and more than eight times that of all the land, public and private, in the Philippine Islands. It is true, of course, that much of this is what is known as arid land, but Congress is now entering upon a policy of irrigation, the result of which will be to reclaim a large portion of it. We do not need more territory, for there is room enough on the American Continent for our progress and advancement; opportunities enough to satisfy the ambitions and gratify the aspirations of every American. Our forests are well nigh inexhaustible, and our hidden wealth almost untouched and inestimable.

Mr. Chairman, we may never know, indeed we will never know, what the Republican colonial policy has cost. Senator HOAR recently placed the money cost at $600,000,000. The total cost of all the wars in which this country has engaged from and including the Revolutionary war, and down to the war between the States, is less than half this enormous sum. The total cost of the seven years' war of the Revolution was but $135,000,000, less, I believe, than we have expended on the average every year we have been in the Philippines. I am not unmindful of the fact that the morning papers contain a statement, given out by the Secretary of War, which places our military expenditures in the Philippines at $170,000,000. I have had no opportunity to examine it and I therefore do not know what items of expenditure are included and what omitted. But I have no doubt but that every item that possibly could have been excluded has been excluded in order to reduce the amount to the lowest possible minimum sum.

Why this statement is given out at this particular time, upon the eve of the adjournment of Congress, and when we are in the very midst of the consideration of this important measure, I can only guess. I know that the Secretary of War is the rankest of partisans, and for one I am unwilling to accept his figures without an opportunity afforded me for examination and comparison. During the progress of the war in the Philippines Congress has appropriated sums vastly exceeding in the aggregate $170,000,000 for the support of the military arm of the service, and I suggest that it might be well enough for the Secretary of War to issue a supplemental statement showing how the unaccounted-for residue has been expended. We have not, I think, been engaged in any other war during this period. Certainly, for a part of the period this war has been in progress we have had as many as 70,000 soldiers in the Philippines at one time, and the cost alone of maintaining them there would be $105,000,000 a year. The Secretary of War, of course, does not include in his statement any amount expended under the Navy Department.

Mr. Chairman, it is as difficult to estimate the lives that have been sacrificed in this unholy war as it is to compute the money cost. But I think I am within moderation when I say that the American losses reach as high as 10,000, and certainly I am within just bounds when I place those of the Filipinos at not less than ten times that number. It has been said, and so far as I know the statement has gone unchallenged, that of the population of the province of Batangas alone, 300,000, one-third have been either killed or have died from starvation and disease. It has also been said that if the Filipinos who have yielded up their lives in this war, struggling for an independent national existence, were laid side by side the green mounds covering them would stretch in unbroken sequence over a distance equal to that from the Great Falls of the Potomac River to where that majestic stream wastes itself away in the Chesapeake Bay.

No wonder, Mr. Chairman, that Sagasta, the prime minister of Spain, exclaimed upon the signing of the treaty of Paris, "Now is Spain avenged."

Not so many lives as these were lost in the Revolutionary war, the war of 1812, the Mexican war, and in all of the Indian wars in which we have engaged combined.

There were engaged on both sides in the Franco-Prussian war 2,700,000 soldiers, and yet the losses of France were less than have been those of the Philippine war; Germany's losses did not equal those of France.

When, Mr. Chairman, reference is made to the methods which have been employed in the prosecution of the war in the Philippines, the Administration and its apologists at once take refuge behind the Army. Any criticism of the conduct of officers who have disgraced their uniforms, any reference to well-established atrocities, to inhuman and cruel barbarities practiced by our soldiers in the Philippines, is denounced as unpatriotic, and described as wholesale slander of the Army.

Those who have read the voluminous and convincing testimony bearing on this subject will not be deceived by such subterfuges and false clamor. Even the President of the United States, Mr. Roosevelt, in violation of every rule of ordinary propriety and good taste, recently took advantage of a memorial occasion to indulge in this kind of twaddle. Mr. Roosevelt should not forget that he has been somewhat of a critic himself. He has not hesitated, when it suited his purpose, to play the critic's rôle. Just now, however, it is his ox that is being gored. I recently read an article written by him entitled "Perry's Victory on Lake Erie," in which, after undertaking to rob that great naval hero of the glory which until then all men with one accord had awarded him, he says, apparently in extenuation of his course:

> There are always men who consider it unpatriotic to tell the truth if the truth is not very flattering.

I commend this to our doughty President. The truth as to what has been done in the Philippines, and which is now being excused and defended, is certainly not "very flattering" to the Republican Administration, and therefore, according to Mr. Roosevelt, it is unpatriotic in those who tell it.

Mr. STEELE. Does the gentleman admit that the President referred only to criticism of the Army and not to civil affairs?

Mr. JONES of Virginis. Mr. Roosevelt referred in this memorial address to criticisms of officers and soldiers of the army in the Philippines. It is true that his criticism of Perry was applied to a great naval hero. Does the gentleman make a distinction between criticisms of the officers of the Army and criticisms of naval heroes? In the light of recent occurrences I had almost come to think that there must be such a distinction in the minds of some people. I knew, of course, that in certain quarters it was not regarded as a heinous offense to criticise Dewey and Schley. Nothing, however, must be said of the conduct of Generals Smith and Bell, of Waller, of Day, of Arnold, of Edwards, and of hundreds of others, some of whom have even confessed to responsibility for a participation in the most diabolical atrocities, the most cruel and infernal tortures. [Applause on the Democratic side.]

Mr. STEELE. Suppose that all that has been said about these gentlemen whose names you have mentioned were true, it would not justify the wholesale criticism of the Army.

Mr. WILLIAMS of Illinois. There has been no such wholesale criticism.

Mr. STEELE. I think I have heard it.

Mr. WILLIAMS of Illinois. The military officers themselves have said more hard things to produce that impression than any member of Congress.

Mr. JONES of Virginia. Mr. Chairman, I well recall that some time since a distinguished Republican, a gentleman for whom I have a high personal regard, and one whose ability is universally conceded, a leader upon this floor, when asked what he had to say

in extenuation of General Smith's conduct of the campaign in the island of Samar, said that he did not believe he ever issued the infamous order attributed to him. His words were: "I do not believe he ever issued any such order."

Now that it has been conclusively established that General Smith did give the order to kill all the inhabitants, men and women and children over 10 years of age, declaring that the more killed the better pleased he would be; and that he did direct that the island of Samar should be made a "howling wilderness," it would be interesting to have the gentleman give us his opinion as to that order.

General Smith has been court-martialed for giving this order, and, although the findings of the court have not been made public, it is generally understood that he has been acquitted. The papers are now in the hands of the President for review, it is said, and there, with all their damning evidence, they are likely to remain until after the approaching Congressional elections. I will now read the charge upon which General Smith was tried, as published in the Washington Post of two days ago:

In that Brig. Gen. Jacob H. Smith, United States Army, commanding general of the Sixth Separate Brigade, Division of the Philippines, did give instructions in regard to the conduct of hostilities in the island of Samar, P. I., to his subordinate officer, Maj. L. W. T. Waller, United States Marine Corps, the said Major Waller being under his command and commanding at the time a subterritorial district in the island of Samar, P. I., in language and words to wit: "I want no prisoners" (meaning thereby that giving of quarter was not desired or required), and "I wish you to kill and burn. The more you kill and burn the better you will please me," and "the interior of Samar must be made a howling wilderness," and did give further instructions to said Major Waller that he, General Smith, wanted all persons killed who were capable of bearing arms, and did, in reply to a question by the said Major Waller, asking for an age limit, designate the age limit at 10 years.

This charge is about as clear and specific as language could make it.

Mr. VANDIVER. Is it not true that he afterwards admitted that charge?

Mr. JONES of Virginia. Yes; that is true. I will now read the statement made by his counsel before the court-martial:

The accused desires to simplify this case as much as possible, and admits that he was commanding general of the Sixth Separate Brigade, Division of the Philippines; that Major Waller was one of his subordinate officers, commanding a subterritorial district, and that he did give him personal instructions relating to hostiles under arms in the field, and he did instruct him not to burden himself with prisoners, of which General Smith already had so many that the efficiency of his command was impaired, and tell him that he wanted him to kill and burn in the interior and hostile country; and did further instruct him that the interior of Samar must be made a howling wilderness; and did further instruct him that he wanted all persons killed who were capable of bearing arms and were actively engaged in hostilities; and that he did designate the age limit at 10 years, as boys of that age were actively engaged in hostilities against the United States authorities, and were equally dangerous as an enemy as those of more mature age.

I would now like to ask my friend from Iowa [Mr. HEPBURN] if he still entertains any doubt as to the genuineness of this order, and if not, I would be glad to know what he thinks of it.

But, as I have said, the court-martial acquitted General Smith. Indeed, so far as I am informed, no officer or soldier has up to this moment been punished for the torture or even the murder of a Filipino.

Mr. Chairman, were I to characterize the findings of the court-martial in General Smith's case as a travesty upon justice, I should, I presume, render myself amenable to the imputation of having slandered the court and Army.

Major Waller and Lieutenant Day, the officers who obeyed so literally the orders of General Smith, have also been tried and acquitted; but to the everlasting honor of General Chaffee, be it said, he disapproved of the findings. We shall know what President Roosevelt thinks of them when the fall elections are over. Let me read the comments upon General Chaffee's disapproval which I find in the Outlook of May 31. I am unable to procure the disapproval order:

General Chaffee, as the reviewing authority in the case of the courts-martial of Major Waller and Lieutenant Day, has expressed disapproval of part of the findings in both cases. General Chaffee holds that the court was justified in relieving Major Waller from the charge of murder in ordering the killing of the stevedores of his party who had refused to aid the party in getting food and had otherwise misconducted themselves. This approval is based on the fact that Major Waller was ill with fever, was suffering acute anguish of body and mind, and was not in a condition to weigh reasons justly when he received telephone messages from other officers advising that the men be killed. On the other hand, General Chaffee holds that the full exculpation of Major Waller and Lieutenant Day was a miscarriage of justice and opposed to the evidence; that the killing of the men was more in the nature of a lawful retaliation than justifiable warfare, and that the affair was "one of the most regrettable incidents in the annals of the military service of the United States."

Mr. Chairman, had I the time and the disposition I might dwell for hours upon the subject of the atrocities which have been perpetrated in the Philippines without exhausting the subject, but I have neither. The water cure, once regarded as a most cruel form of torture, our Republican friends now tell us has been discovered to be a specific for the terrible dengue fever, a malady which is carrying off many of the natives. It is true that some of the victims still regard the remedy as worse than the disease, but then may we not attribute that to their ignorance? So I shall say nothing about the far-famed "water cure." I do not believe, however, that the most ardent Republican, the most zealous supporter of the Administration, will contend that the war in the Philippines has been conducted on the highest ethical plane. Perhaps those responsible soothe their consciences with the reflection that after all "the extremest severity is in the end the greatest humanity." Those who subscribe to this rule of military ethics may be justified in declaring that the course of our soldiers in the Philippines has been marked by justice, moderation, and humanity. I fear the verdict of history will be otherwise.

Mr. Chairman, the history of the Democratic party shows that it is not opposed to expansion. The United States has expanded from an area of 827,844 square miles in 1782 to nearly 3,600,000. But the expansion has been upon this hemisphere, has been over land—a steady and ever advancing annexation of contiguous territory. It has embraced territory inhabited by scattered communities of white people, speaking the same language and dwelling upon the same continent, and it has been with a view always to giving them ultimately the rights and privileges of that citizenship enjoyed by ourselves. This was true of the Louisiana purchase of 1803, which carried us to the shores of the Pacific, and it was equally true of that of the Floridas, which in 1824 placed us upon the Gulf of Mexico.

It was true of the annexation of Texas in 1845, the Mexican cession of 1848, and the Gadsden purchase of 1853. This was Democratic expansion, an expansion which has made this Republic the richest, the most powerful, and the greatest on the face of the globe. The Democratic party is opposed now, as it ever has been throughout its glorious history, to that expansion which is a misnomer, which always has been and always will be, call it by what name you please, imperialism. It is opposed to expanding beyond the seas; opposed to incorporating into the United States noncontiguous territory inhabited by densely crowded alien peoples, differing from us in race, origin, color, language, religion, customs, and civilization. It is opposed to holding in subjection and to governing as colonies any people who aspire to be and who are entitled to be free and independent. It believes that the policy which the Republican party has for the past three years pursued toward the people of the Philippine Islands has been "unjust and cruel to them and injurious and dishonoring to the American people," and therefore those who profess its principles, and who here represent it, are opposed to a continuance of this policy, even in a modified form, believing it to be radically and inherently wrong.

President McKinley declared in a speech delivered in the city of Chicago that "the war with Spain was undertaken, not that the United States should increase its territory, but that oppression at our very doors should be stopped. This noble sentiment," he said, "must continue to animate us, and we must give to the world the full demonstration of the sincerity of our purpose." How far from the realization of that demonstration which President McKinley in this speech commended you to make is the measure for which nearly every Republican in this House is now prepared to vote, I leave to you, my Republican friends, to say.

But a few days ago President Roosevelt sent to this House a message in which he urged upon the Congress to do what he regarded as an act of "plain duty" toward Cuba. In that message he said, "There are few brighter pages in American history than the page which tells of our dealing with Cuba during the past four years."

What, Mr. Chairman, may I ask, shall be written on that page of American history which is to tell of our dealings with the Philippine Islands? Shall the story of our treatment of the Cuban be written in characters of living light, whilst that of our conduct to the Filipino is inscribed in dark letters of crimson blood? Does President Roosevelt wish it understood that we conferred independence upon Cuba because we had proclaimed to the nations of the world we were not fighting for the acquisition of territory and because we had pledged our national faith and honor that we would, upon the termination of the war with Spain, redeem that promise, and not because we wished to see Cuba free and to be the author of her independence? Can it be true, I ask, that Cuba owes her freedom to the compelling force, the constraining influence, of the Teller resolution rather than to the noble generosity of the American people? If not, where then is to be found a reason for the difference which has marked our course in the one case and in the other? Why have we given independence to the Cuban and denied it to the Filipino? Why have we erected a "young republic" in the Occident and denied self-government and independent national existence to a people struggling to be free in the Orient?

Mr. Chairman, every consideration of self-interest as well as of honor would seem to impel our relinquishment of any rights of sovereignty we may have over the people of the Philippine

Islands. There are 800,000,000 of people bordering upon and facing the Indian and Pacific oceans—more than one-half of all the inhabitants of the world. To remain permanently in the Orient means that we are to be drawn inevitably into the vortex of Asiatic-Pacific rivalries. Russia has come overland, and is now firmly planted upon the northern Pacific, where she has acquired a splendid base for sea power. With America occupying the Philippine Archipelago, the greatest autocracy and the greatest democracy upon the globe will face each other in the Far East. China is a mine of dynamite, the explosion of which must some day shake the very earth to its foundations. Is it not, then, Mr. Chairman, the part of wisdom to call a halt now and here? Does not that solicitude which a wise, a prudent, a patriotic, and an enlightened and Christian government should always feel for the people whose safety and well-being are committed to its care dictate that we withdraw now and forever from the Philippine Islands? [Loud and continued applause on the Democratic side.]

Isthmian Canal.

SPEECH

OF

HON. WILLIAM B. ALLISON,

OF IOWA,

IN THE SENATE OF THE UNITED STATES,

Thursday, June 19, 1902.

The Senate having under consideration the bill (H. R. 3110) to provide for the construction of a canal connecting the waters of the Atlantic and Pacific oceans—

Mr. ALLISON said:

Mr. PRESIDENT: My occupations have been such during the debate on the subject of an isthmian canal that I have not been able to listen to all that has been said. I had not myself expected to say anything upon the subject until this morning, when I learned that in my absence it was suggested that I desired to speak. That suggestion having been made, I wish to say only a few words to briefly express some reasons why I expect to vote for the substitute which has been proposed by the Senator from Wisconsin [Mr. SPOONER] and reported by the minority of the committee.

The question of an isthmian canal is not a new one to the people of our country nor is it a new one to me. The subject has been almost constantly before this body since 1883, and it is therefore a familiar topic in our records since that period.

I agree with Senators that there is a general public sentiment in our country in favor of an isthmian canal. I believe there is a general desire in the country that the Pacific and Atlantic oceans should be thus united. That desire has grown from year to year, and there has also grown a feeling, arising from various considerations and discussions of the subject, that the United States Government should itself construct the canal, maintain it, control it, and protect it.

I was in the Senate in 1883 and 1884 when this question was widely discussed in the Senate in executive session upon a treaty made by President Arthur with Nicaragua and Costa Rica, which proposed that a canal by way of Lake Nicaragua should be constructed by the Government of the United States. Nicaragua then alienated sovereignty over a portion of its territory for that purpose. There was a strong sentiment in favor of this treaty, because of the fact that the Panama route had been selected by France two or three years before, and a charter granted to a French company to build a canal on the Panama route as a sea-level canal.

The United States, by this action of France, was cut off from any consideration of the Panama route, concession on this route having been granted to the French company by the United States of Colombia.

Our people turned their attention to the Nicaragua route, which had been explored and partially surveyed by our Navy. A company had been formed to construct the Nicaragua Canal, but with the Panama project set on foot those in control of our Government believed that private enterprise was unequal to the task of construction, and the Frelinghuysen treaty, so called, was made and sent to the Senate. It provided for Government control and construction in the most complete way, but it was then argued with great force that the Clayton-Bulwer treaty stood in the way, and the treaty failed in the winter of 1885, and in the spring of that year President Cleveland withdrew the treaty for reasons already quoted in this debate, and which I need not recur to now. The Frelinghuysen treaty assumed that the Clayton-Bulwer treaty had been abrogated by nonuser and by the action of Great Britain, and that with this condition we were free to take such action as we thought wise, with the concurrence of Nicaragua and Costa Rica, and that Great Britain having violated important provisions of the treaty we were at liberty to, because of their action, declare its abrogation.

The arguments upon that question at that time convinced me that it was a wise thing for us to open the canal to all nations upon exact terms of equality with ourselves, but since that time it has been strongly urged that we should control the canal when we are at war with any nation, so far as to prevent its use by any such nation for war vessels or war purposes, though free for commerce.

Mr. President, it was because the French Government and the French people had control of the Panama Canal, and the general belief that a sea-level canal was impracticable, that the attention of Congress and the American people directed their attention to the Nicaragua route as the most feasible and practicable for the commerce of all nations, and especially valuable to connect our own Atlantic and Pacific commerce.

So that it is true, as stated by the Senator from Montana and other Senators, that the attention of the American people for many years was chiefly directed to the construction of a canal, increased from year to year by the fact that it was believed that the French company could not or would not complete its canal, though retaining the concession of the Panama route, and it was not until two or three years ago that it was thought possible for the United States to consider the Panama route as possible for us to acquire. This possibility took root in the river and harbor bill three years ago, when an appropriation of $1,000,000 was made to explore all routes and ascertain the terms upon which we could secure control of the Panama concession. I have followed for many years the lead of the honorable Senator from Alabama in his project respecting the Nicaragua Canal. I have favored it on every occasion and at every period when it has been before the Senate. I have voted, I believe, for every bill and every proposition connected with the subject which has been presented by the Senator from Alabama, though sometimes with great misgivings as to details. I did so believing that this measure was of such transcendent importance to the people of the United States that whatever defects might appear in the legislation proposed could afterwards be corrected by supplemental legislation.

Mr. President, it was not until the Commission known as the Ludlow Commission was sent to Nicaragua some three years ago that anything occurred to disturb my mind as to the feasibility and practicability of the Nicaragua route. Before that time there had really been no absolute examination of the Nicaragua route that could be called a detailed survey, giving all the information necessary to be had before beginning such a work. These earlier surveys were superficial, as from the nature of things they necessarily must have been. It was proposed by these earlier surveys that the canal should be one suitable for the navigation of that period. I believe it was designed that the greatest depth of the canal should be from 20 to 28 feet. I may be mistaken as to the number of feet provided for in the last bill which was passed here two or three years ago. Now it is proposed that we shall build a canal 35 feet in depth; a canal deep enough and wide enough and with a sufficient volume of water to float the largest vessel upon the ocean at this time.

So, Mr. President, the problem of construction as respects many of the conditions surrounding the question of an isthmian canal is entirely different from what it was when these discussions were had hitherto. The problem as now presented is one which involves necessarily a much larger sum of money than has been involved in any project suggested prior to this time, and also presents more difficult engineering problems because of the increased depth proposed.

Mr. President, we are now confronted and brought face to face with a proposition to expend a minimum sum of $180,000,000, which, in my belief, will be increased to more than $200,000,000, which must be raised either by taxation upon the people of the United States, trusting to reimbursement from the income and profits of the canal, or we are bound to create a bonded indebtedness for the construction of the canal of about $200,000,000, in round numbers.

For one I believe that we should borrow money and construct the canal upon the credit of the United States. If we do that, we must provide in some way for the payment of the interest and for the liquidation of the principal at some future time, which we all hope can be realized from tolls arising from the use of the canal. So, Mr. President, we are confronted now with an expenditure to be presently made by the Government of the United States of $200,000,000. Therefore, it is important, if we are to expend this sum upon the credit of the United States, that we should do the best we can respecting the route that shall be selected for this purpose.

I have reached my conclusion on this subject from the reports of the Walker Commission, so called—the Commission which was

sent down there by authority of Congress with power to expend a million dollars. The members of that Commission did not merely walk over those routes and take cursory surface views of them, but they made a close and careful examination as to the situation of all routes, as to the feasibility of constructing a canal upon either of them, as to the cost of doing so, and all the surrounding necessary incidents of construction.

From my knowledge of the men who were appointed upon that Commission, I am able to say that it was wisely selected by President McKinley. Five of them are eminent engineers in our country, men whose reputations have been won largely in conducting successfully difficult engineering work. Why did we make this large appropriation for these examinations? Why did we send those men down there for that purpose? It was because the two Houses of Congress were not in possession of information which would enable them to intelligently and carefully decide upon the question now up to us, namely, the best location of the canal, taking into view all the problems involved. That is the view, as I understand, that we had in sending that Commission there. We had had other surveys; but Congress was not satisfied with them, because they were not in sufficient detail to justify us in deciding upon the best route and proceeding with the work; and therefore we sent this Commission there to examine all routes and report to us the best.

That Commission made not only one report, but, as has been truthfully said, they made two reports and three reports. I read the second report, I think it is, of the Commission in which they recommended the adoption of the Nicaragua route. I was convinced that, although the Commission reported in favor of the Nicaragua route at that time, they believed that if the Panama route could be obtained on reasonable terms, that route should be selected. So it never occurred to me that the Commission in any way reversed themselves in making their final report in favor of the Panama route. They do say in all their reports that both of these lines are feasible lines for the construction of a canal, as I have no doubt they are.

I shall not repeat the reasons given by them for their conclusion, because of their having been so often repeated in this debate; but they are so cogent that it seems to me that it is almost impossible for us under the circumstances to disregard their expert opinion and to be guided only by our own imperfect judgment and information. In saying this I perhaps ought to state that I speak only for myself.

I know that there are members of this Senate, notably the Senator from Alabama [Mr. MORGAN], who have given great attention to this subject for more than twenty years, and who have opinions well and maturely formed upon investigation, I have no doubt, which enable them to overcome the judgment of this expert Commission and to vote for the Nicaragua Canal, notwithstanding that expert opinion unanimously expressed by the Commission; with my own imperfect knowledge of the subject, therefore I must follow the judgment of these experts rather than follow my previous views, reached at a time when the situation was wholly different from what it now is, when the Panama Canal was not supposed to be within the reach of our consideration.

But, Mr. President, in addition to all this, as I have walked in and out of this Chamber since this debate began I have been all the time confronted with the map which hangs in full view on the wall of this Chamber, which was put here I do not know by what authority, but it is an outline map of these routes. I have imagined myself on the Isthmus with both of these canals completed, and having an opportunity to take passage upon a ship going through one or the other, or having a cargo of freight to transport from one ocean to the other, or running or navigating a ship intended for such journey; and I have wondered which route I would take under any of these circumstances. Assuming now that both of these lines are feasible; assuming that there are no engineering difficulties in the way of either—the engineers agree that there is no difficulty in the Bohio dam on the Panama route or in the Conchuda dam on the Nicaragua route—assuming that there is an ample flow of water provided by the erection of either dam flowing into the canal or through either lake, easily controlled by the erection of engineering works; it seems to me I would take that route which would carry me through in the shortest time and having the fewest locks to impede my progress, and the least elevation to overcome and the shortest distance to sail or steam. On the Panama route I would find that the time required would be twelve hours, the distance 49 miles, the maximum elevation to overcome on the Atlantic side from 82 to 85 feet and on the Pacific side from 75 to 90 feet, depending upon the fluctuation of the tides. I would find two locks on the Atlantic side to reach the maximum elevation and three locks on the Pacific side to reach the ocean, and more than half the whole distance on the level of the sea. This is what I would find on the Panama route, all traversed between sunrise and sunset on the same day. But suppose I were only a passenger and should want to see the beautiful Lake of Nicaragua and the other natural scenery along the Nicaragua route, and should decide to take that route. I would be told that if I took that route I would be on the way two nights and three days, or practically sixty to sixty-eight hours; that I would sail along on that route on a sea level for 15 or 20 miles, or whatever the distance may be, and then I would come in contact with a lock that would lift up the vessel on which I was sailing 40 feet, and I would have to sail at this elevation for a few miles, when I would encounter another elevation, and a few miles farther still another, and a few miles farther still another, reaching an elevation in all, by means of these four locks, of from 104 to 110 feet before entering San Juan River and Lake, the latter created by the Conchuda dam, an engineering work erected at great cost and to some extent an experiment, as stated by the engineers.

Mr. HARRIS. Will the Senator pardon me for making a suggestion to him?

Mr. ALLISON. Certainly; I shall be glad to have any suggestion the Senator desires to make, for I am speaking in a general way only, and shall be glad to have any information he can furnish.

Mr. HARRIS. The Senator was speaking of his personal safety, and I feel concerned in that.

Mr. ALLISON. I know the Senator does.

Mr. HARRIS. I want to suggest to the Senator that the only locks of 45 feet are on the Panama route—two on each side 45 feet high.

Mr. ALLISON. I did not say 45 feet; I said 40 feet.

Mr. HARRIS. But the Senator speaks of the Conchuda dam. The locks there are only 36 feet high.

Mr. ALLISON. I understand. I have no concern as to either route in respect to safety, but I am very much obliged to the Senator for his kindly regard for me. I do not suppose I shall have this alternative presented to me, but I may have the pleasure some time in the future of passing over either one or the other of these canals.

But what I was about to call attention to is the fact that this 40-foot dam, or 36-foot dam, or whatever it may be, is the first rise on the Nicaragua Canal, as I understand it. There are 65 or 70 feet more to be surmounted before the lake is reached, which is to be formed by means of the Conchuda dam.

Those who understand this question tell me that if I should, in such a voyage, reach the level of the Conchuda dam the first day I should be very lucky. That is about 50 miles. When I got into the San Juan River and lake, formed as it is chiefly, I believe, by means of the San Juan River that flows out of Lake Nicaragua, I would still have 50 miles more to go before I reached Lake Nicaragua, or 100 miles in all, before reaching Lake Nicaragua. I understand there is a canal to be built on the east shore of the lake on account of the shallow water, which would require me to journey 15 or 16 miles more before reaching the part of Lake Nicaragua having an ample depth of water to properly float the vessel in which I should sail, and that this would constitute another day's journey, and that another night would be spent on the lake or at its eastern entrance. Then I would sail out into that lake the next day, and would reach the Pacific Ocean after resting two nights and sailing three days—as it would be impracticable to continue the voyage during nighttime. I do not personally know about this; I am merely referring to facts which I have learned from the reports, which are valuable and reliable, in my judgment, as to the time that will be required to go through the Nicaragua Canal.

Mr. President, I can not help believing that whether it be the case of a sailing vessel or a steamship, when its master or owner gets into the Caribbean Sea, and has a choice of the route which, for the time being, is to carry upon the waters of the canal the value of that ship, the value of its cargo, whether it be great or small, and the valuable lives of the passengers on board, he will prefer to get into the open sea at the earliest possible moment and to spend as little time as is possible in either of these canals. So, in my judgment, although the distance from one point to another has been carefully calculated, showing that the location of a canal is preferred in certain quarters on the Pacific coast and on the Atlantic by the Nicaragua route, I can not help believing that, taking the situation of these two canals respecting their length and the conditions surrounding them, it would be regarded as the safest and wisest by all those who navigate ships to take the shorter route. That map has been to me since this debate began an absolute object lesson.

When I have turned to the reports and statements regarding these two routes and found that both are feasible and both available, but the Nicaragua route costing for maintenance more than a million dollars per annum in excess of the Panama route; although I read the interesting remarks of my honorable friend who sits near me [Mr. MORGAN], showing that these calculations were extravagant as to both routes, and I rather agree with him as to that—from the very nature of things, whether the cost of

maintenance is $1,000,000 or $2,000,000 for the longer route, the cost will be correspondingly less on the shorter route. Therefore, whether their statements are extravagant or not, it is perfectly apparent to me that, in the long run and range of these two canals, the advantage as to the cost of maintenance will be immensely in favor of a canal on the Panama route.

There is another thing I wish to say, because I am giving reasons that shall govern me in my vote rather than presenting arguments to sustain these reasons.

I have been impressed very much with the suggestions of the Senator from West Virginia [Mr. SCOTT] about the tunnel proposed for the San Blas route so called, and I was reenforced somewhat by listening to the venerable Senator from Massachusetts [Mr. HOAR], who seems to be impressed with it, whereby a sea-level canal could be constructed and used without the intervention of locks. I had dismissed that route from my mind because all of the members of the Commission agree, as I understand it, that the San Blas route, or whatever it may be called—the sea-level route south of Panama—from a financial view is not to be considered. But there is also this advantage as respects the Panama route, and it governs me somewhat. That is, that in the long reach of time it is also susceptible of being converted into a sea-level canal. I shall probably pass from these shores in the ordinary course of events probably before either canal is constructed by means of locks.

Mr. MITCHELL. I hope not.

Mr. ALLISON. This probability of a sea-level canal is far in the future, but the time may come when commerce and its interests will justify this great expenditure. The engineers who have examined the route concur in saying that it is a practicable thing to accomplish, depending only upon the amount of money to be expended.

Mr. President, these are the general impressions made upon my mind and some of the considerations which lead me to the support of the Panama route, and I am sorry that they have not met with the approval of my venerable friend the Senator from Alabama [Mr. MORGAN], with whom and by whom I have stood for all these years for a canal. I have supported and sustained him in every measure that he has brought forward for this purpose. I am sorry I can not follow him now in support of the Nicaragua project when I have the alternative thus presented. But I can not in a matter of this importance, involving $200,000,000, set up my feeble judgment and my information, or lack of information, against the information and the judgment of the men who compose the Commission, at the head of which is Admiral Walker, an officer in the Navy, who has been in the sunlight of public observation for more than forty years, who has acquitted himself with the highest intelligence and sagacity in every place that he has filled, whose integrity is unquestioned, and the belief in whose sound judgment is universal.

I happen to know Mr. Morison, another of the engineers, and I know him so well that I believe that he is one of the most eminent engineers not only in this country, but in all countries. So of Mr. Noble. I know those two engineers well. Of course I know General Ernst and Professor Haupt, but not so well. They are recognized as eminent and capable in their profession. We have many of us served in this Senate with Judge Pasco, and know how patient and thorough and intelligent he is in the examination of any subject.

Mr. President, it seems to me it would be folly on my part to stand up and proclaim by my vote, or by any criticism I might make, that I know more about this subject than any of these men, or all of them—and they all agree. A prudent man who builds a house employs an architect, however sound his own judgment or however intelligent he may be. He is to put his money in it, and in doing so he desires to secure the best attainable results at the place where he is to dwell. I would not come into the Senate with a proposition to build a locomotive on my own judgment, although there are some Senators here, at least one, who probably could go very far in that direction. So in this great matter, in our decision we must rely upon the expert knowledge of men whose life profession and life labor it has been to study and to deal with kindred subjects.

So, Mr. President, casting aside all the questions, opinions, and suggestions made in this Chamber, I am compelled, after reading the reports and statements of these experts, after the fullest examination, to follow them. When I do that, and when I follow my friend the Senator from Wisconsin [Mr. SPOONER], as respects his amendment, I see it is certain that there will be a canal built on one or the other route, because if there are legal impediments or difficulties in the pathway of the Panama concession to us or what Colombia may do as respects the treaty presently to be made, the Nicaragua route is still open to us as an alternative without further legislation.

I was impressed in 1884, when President Cleveland withdrew the Nicaragua treaty, with the value of the Frelinghuysen treaty, because it gave us absolute control of a strip of territory 10 miles wide to protect and police and control in the region of the canal itself. When I vote now as I shall I am not committed, as I understand it, to any treaty or project of a treaty that will not fully protect the canal and all interests incidental to the canal. I am in favor of negotiating with one or the other of these Governments to accomplish these ends—and whichever route is adopted we will deal with one Government or the other—in such way as to give us ample and perfect protection as respects the canal which we are to build, own, and maintain.

I want to see that treaty so framed that our control will have no impediments with respect to the region adjacent to the canal as well as to the line of the canal itself. If we can not secure title at Panama, if we can not make a treaty with Colombia satisfactory to us (and that treaty must come here before it becomes effective), then we are relegated by the amendment of the Senator from Wisconsin, not by choice of the President, but by force of the statute, to the Nicaragua route, and although I believe it is not the best route or the most desirable one, should I be living when the canal is completed I will be willing to take passage on the first available steamer and try its locks and dams and canals and lakes, and am sure it will serve the great commercial purpose we have in view, though not so well as the Panama route.

Without going into this question by and large, I wish to say that I do not share the fears and doubts of some of our friends about what will be done with this canal in the future. No interest, big or little, can impede its progress. The people of the United States are for a canal and they intend to have it. But they have intrusted to us the decision as respects how the $200,000,000 shall be expended to attain that purpose, and they ask of us that with whatever intelligence and judgment we have we shall so locate the canal as to justify our action when the canal is constructed and when we come to realize its value in the commerce of our country and in the commerce of the world.

I wish to thank the Senator from Alabama for yielding to me to express my views on the subject, and I am glad that after these many years of patient and intelligent labor on this subject of an isthmian canal his hopes are to be realized. Although it may be that the route he has so faithfully and intelligently advocated may not be adopted, yet the chief purpose will be the construction of a canal on the American continent piercing the two oceans for the benefit of the commerce of the world.

The National Irrigation Bill.

SPEECH

OF

HON. THOMAS H. TONGUE,

OF OREGON,

IN THE HOUSE OF REPRESENTATIVES,

Thursday, June 12, 1902.

The House being in Committee of the Whole on the state of the Union, and having under consideration the bill (S. 3057) appropriating the receipts from the sale and disposal of public lands in certain States and Territories to the construction of irrigation works for the irrigation of arid lands—

Mr. TONGUE said:

Mr. CHAIRMAN: The limited time assigned for the discussion of this bill makes brevity a pressing necessity. It is a measure of unusual importance, the first of its kind to come before this House. If passed and enacted into law, it will be far-reaching in its consequences, and will mark an important epoch in the history of the great West. It will be impossible for its friends to properly present its merits in the course of a single afternoon. I shall confine myself, therefore, very largely to defending it against the charges brought by the gentleman from New York, Mr. RAY, that its provisions violate the Constitution of the United States.

This charge is so often made against so many proposed enactments, and so often merits, as it receives, little consideration. But the gentleman from New York possesses great legal learning. He has had varied and extensive experience, both at the bar and in Congress. He is the chairman of the Judiciary Committee, and as such, in a manner, the legal adviser, the attorney-general, as it were, of the House. His opinions upon legal and constitutional questions, both from his personal and professional standing and official position, are entitled to great weight and careful consideration.

I should hesitate to combat his views were I not, as I am in this instance, sustained by the great weight of legal authority, the unbroken current of judicial decisions, and the uniform practice of the Federal Government. Supported by these, it will not, I believe, be difficult to successfully meet every argument the gentleman has made. In supporting the constitutionality of this bill

it will not even be necessary to resort to the provisions of section 8, Article I, which provides that Congress shall have power "to provide for the common defense and the general welfare of the United States." All the powers attempted to be exercised under the provisions of this bill can be successfully defended under other plain provisions of the Constitution, as interpreted and enforced by the highest judicial tribunals of the land and the uniform practice of the Government from its foundation until now.

The gentleman from New York contends—

The bill is also unconstitutional because the Congress of the United States has no power to provide for the irrigation improvement of its public lands situated within a State, probably not those situated within a Territory.

And again, that—

The bill is unconstitutional because the improvement of the public lands for sale is not a Government purpose nor the object for which the Government was established or the nation founded, nor is it incidental thereto. It is not necessary to the preservation of the Government or to the discharge of governmental functions.

And again it is contended that—

The Constitution in express terms designedly limits the powers of Congress over our public lands and the disposition thereof to the making of needful rules and regulations respecting the same.

Let us examine the provisions of the bill, and then this contention of the gentleman from New York. The purpose of this bill is the "disposition" of public lands of the United States that can not now be disposed of under any existing laws, and "the making of needful rules and regulations respecting the same." Millions of acres of the public domain, under present conditions, are valueless for any purpose. Nay, worse than valueless. They obstruct the progress and the growth of the country. They are the source of great climatic disturbances. Their vast parched surfaces must be traversed constantly in all communications between the East and the West and between the several sections of the West. The expense of constructing roads and carrying freight and passengers over them and the time wasted in crossing them is stupendous.

This bill provides that when public lands are sold within certain States and Territories specified in the bill, the proceeds are to be applied to the irrigation and reclamation of these parched, arid, and worthless lands within such States and Territories. The object of this irrigation and reclamation is to make salable and disposable what is now neither salable nor disposable under existing laws. The lands so reclaimed are to be sold at the cost of reclamation, and the funds derived therefrom are to be again used to irrigate and reclaim more of these valueless lands, to be again sold and the proceeds again so applied. All sales are to be made only to actual, bona fide settlers, home seekers, and home makers. The whole purpose of the bill, the whole machinery provided, is for the "disposal" of public lands.

Irrigation and reclamation are resorted to only to make fit and ready for "disposal" lands that can not now be otherwise disposed of. Irrigation and reclamation are the means adopted. The end is "disposal," sale, of public lands. No lands are to be irrigated that can not be sold to actual settlers at the price of irrigation. "The rules and regulations respecting" this class of public lands adopted by this bill are those only that are "needful" to secure such "disposal" and sale. No State or Territory owns or controls or has any interest in or authority over any of these lands. No State or Territory can tax them, or improve them, or cut ditches through them, or enter upon them. If the General Government can not irrigate them, there is no power on earth that can rightfully do so. Is it possible that we are in possession of several hundred million acres of public domain that we are powerless to touch and render fit for sale in the only way which they can be fitted for sale? Can not the Federal Government adopt the same means that a private owner could adopt to place his lands upon the market?

POWER OF CONGRESS TO DISPOSE OF THE PUBLIC LANDS IS ABSOLUTE.

Let us examine the Constitution upon this question. Section 3, Article IV, of the Constitution contains the following provision:

The Congress shall have power to dispose of and make all needful rules and regulations respecting the territory or other property belonging to the United States.

The extent of the power conferred upon Congress by this section in reference to the government of the territories of the United States has of late been under some fierce discussion in Congress, before the people, and within the highest judicial tribunals of the land. But in all of these discussions, whether on the floor of Congress, upon the public platform, at the bar, or on the bench, it has been conceded that, standing alone, the power conferred upon Congress by this section is absolute, exclusive, and unlimited.

The only question at issue has been how far and to what extent the power conferred by this section is limited or controlled by other provisions of the Constitution of equal force, and especially that portion of the Constitution which requires that "all duties, imposts, and excises shall be uniform throughout the United States." But nowhere within the Constitution is there any language or provision or expression which, directly or indirectly, expressly or by implication, can by any possibility be construed as limiting or controlling the power conferred upon Congress "to dispose of and make all needful rules and regulations respecting * * * other property belonging to the United States."

Here, and in dealing with this property, the power of Congress is absolute, unlimited, and unrestrained. From the foundation of the Government Congress has claimed this power, has exercised it constantly, and its exercise has been upheld wherever controverted by the highest judicial tribunals of the land, both State and Federal. Upon that question, permit me to refer to a few legal authorities and judicial decisions:

The United States, as the proprietor of the public lands, has by virtue of its proprietorship the absolute and unqualified right of disposal, and neither a State nor Territorial legislature can dictate, modify, or embarrass in any manner the right of Congress to the primary disposal of the public lands.

Kinney on Irrigation, section 147.
Pomeroy on Riparian Rights, section 32.
Union Mill and Mining Company *v.* Ferris, 2 Sawyer, 176.
2 Story on the Constitution, page 200, section 1328.

In Irvine *v.* Marshal et al. (20 Howard, 558) the judge delivering the opinion of the court says:

It can not be denied that all the lands in the Territories not appropriated by competent authority before they were acquired, are in the first instance the exclusive property of the United States, to be disposed of to such persons, at such times, and in such modes, and by such titles as the Government may deem most advantageous to the public fisc, or in other respects most politic.

In Union Mill and Mining Company *v.* Albert Ferris et al., reported in 2 Sawyer, 176, decided in 1872, the supreme court of Nevada say:

The Government of the United States has a perfect title to the public land and an absolute and unqualified right of disposal. Neither State nor Territorial legislation can in any manner modify or affect the right which the Government has to the primary disposal of the public land.

In Gibson *v.* Chouteau (13 Wallace, 92), Judge Field, delivering the opinion of the Supreme Court of the United States, says:

With respect to the public domain, the Constitution vests in Congress the power of disposition, and of making all needful rules and regulations. That power is subject to no limitations. Congress has the absolute right to prescribe the times, the conditions, and the mode of transferring this property, or any part of it, and to designate the persons to whom the transfer shall be made. No State legislation can interfere with this right or embarrass its exercise.

On page 100 Judge Field further says:

The same principle which forbids any State legislation interfering with the power of Congress to dispose of the public property of the United States also forbids any legislation depriving the grantees of the United States of the possession and enjoyment of the property granted by reason of any delay in the transfer of the title after the initiation of proceedings for its acquisition. The consummation of the title is not a matter which the grantees can control, but one which rests entirely with the Government. With the legal title, when transferred, goes the right to possess and enjoy the land, and it would amount to a denial of the power of disposal in Congress if these benefits, which should follow upon the acquisition of that title, could be forfeited because they were not asserted before that title was issued.

While Congress not only possesses the absolute right of the disposal of the public domain, it has also the right to prescribe the conditions upon which the grant may be made. It may delay the title or withhold the fee until such times as the Government may prescribe, and the State can interpose no objection, can raise no obstacles.

In Gibson *v.* Chouteau (supra), Justice Field laid down the following doctrine:

The same principle which forbids any State legislation interfering with the power of Congress to dispose of the public property of the United States also forbids any legislation depriving the grantees of the United States of the possession and enjoyment of the property granted by reason of any delay in the transfer of the title after the initiation of proceedings for its acquisition. The consummation of the title is not a matter which the grantees can control, but one which rests entirely with the Government. With the legal title, when transferred, goes the right to possess and enjoy the land, and it would amount to a denial of the power of disposal in Congress if these benefits, which should follow upon the acquisition of that title, could be forfeited because they were not asserted before that title was issued.

The Federal Government, as proprietor of the public domain, has the power to annex conditions to grants. It may do this either in the grant or patent itself, conveying each particular portion of the public domain to its grantees and patentees, or it may by Congressional legislation adopt any general regulation or impose any conditions or limitations upon the use of the public domain, upon all persons who acquire title to portions of the public lands from the Government, and the title so acquired will be held by the grantee thereof, subject to such conditions and limitations. (Kinney on Irrigation, sec. 147, p. 223; Pomeroy on Riparian Rights, sec. 32.)

But the unlimited power of Congress over the public domain, not only in regard to its disposal, but in dealing with it in every way, arises necessarily from the conditions that attend its ownership. The owner of land within a State, by a fee-simple title, takes it subject to several conditions and limitations. It is subject to the power of taxation both by the State and Federal Government. It is subject to the right of eminent domain of both the State and Federal Government.

The method and manner by which titles are conferred, by which

they are transmitted from parent to child, the manner in which deeds must be drawn, wills executed and admitted to probate, is subject to the laws of the State; but the title of the Federal Government to the public lands is subject to no restrictions, no control, no regulations by any authority but its own. It possesses within itself all the rights of the owner and all the sovereign powers belonging to both State and Federal Government in lands vested in private ownership. It follows, therefore, that it must have, from the very nature of things, the absolute control and unrestricted management and the absolute right of disposal. The existence of these lands imply the power somewhere to do with them all this bill contemplates. But as to them, all power is in the Federal Government.

The tenth article of amendment of the Constitution has no application here. That article provides:

> The powers not delegated to the United States by the Constitution, nor prohibited by it to the States, are reserved to the States respectively, or to the people.

The public lands dealt with under this bill were never vested in the States. They were owned by the Federal Government before the States in which they are situate had existed as States. There could be therefore no "powers" reserved. There are no "powers" over them, or that attach to them, except the sovereignty of the United States. Combining, therefore, as it does, within itself all the rights of ownership and all the rights of sovereignty, it can not be otherwise than that the Federal Government may do with these lands as it may, dispose of them in any manner it may select, and may adopt whatever means it may deem appropriate to render such lands in proper condition for disposal, sale, and settlement.

THE POWER OF CONGRESS TO DISPOSE OF THE PROCEEDS OF THE SALES OF PUBLIC LANDS IS UNLIMITED.

Again, the absolute ownership, the absolute right of disposal, carries with it the right to dispose of the proceeds of the public lands. No money is to be invested in irrigation or reclamation except the proceeds from the sale of public lands. Congress has always exercised the unlimited right to dispose of the proceeds of the public lands, as it has of the lands themselves. It had devoted these proceeds to a wide variety of subjects; to the establishment and maintenance of universities, of agricultural colleges, of scientific schools.

In 1846 Congress granted lands to the Territory of Iowa for the purpose of aiding said "Territory to improve the navigation of the Des Moines River from its mouth to the Raccoon Fork." In the act admitting the State of Idaho into the Union Congress not only, as in other instances, devoted sections 16 and 36 for the support of common schools, but it also made grants of lands to be used in aiding the State in "erecting public buildings at the capital of said State for legislative, executive, and judicial purposes."

It granted 90,000 acres "for the support of an agricultural college;" 100,000 acres for the "maintenance of a scientific school;" 100,000 acres "for State normal schools;" 50,000 acres "for the support and maintenance of the State insane asylum, located at Blackfoot;" 50,000 acres "for the support and maintenance of the penitentiary located at Boise City;" 150,000 acres "for other State charitable, educational, penal, and reformatory institutions."

This House during this Congress has passed an act granting to Oklahoma lands for the maintenance of a university and the common schools—for the benefit of the agricultural and mechanical college 250,000 acres, for the benefit of the colored agricultural and normal university 100,000 acres, and for the benefit of normal schools 250,000 acres.

The same act grants to the Territory of Arizona public lands to be used in the support of common schools, universities, and colleges: for the erection of public buildings at the capital; for the establishment of an insane asylum and penitentiary; for a deaf, dumb, and blind asylum; for a hospital for disabled miners, and for State, charitable, penal, and reformatory institutions.

Similar grants by the same bill were made to New Mexico, including a grant for the establishment of a State military institute.

Now, does the gentleman from New York contend that there is any express power conferred upon the Constitution to provide for deaf, dumb, and blind asylums, for hospitals for disabled miners, for the construction of penitentiaries for the confinement of people guilty of violating State laws, for the construction of insane asylums, for the maintenance of normal schools and "colored" universities? Is this any function of the Federal Government? Is the power to establish any of these institutions "necessary to the preservation of the Government or to the discharge of governmental functions?"

And yet, where was the gentleman from New York when these bills were being passed? Why was he so silent? Why no objection to their constitutionality? Or does the gentleman contend that there is some peculiar provision of the Constitution whereby Congress may have the power to erect a penitentiary, and an asylum, and a hospital for disabled miners entirely within a State, managed by a State, and yet it has no power to fit its lands for public sale and make them habitable and provide for their disposal to home seekers and home builders? All of these powers have been exercised by the General Government simply because it is the absolute owner of the public lands, has the absolute right of disposal and management, and may do as it pleases with the proceeds derived from such sale.

Oh, but we are told the power to dispose of lands does not include, as incident thereto, the power to improve or even repair, and it has been universally so held. "A power of attorney to sell and convey lands does not include the power to repair or to improve." A strange jumbling here. Who has given a power of attorney to the Federal Government? It is not acting as the agent. It is acting as the absolute, unrestrained owner. The gentleman admits that "we may care for them, preserve them, survey and plot them, sell off the timber, and lease the mining lands in the Territories, for this is but a disposition of the ores and metals therein, and if in so doing we incidentally improve such lands we do not violate the Constitution." What greater power are we exercising under the present contemplated law than the gentleman here admits we may exercise?

CONGRESS MAY ADOPT APPROPRIATE MEANS TO CARRY OUT THE POWERS CONFERRED UPON IT.

Section 8, Article I, of the Constitution of the United States, in the enumeration of the powers of Congress, confers the following:

> To make all laws which shall be necessary and proper for carrying into execution the foregoing powers and all other powers vested by this Constitution in the Government of the United States or in any department or officer thereof.

This clause is the foundation of the doctrine of "implied powers." Under this provision Congress is invested with authority to adopt such means or agencies for carrying into effect its enumerated powers, including the disposal of the public lands as shall be requisite, essential, or conducive to the accomplishment of that result, or that seems appropriate to the exercise of the authority conferred upon Congress. Congress, in the first instance, is the judge of the necessity and of the adaptability of the means to the end. It is true its decisions are not conclusive, but its decisions will not be set aside and the acts of Congress will not be adjudged unconstitutional unless it is clearly apparent that the means adopted can not be needful or appropriate to the execution of any of the powers specified in the Constitution. These conclusions are fully sustained by the decisions of the Supreme Court of the United States in the following cases:

In McCulloch *v.* The State of Maryland et al. (4 Wheaton, 316), in which Chief Justice Marshall delivered the opinion, the Supreme Court of the United States decide:

> The Government of the Union, though limited in its power, is supreme within its sphere of action, and its laws, when made in pursuance of the Constitution, form the supreme law of land.
>
> If the end be legitimate and within the scope of the Constitution, all the means which are appropriated, which are plainly adapted to that end, and which are not prohibited may be constitutionally employed to carry it into effect.
>
> The States have no power, by taxation or otherwise, to retard, impede, burden, or in any manner control the operations of the constitutional laws enacted by Congress to carry into effect the power vested in the National Government.
>
> A constitution, to contain an accurate detail of all the subdivisions of which its great powers will admit, and of all the means by which they may be carried into execution, would partake of the prolixity of a legal code, and could scarcely be embraced by the human mind. It would probably never be understood by the public. Its nature, therefore, requires that only its great outlines should be marked, its important objects designated, and the minor ingredients which compose those objects be deduced from the nature of the objects themselves. That this idea was entertained by the framers of the American Constitution is not only to be inferred from the nature of the instrument, but from the language. Why else were some of the limitations found in the ninth section of the first article introduced?

McCulloch *v.* Maryland (4 Wheat., 316).
Martin *v.* Hunter (1 Wheat., 304).
Gibbons *v.* Ogden (9 Wheat., 1).
Hepburn *v.* Griswold (8 Wall., 603).
Legal Tender Cases (12 Wall., 457).
Juilliard *v.* Greenman (110 U. S., 321).
United States *v.* Coombs (12 Pet., 72).

THE LAWS PASSED BY CONGRESS TO CARRY OUT THE POWERS VESTED IN THE FEDERAL GOVERNMENT BECOME THE SUPREME LAW OF THE LAND.

Article VI of the Constitution provides:

> This Constitution and the laws of the United States which shall be made in pursuance thereof, and all the treaties made or which shall be made under the authority of the United States, shall be the supreme law of the land, and the judges in every State shall be bound thereby, anything in the constitution or laws of any State to the contrary notwithstanding.

From these authorities it is clearly apparent that Congress not only has the absolute right of disposing of the public lands and their proceeds, of making the necessary rules and regulations for their management, but it may adopt whatever means appear reasonably necessary for disposing, managing, controlling the public lands, and whatever laws it passes in reference to them become the supreme laws of the land. No State or Territory can hamper, obstruct, or interfere with this management.

THE FEDERAL GOVERNMENT POSSESSES THE RIGHT OF EMINENT DOMAIN.

But it is complained that under this bill the Federal Government asserts and will attempt to exercise the right of eminent domain and the power of condemnation of private property in order to carry out the objects contemplated in this bill, and the gentleman "most emphatically" denies that any such power exists. This contention is contrary to the whole history of the Government and the unbroken decisions of the courts. The United States Government, in the exercise of its proper powers, can exercise the right of eminent domain within either States or Territories and either with or without the consent of such State or Territory. This power has been uniformly claimed by the Government and upheld by the courts.

The fifth amendment to the Constitution containing this provision, "Nor shall private property be taken for public use without just compensation" implies that the Federal Government shall exercise the right of eminent domain:

Within its own sphere, and with reference to its own constitutional duties and functions, the Government of the United States is sovereign, and therefore must possess the power of eminent domain, as well as all other sovereign powers. Whenever it may be necessary to appropriate private property for the carrying on of any of the proper undertakings or offices of the General Government, that Government may exercise its power of eminent domain, as well within the limits of a State as in the districts subject to its exclusive jurisdiction, and the consent or cooperation of the State is not required. For instance, the Federal authorities may proceed directly, by their own officers and courts, and without the intervention of the State, to condemn and appropriate private property, anywhere situated, for post-offices, court-houses, forts, arsenals, light houses, or military roads. (Black's Constitutional Law, sec. 170, pp. 400 and 401; 2 Story on Constitution, p. 673, sec. 1956; Cooley's Constitutional Limitations, pp. 653 and 654.)

In Darlington *v.* The United States (82 Pa. St., 382) the supreme court of Pennsylvania decided:

The right of the United States to take private property for public use is too well settled to be now disputed. Of the numerous cases upon this subject it is sufficient to refer to Kohl *v.* The United States, which is believed to be the last, and will be found reported in the American Law Register for September, 1896.

The opinion of the court was delivered by Justice Strong. He said:

The right of eminent domain is inherited in all governments by virtue of their sovereignty. For all purposes required by the Constitution this right exists in the United States independently of any consent of the State in which the property lies.

In Burt *v.* Merchants' Insurance Company (106 Mass., 356) the court, in upholding the right of the United States to condemn property for public use, say:

But it is now too late to question the validity of such acts, even if there could have been any reasonable doubt about it originally.

The same doctrine was upheld in Reddall *v.* Bryan et al. (14 Md., 445).

In Trombley *v.* Humphreys (23 Mich., 471) the court say:

I think that counsel is in error in supposing that the assent of the State is a condition precedent to the taking of lands by the General Government. Its consent is required only for the purpose of a transfer of jurisdiction.

In Kohl et al. *v.* The United States (91 U. S., 367) Mr. Justice Strong, in delivering the opinion of the court, says:

It has not been seriously contended during the argument that the United States Government is without power to appropriate lands or other property within the United States for its own uses, and to enable it to perform its proper functions. Such an authority is essential to its independent existence and perpetuity. These can not be preserved if the obstinacy of a private person, or any other authority, can prevent the acquisition of the means or instruments by which alone governmental functions can be performed.

The powers vested by the Constitution in the General Government demand for their exercise the acquisition of lands in all the States. These are needed for forts, armories, and arsenals, for navy-yards and light-houses, for custom-houses, post-offices, and court-houses, and for other public uses. If the right to acquire property for such uses may be made a barren right by the unwillingness of property holders to sell, or by the action of a State prohibiting a sale to the Federal Government, the constitutional grants of power may be rendered nugatory, and the Government is dependent for its practical existence upon the will of a State, or even upon that of a private citizen. This can not be.

In United States *v.* Gettysburg Electric Railway (160 U. S., 668), Justice Peckham, delivering the opinion of the court, says:

In examining an act of Congress it has been frequently said that every intendment is in favor of its constitutionality. Such act is presumed to be valid unless its invalidity is plain and apparent; no presumption of invalidity can be indulged in; it must be shown clearly and unmistakably. This rule has been stated and followed by this court from the foundation of the Government.

Upon the question whether the proposed use of this land is a public one we think there can be no well-founded doubt; and also, in our judgment, the Government has the constitutional power to condemn the land for the proposed use. It is of course not necessary that the power of condemnation for such purpose be expressly given by the Constitution. The right to condemn at all is not so given. It results from the powers that are given, and it is implied because of its necessity or because it is appropriate in exercising those powers. Congress has power to declare war and to create and equip armies and navies. It has the great power of taxation, to be exercised for the common defense and general welfare. Having such powers, it has such other and implied ones as are necessary and appropriate for the purpose of carrying the powers expressly given into effect.

Any act of Congress which plainly and directly tends to enhance the respect and love of the citizen for the institutions of his country and to quicken and strengthen his motives to defend them, and which is germane to and intimately connected with and appropriate to the exercise of some one or all of the powers granted by Congress, must be valid. This proposed use comes within such description. The provision comes with the rule laid down by Chief Justice Marshall in McCulloch *v.* Maryland (4 Wheat., 316, 421) in these words:

"Let the end be legitimate, let it be within the scope of the Constitution, and all means which are appropriate, which are plainly adequate to that end, which are not prohibited, but consistent with the letter and spirit of the Constitution, are constitutional."

The end to be attained by this proposed use, as provided for by the act of Congress, is legitimate and lies within the scope of the Constitution.

In Cherokee Nation *v.* Kansas Railway Company (135 U. S., 641) the court say:

The fact that the Cherokee Nation holds these lands in fee simple under patents from the United States is of no consequence in the present discussion, for the United States may exercise the right of eminent domain, even within the limits of the several States, for purposes necessary to the execution of the powers granted to the General Government by the Constitution. Such an authority, as was said in Kohl *v.* United States (91 U. S., 367), is essential to the independent existence and perpetuity of the United States, and is not dependent upon the consent of the States. (United States *v.* Fox, 94 U. S., 315, 320; United States *v.* Jones, 109 U. S., 513; United States *v.* Great Falls Manufacturing Company, 112 U, S., 645; Van Brocklin *v.* State of Tennessee, 117 U. S., 151, 154.)

As was said by Mr. Justice Bradley in Stockton *v.* Baltimore and Ohio Railroad (35 Fed. Rep., 9, 19):

"The argument based upon the doctrine that the States have the eminent domain or highest dominion in the lands comprised within their limits, and that the United States have no dominion in such lands, can not avail to frustrate the supremacy given by the Constitution to the Government of the United States in all matters within the scope of its sovereignty. This is not a matter of words, but of things. If it is necessary that the United States Government should have an eminent domain still higher than that of the State, in order that it may fully carry out the objects and purposes of the Constitution, then it has it. Whatever may be the necessities or conclusions of theoretical law as to eminent domain or anything else, it must be received as a postulate of the Constitution that the Government of the United States is invested with full and complete power to execute and carry out its purposes."

However, conceding the right of Congress to exercise the power of eminent domain without the consent of the States, it is not even attempting to exercise that power under the provisions of this bill. The eighth section especially declares that nothing in this act shall be construed as affecting, or intended to affect, or to in any way interfere with the laws of any State or Territory relating to the control, proper use, or distribution of water used in irrigation, or any vested right acquired thereunder, and the Secretary of the Interior, in carrying out the provisions of this act, shall proceed in conformity with such laws. Every State and Territory referred to in this act contains laws authorizing the exercise of the right of eminent domain for the purpose of irrigation.

IRRIGATION A PUBLIC USE.

Again, the gentleman from New York, however, contends that "the use proposed by this bill is not a public use." It is contended that—

Here the use contemplated is an acquiring of lands and water rights, which are to be improved and then sold again to private individuals and used for private purposes or used for storage purposes, the property (water) collected from such water rights and stored to be sold to private individuals and corporations, and all for purposes of speculation or supposed gain, not to the public treasury, but to the State, by increasing its population, productive power, and taxable property.

It is rather late in the progress of the world, and especially of the United States, to contend that to apply water to the irrigation of arid lands is not a public use. The declaration of the gentleman from New York is in conflict with the laws of every State and Territory to which this bill applies and the opinion of every judicial officer, State and Federal, who has been called upon to express an opinion upon that question. That irrigation is a public use, and that the power of eminent domain may be invoked to aid irrigation enterprises, is too well settled to be now controverted. I will refer the House to a few only of the many authorities upon that question:

The constitutions of several of the States undertake, with more or less exhaustiveness, to enumerate the purposes for which the right of eminent domain may be exercised. The following are among the cases specified in one or more of the State constitutions: Public buildings and grounds; roads, streets, and alleys in municipalities; waterworks, aqueducts, drains, and sewers in counties, cities, and towns; raising the banks of streams; removing obstructions therefrom, widening, deepening, or straightening their channels; railways; turnpike or toll roads; canals; irrigation ditches or aqueducts; wharves; docks, piers; bridges; chutes and booms; ferries; telegraph and telephone lines; cemeteries; oil pipe lines. In regard to the most of the foregoing, it may be remarked that, even in the absence of constitutional authorization, they would be regarded as public purposes in a sense which would justify the exercise of the power of eminent domain. (Black's Constitutional Law, pp. 404 and 405.)

Under proper conditions a water course may be taken under the power of eminent domain for the irrigation of the surrounding country seems to be plainly indicated by the decision in Lux *v.* Haggin, "that the riparian owners of property in the water of a stream may, on payment of due compensation to him, be taken to supply farming neighbors with water." (Pomeroy on Riparian Rights, sec. 159; Lux *v.* Haggin, 10 Pac. Rep., 697; Dallbrook Irrigation District *v.* Bradley, 164 U. S., 112, 159, and 160.)

In practically all, if not all, of the arid and semiarid land States statutes have been passed providing for the condemnation of land, water, and other rights in order to aid in the irrigation of arid lands, and the supreme courts of these several States have upheld such legislation.

California, in section 1238 of the Code of Civil Procedure, provides:

Subject to the provisions of this title, the right of eminent domain may be exercised in behalf of the following public uses: * * * Canals, ditches, flumes, aqueducts, and pipes for transportation, supplying mines and farming neighbors with water, and draining and reclaiming lands, and for floating logs and lumber on streams not navigable.

The supreme court of California, as well as the Supreme Court of the United States, has upheld the constitutionality of this provision. (See Lux *v.* Haggin, 10 Pac. Rep., 697.)

In Dallbrook District *v.* Bradley, supra, on pages 159, 160, and 161, the court says:

Viewing the subject for ourselves and in the light of these considerations, we have very little difficulty in coming to the same conclusion reached by the courts of California.

The use must be regarded as a public use, or else it would seem to follow that no general scheme of irrigation can be formed or carried into effect. In general, the water to be used must be carried for some distance and over or through private property, which can not be taken in invitum if the use to which it is to be put be not public, and if there be no power to take property by condemnation it may not be possible to acquire it at all. The use for which private property is to be taken must be a public one, whether the taking be by the exercise of the right of eminent domain or by that of taxation.

Cole *v.* LeGrange (113 U. S., 1), a private company or corporation without the power to acquire the land in invitum would be of no real benefit, and at any rate the cost of the undertaking would be so generally enhanced by the knowledge that the land must be acquired by purchase that it would be practically impossible to build the works or obtain the water. Individual enterprises would be equally ineffectual; no one owner would find it possible to construct and maintain waterworks and canals any better than private corporations or companies, and unless they had the power of eminent domain they could accomplish nothing. If that power could be conferred upon them, it could only be upon the ground that the property they took was to be taken for a public use.

While the consideration that the work of irrigation must be abandoned if the use of the water may not be held to be or constitute a public use is not to be regarded as conclusive in favor of such use, yet that fact is in this case a most important consideration. Millions of acres of land otherwise cultivable must be left in their present arid and worthless condition, and an effectual obstacle will therefore remain in the way of the advance of a large portion of the State in material wealth and prosperity. To irrigate and thus to bring into possible cultivation these large masses of otherwise worthless lands would seem to be a public purpose and a matter of public interest, not confined to the landowners or even to any one section of the State.

The fact that the use of the water is limited to the landowner is not therefore a fatal objection to this legislation. It is not essential that the entire community, or even any considerable portion thereof, should directly enjoy or participate in an improvement in order to constitute a public use. All landowners in the district have the right to a proportionate share of the water, and no landowner is favored above his fellow in his right to the use of the water. It is not necessary, in order that the use should be public, that every resident in the district should have the right to the use of the water.

Nevada has had similar legislation in force since March 3, 1866, and the constitutionality of such act has been uniformly upheld by the courts of that State. (Vansickle *v.* Haines, 7 Nev., 249; Dalton *v.* Bowker, 8 Nev., 190; Mosier *v.* Caldwell, 7 Nev., 363; Lake *v.* Tolles, 8 Nev., 285; Brown *v.* Ashley, 16 Nev., 311; Strait et al. *v.* Brown et al., 16 Nev., 317.)

Similar legislation was enforced in the State of Washington, in the State of Kansas, in Utah, in North Dakota, in South Dakota, in Oregon, in Idaho, in Nebraska, in Arizona, in New Mexico, in Montana, and in Colorado.

The constitutionality of the Oregon statute was upheld in Umatilla Irrigation Company *v.* Barnhart (30 Pac. Rep., 37).

If a reasonable doubt exists as to whether the use to which it is sought to apply the property is a public use, then the declaration of its public use by the legislative power of the Government is conclusive upon that question. This was upheld in the following cases: Lux *v.* Haggin et al., 10 Pac. Rep., 674; Gilmore *v.* Lime Point, 18 Cal., 229; Commonwealth *v.* Breed, 4 Pick., 483; Spring *v.* Russell, 7 Greenleaf, 272; 6 Pick., 10; 23 Pick., 395; 3 Paige, 73; 4 Hill, 151; Umatilla Irrigation Company *v.* Barnhart et al., 30 Pac. Rep., 37.

The Federal Government has exercised the right of eminent domain for the purpose of establishing parks in the city of Washington and in various States and Territories of the United States. In the case of Shoemaker *v.* The United States, supra, the right of eminent domain was invoked and upheld to acquire property to be used for a park in the city of Washington for the pleasure of its inhabitants. We have devoted public lands and exercised the powers of the Federal Government, including the right of eminent domain, for the establishment of national parks in various portions of the United States and Territories.

Is that more constitutional than irrigation? Is it more a public use to provide pleasure grounds and hunting grounds for those who have the leisure and the money to enable them to travel, than to provide water for the irrigation of lands in order to provide food for the hungry, homes for the homeless, and to enable the United States to make its worthless domains suitable habitations for its citizens? Have we more constitutional power to provide amusement and entertainment out of the public domain than to prepare it to produce the necessaries of life? Certainly the gentleman from New York will find few people who agree with him in this contention.

In the light of the foregoing authorities, it seems to me, Mr. Chairman, that there can be no question that the Federal Government has the absolute right to dispose of the public lands. It has the absolute right to apply the proceeds to the purposes of irrigation; that the irrigation of arid lands is a public use, and that the Government has the right to invoke the power of eminent domain wherever necessary to acquire lands for reservoirs or canals, wherever necessary to successfully carry on the irrigation of its public lands.

THIS BILL CALLS FOR THE EXERCISE OF NO NEW POWERS.

Mr. Chairman, under this bill the Federal Government will exercise no rights, no powers that it has not exercised time and time again. It has disposed of the public lands, and of the proceeds absolutely, and for every purpose conceived of by the Government. It has exercised the right of eminent domain whenever land was needed to carry out any Government enterprise. But, in addition to that, it has in a great many separate acts provided for the irrigation of public domain.

For years past, continuously and repeatedly, since the gentleman from New York has been a member of this House, Congress has appropriated money aggregating millions for the purpose of irrigating public lands. It has passed two or three acts of that kind during the present session of the present Congress. These appropriations have been in sundry civil bills, in Indian appropriation bills, in agricultural appropriation bills. It is true, in the main, these sums have been for the purpose of investigation, for examination, for survey, for the drawing of plans. This money has been expended in vain unless we pass this or some similar bill. But is it constitutional to expend money to investigate an irrigation project, draw the plans of reservoirs and canals and ditches, and not constitutional to carry on irrigation? Is it constitutional to squander money, but not to spend it usefully? Does the gentleman wish to draw this distinction?

But the Government has been carrying on irrigation works under the control of the Indian Department. There are a number of reservoirs now under construction by that department. Does the gentleman contend that there are some peculiar provisions of the Constitution that authorize the Commissioner of Indian Affairs to irrigate public lands adjoining Indian reservations or to irrigate lands belonging to Indians, but none that would enable the Secretary of the Interior to irrigate public lands belonging to the United States?

Where does the gentleman draw the distinction? Or was it constitutional last year to vote in three separate appropriation bills provisions for carrying on irrigation, but not constitutional this year? Or was it constitutional in December, in January, in March, while the Indian appropriation bill was passed, and the sundry civil bill was passed, and the Agricultural bill was passed, during this session of this Congress, and not constitutional during the month of June to provide for irrigation under a separate bill? Or is it constitutional to make provisions for irrigation when it is mixed up with some other subject, and not constitutional to pass a separate bill for that purpose, unconnected with other matters?

It seems to me, Mr. Chairman, either the watchful eyes of the gentleman have been closed while the Constitution has been broken into fragments on numerous and various occasions during his long service or else he has only just made the wonderful and astounding discovery that the Constitution of the United States has so hampered the powers and fettered the hands of the Federal Government that, while it is the proprietor and sovereign of hundreds of millions of acres of public lands, it is powerless to dispose of them or use them in the only way in which it is possible to dispose of them or put them to any valuable use.

Through the operation of the homestead act we have disposed of public land in consideration of settlement and cultivation. In the timber-culture act we have disposed of public land in consideration of the planting of trees in treeless regions. In the desert-land act and in the Carey Act we have disposed of public lands in consideration of their irrigation and reclamation. In all of these acts the Government has practically devoted the proceeds of public lands to building homes, putting lands in cultivation, planting them with trees, and for their reclamation and irrigation.

We have done all under those acts, and exercised every power under those acts, we are attempting to exercise under this, save that of eminent domain alone. We have attempted in a feeble way through two of those acts what we are attempting to do in a more practical, direct way in the one now proposed. Is it more constitutional, through the gift of public lands, to employ private parties and private corporations and great syndicates to engage in their irrigation and reclamation, than it is to carry on the same work through the Secretary of the Interior and the Director of the Geological Survey? Is it constitutional to employ one agency to carry out the objects of the Government and not another, to conduct operations through one class of men and not conduct them through another?

THE BENEFITS OF THIS BILL WILL NOT BE SECTIONAL OR CONFINED TO THE WEST.

Mr. Chairman, I am loath to close without an attempt, at least, in a feeble way to reply to another objection urged against this bill, voiced by the gentleman from New York. It is alleged that we are seeking to benefit the West at the expense of the East. It is even alleged that we are about to tax the East, not only to benefit the West, but to the injury of the East and Middle West; that this measure is exclusively for the benefit of the people who are now living in the States and Territories named in this bill, and will produce injury to those now living in the East and Middle West.

I most emphatically deny the correctness of this claim. The enforcement of this law will not only not injure the people of the East, but it will benefit more people who are now in the East and Middle West than are now within the Western States and Territories. The arguments most industriously used and that will procure more votes against this measure than any other are the claims that by the reclamation and irrigation of large tracts of land it will make undue competition with Eastern farmers.

If this were true the competition would strike with still greater force against the Western farmers themselves. The lands to be irrigated will be by the side of the Western farms. The competition, if any, will be at the very door of the Western farmer, in his immediate vicinity, will invade his own market and make competition with his own customers. The people in the West are agricultural in a much larger proportion than those in the Eastern States. In the main, they are the owners of the farms upon which they reside. At best they are few in number, and but a small proportion of them will avail themselves of the provisions of this bill. They are not anxious to depreciate the value of their own homes. But by far the greater portion of the people who will procure homes within the regions to be reclaimed will be from the East and Middle West. They will be your constituents, not ours.

Farmers in Iowa, Illinois, Indiana, who are now selling high-priced farms, immigrating to Canada to procure cheap lands, will be able to find homes without seeking them under foreign flags, and without renouncing their allegiance to the Stars and Stripes. The best citizens you have are seeking homes under a foreign flag. Their loss is to be deplored. We need them and want to retain them. The grown-up sons of your own farmers who are unable to buy high-priced lands near the parental homestead will be able to go West, procure homes, and continue the occupation to which they have been trained. The surplus labor of your cities, those who desire a purer atmosphere, both physical and moral, will be able to find it in the West. Why is Eastern agriculture prosperous to-day? It is because the factory is near the farm, because the city with its ceaseless activity creates a constant, increasing demand for all the farm can produce.

Put more fuel in the factory fires, intensify the business activity of the cities, and you put more money in the pockets of your farmers. The more workmen to clothe and feed and shelter, the greater the prosperity of the farmer. But where in the whole world is there a better market for the products of Eastern factories in proportion to the population than in the great West? We are not agricultural, not a manufacturing people. I fear from the scarcity of coal and iron it will never be otherwise. Oregon alone, with less than half a million inhabitants, sells her salmon, her lumber, her wheat, and other farm products to foreign countries, aggregating millions of dollars annually, and expends practically all of it in the East.

In the morning when the Oregon farmer shakes slumber from his eyelids he rises from an Eastern-made bed, covered by Eastern-made blankets, dresses himself in Eastern-made clothing, seizes an Eastern-made ax, and makes a fire in an Eastern-made stove. He sits down to breakfast around an Eastern-made table, supplied with Eastern crockery and Eastern groceries. He goes out to his daily toil, puts Eastern-made harness upon his horses, plants his crops with Eastern-made plows, drills, harrows; reaps them with Eastern-made mowers and binders; prepares them for market with Eastern-made hay presses, Eastern-made thrashing machines; hauls them to market upon Eastern-made wagons; pays freight upon railroads owned in the East, made from Eastern-made rails, supplied with Eastern-made equipments.

If he rides for pleasure, it is in an Eastern-made buggy or carriage. His children ride upon Eastern-made wheels. When he sells his crop, it is to pay the interest upon a mortgage owned in the East. If he insures his life, it is with an Eastern company. If he stores his mind with useful knowledge, or seeks to educate his children, every book and magazine bears the impress of an Eastern establishment. He can not chant the praises of his Maker or conduct devotional exercises in the family without using a Bible or hymn book printed in the East. When the end comes, and he is laid to his final rest, he is clothed with an Eastern-made shroud, placed in an Eastern-made coffin, carried to the grave in an Eastern-made hearse, and his remains are covered with an Eastern-made spade. It is only by dying that he can draw from the East a small portion of the money he has expended there in the way of premiums upon his insurance. What does such a man spend in the West? How much of his earnings remain there? Practically nothing, or but the smallest pittance.

When Fox uttered that famous prediction that free trade would conquer the Western Continent, that the shirt upon the back of the mountaineer would bear the stamp of Manchester and the knife of the hunter the impress of Sheffield, he was mistaken. He should have substituted Lowell for Manchester, Pittsburg for Sheffield. We are constantly toiling for the East. For every implement that we purchase, for toil or pleasure, we pay tribute to the East. We bring our golden treasures, the product of our toil, lay them at your feet, pour them into your lap, or empty them into your coffers.

Would you increase the number of those who thus labor for the increase of your wealth and your prosperity, who are feeding the inhabitants of your great cities, who are enlarging and building up your commerce, who are increasing the number of your furnaces, and swell the stream of Western gold that comes to your very doors? Then support this bill, and build up the West. For you there is no proposed expansion, no prospective markets to be opened or created, comparable to those between the Mississippi River and the Pacific Ocean. It is proposed to make such tariff reductions upon imports from Cuba that will cost the United States in loss of revenue from $7,000,000 to $9,000,000 annually.

The compensation sought for is an increase of our sales to Cuba and in order to secure a larger proportion of her commerce. The increased trade to be secured with these barefooted, barebacked, indolent, half-civilized people will not compare with the increased trade to be secured in the great West through the expenditure of a much less sum. In securing this Western expansion, in thus annexing arid America, there will be no increased Army expenditures or increased cost in maintaining a navy. On the other hand, with every acre of land reclaimed, with the construction of every irrigation plant, the cost of the maintenance of your Army and Navy, as of every other function of government, will be divided with Western inhabitants.

But, Mr. Chairman, let us have broader patriotism. I deprecate that narrow spirit that carps at and criticises every expenditure that will not directly benefit the particular portion of the country in which the objector happens to live. There can be no appropriation made, no enterprise carried out, that does not in some way confer a peculiar or special benefit upon one locality more than upon the rest of the country. No Government enterprise can be equally beneficial to all portions of the land.

In carrying on the Government at Washington it necessitates the distribution of $20,000,000 annually to the inhabitants of this city, who pay but one-half of their own local taxes. If we build a battle ship, we take the plates from Pittsburg and carry on the work of construction in an Eastern shipyard. In training the future officers of our Army it necessitates the expenditure of millions of dollars near the home of the gentleman from New York. We have expended more in the construction of public buildings in one city of the State which the gentleman in part so ably represents than will be expended in years within the 16 States and Territories included in this bill. We can do equal justice only by treating all sections with equal consideration and with equal fairness.

But in a larger sense, will the gentleman from New York and those who use this argument with him never fully realize that we are one people? That the prosperity and welfare of all sections of our common country are inseparably interwoven and mutually interdependent? You can not strike at the prosperity of one section without striking at the welfare of all. You can not increase the prosperity of one portion that you do not in a measure increase the prosperity of all.

Whenever either happiness or misery, good fortune or calamity, prosperity or adversity, overtakes one section of our common country we shall all be partakers in some degree. We can not blight or bless a single farm, a single orchard, a single garden, or a single household that you do not is some degree increase the happiness or misery of us all. You can not confer blessings upon any section of our land that you do not in some degree increase the happiness of all the people. Joy and grief, happiness and misery, prosperity and adversity radiate in all directions, and communicate themselves in ever-increasing circles. Like the pebble dropped upon the smooth surface of the lake, the effect of the blow is not confined to the immediate spot where it first falls.

The love of a patriot, the wisdom of a statesman, embrace all the country to its remotest corners. The only generous way, the only manly way, the only patriotic way, the only wise statesmanship, is to build up and develop our common country by building

up and developing its every part and section. The golden opportunity to do good to all men or to all sections of our country by one act, is a glorious privilege that comes to few men. The opportunity to do good to some men, to aid, and support, and benefit some portion of our country at some time comes to all. Let us embrace these opportunities whenever presented.

The surest way, the practical and only way, to build up and render prosperous our whole country is to contribute whenever we can to the prosperity of its several parts. That broad patriotism that seeks the happiness of all will embrace the East as well as the West, the North as well as the South. But there have been few laws passed by any Congress the beneficial effects of which will be so far reaching, will concern the happiness of so many people, and will so nearly benefit all the people under the protecting folds of the Stars and Stripes as the bill now under consideration.

When its full effects have been obtained; when the now Western desert shall become fruitful; when parched plains are covered with rich verdure; when cactus and sagebrush give place to blossoming trees and fruitful vines; when the now barren sands yield rich harvests; when flocks and herds shall feed and repose where now the wild prairie wolf pursues its prey; when the haunts of half-starved and half-naked savages teem with industry and are filled with the music of industry and childhood's happy laughter; when the vast plains now barren shall be filled with life and happiness, decked and covered with prosperous villages, schoolhouses, churches, colleges, and universities, and, above all, happy homes, American homes, then the East and the West, the North and the South will rejoice in a prosperity that will be shared and enjoyed by all, of which all will be proud, and in which all will rejoice.

British Atrocities in South Africa—Anglomania the Keynote of our Foreign Policy—In the midst of the unprovoked War of Extermination waged by Great Britain against the Boers we are to send Special Ambassadors to the English Court to help Celebrate the Coronation of King Edward, all for the Purpose of Signifying our Approval of the Policy of "the Mother Country."

SPEECH

OF

HON. CHARLES F. COCHRAN,

OF MISSOURI,

IN THE HOUSE OF REPRESENTATIVES,

Monday, March 17, 1902.

The House being in Committee of the Whole on the state of the Union, and having under consideration the bill (H. R. 12346) making appropriations for the construction, repair, and preservation of certain public works on rivers and harbors, and for other purposes—

Mr. COCHRAN said:

Mr. CHAIRMAN: I rise for the purpose of directing attention to a joint resolution introduced by me and referred to the Committee on Foreign Affairs nearly a month ago.

Permit me to read the resolution.

Be it resolved by the Senate and House of Representatives of the United States of America in Congress assembled, That the Hon. Paul Kruger, President of the South African Republic, is hereby invited to visit the United States at such time as may suit his convenience, as the guest of the country. For the defrayment of the expenses incurred in his entertainment while in this country the sum of $25,000, or so much thereof as may be necessary, is hereby appropriated, out of any money in the Treasury not otherwise appropriated.

Mr. Chairman, I may as well state at the outset that this resolution was introduced as a rejoinder to the President's announcement that special ambassadors are to represent the United States at the English court and take part in celebrating the coronation of King Edward. Under any circumstances a departure so extraordinary would be censurable, and the fact that it is the climax of the numerous exhibitions of partiality for the British monarchy which have punctuated, at frequent intervals, the foreign policy of our Government during the past five years, and the reflection that our special ambassadors will kiss the hand of King Edward in the midst of the unprovoked war of extermination that is being waged by this monarchy against two republics must render our participation in the coronation festivities execrable in the eyes of all true Americans.

There is a precedent for the passage of this resolution. A little more than fifty years ago the people of Hungary rebelled and attempted to cast off the yoke of the Austrian monarchy and set up a republic. The movement failed, and Kossuth, the great leader of the movement, fled to Turkey to escape the hangman. He was cast into prison, and Austria and Russia demanded his extradition. The Sultan offered Kossuth asylum and safety if he would renounce his religion. The reply of the illustrious patriot will live forever in literature as a masterpiece and be treasured until the end of time as a memorial of the heroism of its author.

My answer does not admit of hesitation. Between death and shame, the choice can neither be dubious nor difficult. Governor of Hungary, and elected to that high place by the confidence of 15,000,000 of my countrymen, I know well what I owe to my countrymen even in exile. Even as a private man I have an honorable path to pursue. Though once the governor of a generous people, I leave no inheritance to my children. They at least shall bear an unsullied name. God's will be done. I am ready to die.

The English are murdering just such men as Kossuth by wholesale. They have already assassinated half a dozen brave officers of the Boer army. After being made prisoners of war, they have been court-martialed and shot. Chamberlain contends that it is treason for citizens of Natal or the Cape Colony to take up arms against the British Crown. Hence these assassinations.

It was upon this same charge that Austria sought to apprehend and put to death the leader of the Hungarian revolution, and unhesitatingly our Government, responsive to the sentiments of the people, undertook and accomplished his rescue.

The United States, which we are told is now for the first time recognized as a great world power, has not even remonstrated against far more hideous crimes of recent occurrence in South Africa. When the Austrian monarchy put a price on the head of Kossuth, pursuant to suggestions of the Senate, the President directed our minister to Constantinople to insist upon his release, and, in order to insure his safety, an American man-of-war was ordered to give him safe passage to the United States. He came. He was given the privilege of the floor in both houses of Congress, and was received with profound reverence and affection by the people of this country. Large sums were contributed by our people for the avowed purpose of enabling the Hungarian patriots to resume the struggle for independence, and officials of all classes, including the President, manifested the strongest sympathy for the cause. In the Senate, resolutions expressing sympathy for the Hungarian patriots, calling upon the Committee on Foreign Affairs to inquire into the expediency of suspending diplomatic relations with Austria, and proposing a grant of public lands to Hungarian exiles who might seek asylum in the United States, supplemented the resolution directing that a man-of-war be sent to convey Kossuth to our shores.

Bear in mind, Mr. Chairman, that undoubtedly Kossuth was a rebel, and that the Austrian Empire was on friendly terms with this country when the revolt occurred and when it ended in the surrender of the rebel forces.

But did this prevent our Government from evincing in unmistakable ways its sympathy for the republican movement which was only an echo of our own Revolutionary war? We rescued Kossuth, and mingled our tears with the tears of those who mourned the failure of the revolutionary cause in Hungary, heeding not the fact that by so doing we fairly slapped in the face the most powerful and pretentious of European monarchies.

And the roystering heroes who wore shoulder straps throughout the thirty days' war with Spain declare that the United States has just become a world power! If it is so, let us prove it by doing now what we did fifty years ago. Let us throw the full weight of the nation's influence into the balance in favor of the republic as against the monarchy.

Let us say to the world that we abhor the bloody deeds and unholy purposes of the conqueror whose armies are engaged in strangling liberty and independence in South Africa. [Applause on the Democratic side.]

Paul Kruger is an exile, but he is the president of a republic. He is not a revolutionist, much less a rebel. The South African Republics have not yet lost the lawful right to claim a place in the family of nations. No one familiar with the history of the Republics and the controversy with Great Britain which led up to the war will deny that, prior to the commencement of hostilities, for thirteen years, the Transvaal Republic was a free and independent state—a nation. I know that just before the war began, Chamberlain, on behalf of Great Britain, claimed suzerainty. The claim had not the shadow of a legal foundation, but granting it, still the Republic was a nation. Great Britain claimed only a right to a voice in determining its foreign relations, and was bound by a solemn treaty not to interfere in any way with the domestic affairs or government of the South Africans.

For over fifty years, before their annexation, we in fact, sustained precisely the same relation to the Hawaiian Islands that Chamberlain falsely contends existed between Great Britain and the South African Republic. When the Cuban republic shall have been fully established, we will have a right to a voice in determining, in some respects, her relations with foreign governments. Did we ever think of contending that Hawaii was a vassal state? Will the Cuban republic be a vassal state? No. And the South African Republic was not when the war began and is not a vassal State. A nation when the war began, it is still a nation, and in law entitled to be treated as such. As long as the gallant armies led by De la Rey, Botha, and De Wet continue in the field, as long as the battleflag of the South African democracy waves over the patriots whose chivalrous deeds have appalled the world, Paul Kruger will remain president of a republic. [Applause on the Democratic side.]

Upon this point let me recall some unpleasant—I will put it a little stronger and say disgraceful—history. During the Administration of the late President McKinley this Government was sounded as to whether Paul Kruger would be received by our Chief Executive as President of the South African Republic. The answer was no. The same question has been propounded to President Roosevelt, and it has received the same answer. I have said, and I repeat it, that when the war began the South African Republic was a nation just as England was a nation. When these two nations went to war, did that misfortune blot either from the map? If the first boom of the cannon obliterated the African republics from the map and eliminated Paul Kruger from the list of the world's lawful potentates, why did not the same fate overtake Great Britain and her sovereign? If at the outbreak of the war the status of the South African Republic was that of a nation, when did nationality become extinct? True it may be that against odds so tremendous the valiant struggle of the Boers seems hopeless, but, thank Heaven, their tormentor is indeed paying a price that staggers humanity. The war is not over, nor is the end in sight. The armies of the Republic are still in the field, and the Republics still live. [Applause.] They look to us, not for intervention—not for deliverance—but for sympathy and recognition. Who will dare to arise in the American House of Representatives and oppose the proposal to extend to the President of the South African Republics such a recognition as will undo and atone for the wrong committed by two Presidents who in the midst of a war such as is in progress over there have adopted the ravings of Chamberlain as conclusive and adjudged the South African Republic extinct, and so prematurely announced as an accomplished fact the deposition of the lawful Chief Executive of a Republic that is fighting for its life? [Applause on the Democratic side.]

Mr. Chairman, I warn gentlemen against a mistake not unfrequently made by the representatives of the people. Do not allow yourselves to commit the error of supposing that the atmosphere in high official circles in this capital, vitiated as it is by the breath of the dignitaries who are suffering from incurable Anglo phobia, is the atmosphere of the Republic. The hearts of our people have been deeply touched by the deplorable tragedy which is being enacted in far away Africa. For over two years a great Empire possessed of vast resources has been waging a war the most cruel, relentless, and unjustifiable known to the annals of the race, against a mere handful of men, women, and children. The farmers over there are fighting for liberty and the independence of their country, just as the American farmers fought for liberty and independence over a hundred years ago. Two hundred thousand British soldiers are there. They have burned and pillaged cities and towns and thousands of farmhouses. They have ruthlessly murdered thousands of non combatants, including women and children. They have armed the natives and set them upon the people, as eighty years ago they armed the Indians and turned them loose upon the frontier settlements of the United States.

The Boers are even more justifiable than the American colonists were in resisting the encroachments of Great Britain.

The army of Washington, composed of British subjects, fought to achieve independence. The Boers, born to freedom, owing allegiance to no kingly power—citizens of republics of their own creation—are fighting to retain independence.

The American colonists fought to substitute republican government for the monarchy. The Boers are fighting to prevent the substitution of a monarchy for their republics.

The claim of the British Crown to sovereignty over the American colonies was consonant with the law and was not in the nature of a forcible usurpation. The effort to destroy the South African Republics rests solely upon the accursed doctrine that "might makes right."

This tragical struggle between democracy and absolutism will determine whether the country which the patriotic Boers, amid incredible discouragements and at the cost of amazing sacrifices, rescued from barbarism and dedicated to liberty shall remain republican or pass under the domination of an alien king.

Mr. Chairman, the people of the United States have not been uninterested spectators of this fateful conflict. They have not ceased to abhor oppression and love justice. They demand that their Government, if it can do nothing to avert, shall do nothing to countenance or assist in the bloody work of the conqueror—that if it can send no word of sympathy to the unhappy Boers, it shall at least refrain from encouraging the murderer.

They are weary of the circulation of the false report that something like a partnership exists between their country and Great Britain.

From the beginning of the war down to this hour, through the joint efforts of the high public officials of both countries, evidently with the knowledge and assent of the Administration in Washington, intimations and sometimes positive statements incriminating this Republic as a sympathizer with the British Government have been adroitly published. Christendom has been told that we approve of the destruction of the Boer Republics.

A large contingent of American newspapers continually furnish seeming confirmation of this representation. The lucubrations of the Anglo-American newspapers are reproduced in the columns of the European press and go current there and in London as embodiments of American public opinion. At banquets and dinners in New York and London club rooms and hotels the members of a mutual-admiration society, composed of British and American dignitaries, who claim to speak for this Government and people, prattle cheerily about "our kinsmen across the seas," and about "our intimate relations with England," all for the purpose of giving color to the claim brazenly made by Mr. Chamberlain that England's enemies must reckon with the "English-speaking people."

The object is to create the belief that we stand ready to make common cause against all the world with the "English-speaking" butcher of the Boers as a partner.

More than once since the war began Chamberlain has felt authorized to brazenly warn Europe that, while kings and emperors and their subjects may stand aghast at the murder of the innocents in far-away Africa, "sister nations across the seas" have set the seal of approval upon England's appalling work.

Is this representation true or false? I denounce it as false, and on behalf of my countrymen demand consideration of the pending resolution, to the end that this question may be answered accordingly once for all. With whom do the members of this body and the people of this country sympathize? With the forces of King Edward VII, or with the armies marshaled in defense of country and liberty by Joubert, Cronje, Delarey, Botha, De Wet, and Paul Kruger?

Sir, the people of whom we are the representatives expect us to make answer to this question on their behalf. They would endorse overwhelmingly the passage of this resolution. There has never been an hour since the beginning of the war in South Africa when its passage would not have been endorsed. And, sir, I warn gentlemen that it is dangerous to trifle with a public sentiment which, if it be not heeded and obeyed, may break all bounds and become an irresistible tempest of anger.

High public officials can not go on, without rebuke, deliberately misrepresenting the attitude of this country upon this question for the purpose of strengthening the hands of the British Government. The time is at hand when the Republican majority in this House must arise to the performance of a duty too long evaded and give tongue to the sentiments of their constituents, or feel the weight of the people's condemnation at the polls.

I unhesitatingly affirm that throughout the Administration of the late President McKinley our foreign policy, and particularly the ultra-English tendencies of the State Department, were offensive to the people and inimical to the welfare of this country, and that the present occupant of the White House has gone even further in the same direction. The State Department has seemed to have only one object in view—the establishment of a partnership between England and the United States, and in the pursuit of this purpose has sacrificed the dignity and imperiled the welfare of the Republic.

It required a sufferer of chronic, incurable Anglomania in the State Department to rescue from the rubbish heap to which our Government had deliberately consigned it, the obsolete Clayton-Bulwer treaty, long after it had been declared void by the illustrious predecessors of the present Secretary of State, thereby affording a pretext for negotiations with England concerning the Nicaraguan Canal.

I can not at this time digress sufficiently to elaborately set forth the importance of this humiliating concession, but must content myself with pointing out that to resurrect the Clayton-Bulwer treaty, after it had been thus explicitly repudiated by our Government, was to waive the unequivocal assertion of the paramountcy of the United States in the Western Hemisphere. For this reason, if for no other, there should have been no isthmian-canal treaty with Great Britain.

To enter into one under the circumstances was to consent that henceforth England shall have a finger in the pie on this side of the ocean. It was because it would be a precedent authorizing Great Britain to claim this right, more than anything else, that made Salisbury anxious for the negotiation of a treaty, and he found in the American State Department an able and zealous coadjutor. Is it necessary to say that in order to consummate this scheme for the aggrandizement of Great Britain to the plane of equality with the United States as a North American power the acquiescence of a Republican President and his Cabinet was indispensable?

It required the selection of an Anglomaniac as our representative at the Court of St. James to bring about the announcement that there exists an "understanding equivalent to an alliance" between England and the United States—an announcement made

in after-dinner speeches at the same hour at different places in London by Mr. Chamberlain, speaking for the British monarchy, and by Mr. Choate, assuming to speak for the people of the United States.

No member of this body will dare to arise in his place and indorse this proceeding. No member of this House will assert that the people of the United States are willing to throw away the friendship of all Christendom, if only the good understanding between English and American stockjobbers may be maintained. The cult of our Anglomaniacs has become the keynote of our intercourse with the Court of St. James, not because any considerable number of our people indorse it, but because among other evils resulting from recent political triumphs of the stock exchange is the substitution of Anglomania for Americanism.

Mr. Chairman, returning to the resolution, I desire to direct attention to its relevancy to the latest spectacular invention of the managers of the Anglo-American hippodrome. I refer to the special embassy that is to help celebrate the coronation of King Edward.

For over two years, by conducting a kind of continuous show, with Uncle Sam and John Bull billed as cronies as the principal performers, high public officials of both countries have propagated a falsehood.

The world has been given to understand that this country has no fault to find with English atrocities in South Africa. And does anybody here deny that this falsehood has been given currency? If so, I call attention to the fact that only a few days ago, in a speech delivered in London, Mr. Chamberlain explicitly notified foreign countries that, while England's war upon the South African Republics might displease all others, it is approved by the United States. I quote from his remarks as reported in an Associated Press telegram:

> Was it a necessary, just, and inevitable war? He did not think that he need stoop to meet the imputation of national greed and lust of territory, still less of personal ambition or mean and even criminal motives. The war had been supported by the conscience of the nation as a whole, and England had more impartial authority in the approval of sister nations across the seas.

I brand this statement as false, and the pantomime of the English and American dignitaries who for two years have constantly given it circulation as a travesty devised for the purpose of propagating a lie.

The significance of Mr. Chamberlain's utterance is not to be destroyed by the contention that he had no authority to make it. It is in line with the public utterances of those high in authority. In the eyes of the world, every line of the history of our State Department—every step in the development of our foreign policy—during the past four years, authorized him to say it.

Mr. Chairman, I call upon the Republican majority of this House, and especially upon the members of the Foreign Affairs Committee who have this resolution under consideration, and have power to either smother it or report it back to the House, to make suitable answer to Mr. Chamberlain's assertion that, in all the world, England's war upon the Boers is justified by only one nation—the American Republic. Let us speak, that the truth may be known.

Sir, America distrusts Great Britain. It is a distrust born of experience—a distrust so deep seated that though Tories at home and his Majesty's ministers in London may declaim till doomsday about kinship and identity of language, Americans will abide in the knowledge that when this Republic was in its infancy England was our only enemy, and will continue to entertain the ineffaceable belief that she is not, never has been, and never can be our friend.

Mr. Chairman, in support of the charge that conspirators have throughout a protracted period misinformed the world as to the attitude of the people of the United States, and given Mr. Chamberlain warrant for the assertion that England's butchery of the Boers has our approval, I submit that a succession of events and numerous public utterances of those who have shaped the foreign policy of the Government, here and in London, all tending in the same direction, are conclusive.

If it is not so, tell me how the impression has gained currency throughout the world that in case of war between England and any one of the great continental powers our sympathies would be with England? If it is not so, where did Mr. Chamberlain find warrant for a declaration which, if true, brands Americans as so loyal to the British Crown that even the murder of a race by the British soldiery seems good in their sight—a declaration made all the more significant by the fact that it was part of a speech the chief burden of which was complaints about European criticism of the South African horror?

Gentlemen of the House of Representatives, how does it happen that executive officers of this Government may become parties to such proceedings as I have referred to? How does it happen that, imitating the diplomacy of monarchical Europe, where visits of royalty are accepted as interpreters of state policies, the agents and servants of this free people have assisted in keeping before the world for three or four years continuously this pantomime, and now propose to go even a step further by joining in the festivities of the English King's coronation, for the purpose of giving color to the story that there exists something equivalent to an alliance with England?

Who is sovereign in this Republic—the President or the people, speaking through their representatives?

Mr. Chairman, in the Congress of the United States, and not elsewhere, is reposed by the Constitution the authority to finally determine all such questions. Has the Congress abdicated all of its functions except the imposition of taxes and provision for defrayment of the expenses of a Government which henceforth is to be administered on lines marked out at the White House? Are the United States to be henceforth enemy or friend to a foreign country as may seem best to the Executive?

In addition to the foreign diplomatic service authorized by law, is the Executive to feel authorized to send abroad, upon his own motion, at considerable expense, at a critical juncture in international affairs, as a particular mark of his good will toward a particular country, and with the certainty that in connection with what has preceded the event it will be interpreted as further evidence that we are practically England's ally, special ambassadors to assist in celebrating the coronation of an English King—all this without the authority of Congress—and, what is far more important, all this to enable Mr. Chamberlain to repeat the preposterous statement that England's war upon the Boer republics "has the approval of a sister nation across the seas?"

Less than a decade ago such a proceeding would have been deemed impossible, but this is precisely what is on foot.

Has not the hobnobbing between the State Department and Mr. Chamberlain's Government gone a little too far? Do the gentlemen on the other side of this Chamber, not one in ten of whom approves this latest invention of the managers of the hippodrome, but not one of whom has the courage to condemn it, expect the country to ignore this proceeding?

Gentlemen, the people know as well as you do that by sending to England distinguished representatives of the Anglomaniac element of our population to be present at the coronation of Edward VII we go one step further in entangling ourselves with England and add to the causes of estrangement in other quarters. They know that this extraordinary proceeding will not be regarded or treated as meaningless in the Old World. They know that the diplomats who concocted this junket to the English court did not intend that it should be regarded as meaningless. They know that this climax of Anglomania was devised for the purpose of parading before Europe fresh evidence of our "intimate relations" with Great Britain.

Why, Mr. Chairman, the mere fact that it is distinctively a new departure is sufficient to give it this appearance. Within the past century the coronation of kings and emperors has been of frequent occurrence, yet this Republic has never been represented upon any such occasion by special ambassadors. In compliance with custom, our regular ambassadors at foreign capitals have witnessed such ceremonials; but we have done nothing to indicate especial interest in them. We have not regarded the coronation of kings as a consummation sanctioned by the creed of republicanism. Instead of participating in celebrations and rejoicing at the coronation of kings, we have rejoiced when kings have lost their crowns. [Applause on Democratic side.]

Instead of lending ourselves to the preparation of pageants devised to proclaim the doctrine of the divine right of kings, we have spurned hereditary rule as in the nature of usurpation and the pretensions of hereditary aristocracy as subversive of the natural rights of mankind. We have denounced as monstrous and unnatural a system which relegates to the accident of birth the selection of the rulers and lawgivers of the race. We have ridiculed and denounced as violative of reason and destructive of the rights of society a system which imputes to the sons of kings and noblemen alone attributes which are the common heritage of the race.

Since this Republic was founded Russia has crowned three or four Czars. Russia during our generation has given more striking and frequent evidences of friendship than any other monarchy in the world, but no special representatives have been sent to St. Petersburg to participate in these functions. France, our friend in the dark days of the Revolution, has undergone the same humiliation three times, but no special representatives of this country have been present. Germany, Italy, Austria, and the rest of the monarchies across the seas—each has suffered the same ignominy more than once without a special representative of the United States being among the witnesses.

So, Mr. Chairman, it is indeed a new departure—this junket of the special ambassadors who are to stand uncovered among the titled flunkies and hereditary lords and ladies on the occasion of the coronation of Edward VII, and assist in proclaiming him the Lord's anointed.

It will be something new and decidedly novel for representatives of this Republic to cross an ocean for such a purpose. Gentlemen, let us be thankful that when our special ambassadors shall thus signify acquiescence in the ceremony by which a portly, well-groomed accident is to be proclaimed King of Great Britain and Emperor of India, called by the grace of God to his high station, they will speak for only a handful of Americans.

Mr. Chairman, after all this mummery shall have been enacted, the American citizen, conscious of his dignity as a man, the equal in the sight of God of any other, will keep right on regarding royalty as absurd and the pageantry of courts as the hateful symbol of a system accursed in the consciences of all true democrats and republicans, and the American people will still continue to regard His Majesty King Edward as the luckiest, because the firstborn, son of a respectable old lady who, by accident, was a queen, and as the member of a family whose prodigious fecundity has within the span of a single life stocked the monarchical world from St. Petersburg to the Rhineland with royalty of the most approved brand without producing a single man or woman capable of winning distinction or arising above the dreary level of mediocrity.

We all know that when any one of the great powers across the waters desires to show to the others its partiality for a neighbor, and particularly for an ally, royal visits are the order of the day. If God's annointed can not go, the heir apparent is sent. The same proceeding is resorted to when bad blood has been engendered and there is a mutual desire of governments to obviate serious estrangement. Not long ago Joseph Chamberlain attempted to justify the butchery of the Boers and the murder of their women and babes by charging that Germany had similarly treated the French thirty years ago. Instantly Germany was ablaze with anger, and German newspapers and the German people have been denouncing everything English ever since. In the midst of the uproar, for the avowed purpose of quelling the storm, the Prince of Wales visited and was entertained by his cousin, the German Emperor.

Half a dozen times within as many years the Czar has visited France for the purpose of serving notice that France is Russia's ally.

Mr. Chairman, perhaps the new rôle we are playing makes it necessary for us to follow this practice. We are told by gentlemen that it required a successful war with a third-rate monarchy to entitle us to a respectable place among the nations—that now, for the first time, the United States is "a world power." "World powers" of the kind that go about as marauders have partners. England is our partner. Chamberlain has said so; Choate has said so; Anglomaniacs at home and abroad have said so. Our partner fears that a storm is near at hand; therefore we are to help celebrate the coronation of Edward.

And, sir, this extraordinary manifestation of our affection for England is proffered at an opportune time. The "mother country" is in trouble. She is surrounded by bad neighbors. The plain people of Christendom—whether the subjects of kings or the citizens of republics—are appalled at her crimes against humanity. The blood of a heroic race is upon her hands. The wails of the unfortunate women and pitiful babies who are perishing by thousands in prison pens, while their husbands and fathers are fighting and dying for liberty with a bravery unheard of in the world's history, appeal to the great heart of Christian humanity for succor. Students of the history of England's crimes are setting before the world afresh the annals of a conqueror, the victims of whose murderous sword are as the sands of the sea.

The fear of Great Britain is that the patience of the world will not last much longer.

Was our participation in the celebration of King Edward's coronation prepared for the purpose of averting the possibility of an attempt to save the Boers from utter annihilation?

Whatever the purpose, it will be regarded at every capital in the world as evidence that in any emergency that may arise England can count on the friendship of the United States.

Is a course that is calculated, and I believe intended, to create the belief that we would look with disapproval upon an effort of the great powers to terminate the war, justified by the opinions and sentiments of the people of this country?

Who will dare to assert that in case of intervention by European powers Americans would not say, Amen and Amen! I do not mean to say that the Executive or the Secretary of State would approve of intervention, but the American people would, in thunder tones, and in this Republic the people, thank Heaven, are sovereign.

Mr. Chairman, undoubtedly this spectacular parade of our love for England was deliberately formulated. The people will understand it all. They know that the invitation to send special ambassadors to the coronation was not given casually as one might invite a friend to dinner. First the White House was sounded on the subject to see how the invitation would be received. The President must have signified his willingness to play into the hands of British diplomacy by its acceptance, thus furnishing a most signal exhibition of our partiality for Great Britain. The formal invitation was only the consummation of this diplomatic deal by which, for the first time, this Republic is to send to a European court special ambassadors who, in the name of this great nation, will take part in a ceremonial hateful to every true lover of liberty and democracy.

Mr. Chairman, it is unfortunate for our Anglomaniacs that on the eve of the coronation the country is called upon to read irrefragable proof that after all the coronation is not such a family affair as to necessarily concern our branch of "the English-speaking people." The pretty story that our kinsmen so love us that during the war with Spain England was our only friend has been exploded. And, Mr. Chairman, in this connection I now desire to call attention to the false pretenses which have been put forward by the Anglomaniacs to justify the beatification of John Bull.

At first, as a means of creating a public sentiment favorable to Anglomania, only platitudes and glittering generalities were available. "Kinsmen across the seas," "English-speaking people," "the best patrons of our markets;" these were some of the phrases so constantly dinned into our ears, that I think everybody would like to send them to the rubbish heap in which have long reposed "*vox populi vox Dei*" and "*tempus fugit*" and a long list of hackneyed phrases with which people with nothing important to say have afflicted the world.

The Spanish war came, and hardly had the thunder of naval artillery which immortalized Dewey and Schley, ended the war, and proclaimed Columbia the coming queen of the seas, died away—when up popped the Anglomaniacs and assured the country that all that saved us from destruction was the staunch friendship of England!

England had stood guard while we whipped Spain!

England had prevented intervention by a coalition of European powers, and so forth, and so forth, and so forth.

The people of the United States were solemnly assured that we owed our salvation to "the mother country," and told by the Anglomaniacs to be correspondingly grateful.

Lately the truth has been leaking out, and what a story of perfidy it is. It seems that on the eve of hostilities Austria sounded Great Britain as to the expediency of a concerted action of European countries to prevent the war—a movement in the interest of Spain and decidedly hostile to the United States. Did the Salisbury ministry refuse? No. The reply was, that should such a movement be inaugurated Great Britain "would not separate herself" from the other great powers of the Old World. This occurred on the other side of the ocean.

The scene shifts to Washington. The representatives of foreign countries here had the matter under advisement. An effort was made to form a coalition similar to that proposed abroad. Did the British ambassador, who undoubtedly knew the sentiments of his Government, refuse to participate in the enterprise? No. On the contrary, he prepared the circular note which was cabled to foreign Governments for approval or rejection. I will here incorporate in my remarks the text of this circular note:

> The attitude of Congress and the resolution of the House of Representatives passed yesterday by a large majority leaves but little hope of peace, and it is popularly believed that the war-like measures advocated have the approval of the great powers. The memorandum of the Spanish minister delivered on Sunday appears to me and my colleagues to remove all legitimate cause for war. If that view should be shared by the great powers, the time has arrived to remove the erroneous impression which prevails that the armed intervention of the United States in Cuba commands, in the words of the message, "the support and approval of the civilized world."

It is suggested by the foreign representatives that this might be done—

> by a collective expression from the great powers of the hope that the United States Government will give favorable consideration to the memorandum of the Spanish minister, of April 10, as offering a reasonable basis for an amicable solution, and as removing any grounds for hostile intervention which may have previously existed.

Mr. Chairman, this note was prepared by the British minister, and after a conference of the representatives of the great powers was cabled to the chancelleries of Europe. The movement was killed outright by the prompt refusal of the German Emperor to have anything to do with it.

In the cablegram transmitting it the German ambassador expresses disapprobation of the movement, saying:

> Personally, I regard this demonstration somewhat coldly.

To this concluding sentence of the ambassador the Emperor appended the following marginal note:

> I regard it as completely futile and purposeless, and therefore prejudicial. I am against this step.

Russia also refused to participate in the enterprise.

And so, Mr. Chairman, it was Germany and Russia and not England that stood between the United States and the scheme of intervention proposed by Austria and sanctioned by the British

ambassador. The people will be glad to know that it was the German Emperor and the Czar and not King Edward who refused to give offense to the United States.

In the presence of this disclosure how appropriate is the epithet which long ago boiled down into two words the contempt of the world for British diplomacy: "Perfidious Albion."

How brief, yet how complete it is—this laconic summing of mankind's estimate of Britain. False to her allies, faithless to her friends, freebooter, tyrant, the scourge of the planet! Obedient only to the promptings of avarice, yet professing always undying devotion to the welfare of mankind, England has visited upon the weak and defenseless in every quarter of the globe the horrors of war waged for pillage and territorial aggrandizement, and invariably without in the least acknowledging the restraint of the usages of civilization.

The sack and pillage of cities and towns, the destruction of farmsteads and household effects, the uprooting of orchards, the imprisonment and deliberate and intentional starvation of women and children, the assassination of prisoners of war and unarmed noncombatants, including patriarchs of 80 and boys in their teens—these are the methods by which at this very hour the Boers are being exterminated. The British are doing there precisely what they did in Ireland two, three, and four hundred years ago—what they have done repeatedly in India—what they did in the Upper Nile country three years ago. They are creating, by the use of the faggot and the torch, the desolation of the desert and murdering the inhabitants by wholesale—noncombatants as well as those in arms—the old and the young, regardless of sex.

Mr. Chairman, such are the crimes of the country which Anglomaniacs tell us has been and remains the great civilizer of the world.

Many well-meaning people, who imagine they have learned the truth by reading English versions of England's transgressions accept this view, but certainly nobody familiar with the history of British rule in Ireland—nobody who has read of the horrors of her campaigns in India or of the more recent butchery of thousands of unarmed men, women, and children in the Upper Nile country—will testify that English bayonets are the harbingers of happiness.

I declare, sir—and history supports the assertion—that in every decade of the period of her opulence England's hands have been stained with the blood of men and women murdered in cold blood for the purpose of robbery and pillage, and that in comparison with the crimes of this mercenary power the deeds of mediaeval barbarism and cruelty seem tame and the sanguinary crusades of the Moslems harmless. [Applause on the Democratic side.]

Every homestead in Ireland has been the scene of a tragedy—every acre of the beautiful island has been drenched with the blood of patriots, murdered by British soldiers.

I have read recently reprints of the reports rendered by British generals who were sent over to Ireland, and letters describing the British campaign of last year in South Africa—the voluntary testimony of English butchers as to their own inhuman deeds—and I solemnly declare that the army commanded by Kitchener is doing precisely what was done by English commanders in Ireland two, three, and four centuries ago.

Let me read sufficiently from the record of British infamy—a record of horrors boastfully made by murderers wearing the British uniform—to prove the justice of this accusation. I quote from Froude, who gives copious excerpts from reports made to the British Government by the commanders of the British forces in Ireland.

The following from Malby's report shows how the blessings which we are told by Anglomaniacs accompany British rule over conquered countries were bestowed upon Ireland when the great Elizabeth was Queen:

I thought good to take another course, and so, with the determination to consume them with fire and sword, sparing neither old nor young, I entered their mountains, I burned all their farms and houses, and committed to the sword all that could be found. * * * In like manner I assaulted a castle. When the garrison surrendered, I put them to the misericordia of my soldiers—they were all slain—thence I went on sparing none which came in my way, which cruelty did so amaze their followers they could not tell where to bestow themselves. * * * It was all done in rain and frost and storm, journeyings in such weather bringing them the sooner to submission.

Here again is an excerpt from another well-known English authority.

The Pacata Hibernia—

Says Sir George Carew, president of Munster and commander of the English forces there—

having received certain information that the Munster fugitives were harbored in those parts, having before burned all the houses and corn, * * * diverted his forces into East Clanwilliam and Muskeryquirke, and harassing the country killed all mankind that were found therein for a terror to those as should give relief to the runagate traitors. Thence we came to Aherleaghe Woods (the beautiful glen of Aherlow) where we did the like, not leaving behind us man or beast, corn or cattle.

Here again is an extract from a letter written in 1607 by Lord Deputy Chichester, who commanded the English forces in Ulster:

I have often said and written it is famine must consume the Irish, as our swords and other endeavors worked not that speedy effect which is expected. Hunger would be a better, because a speedier, weapon to employ against them than the sword.

He says:

I burned all along Lough Neagh, within 4 miles of Dungannon, * * * sparing none of what quality, age, or sex soever, besides many burned to death. We killed man, woman, and child, horse, beast, or whatever we could find.

Let no admirer of the English Government attempt to turn his back upon this indictment, penned as an official report by a British general, by saying, "Oh, that was when the whole world was addicted to unnatural violence and cruelty." The same policy of extermination is being followed by the British to-day in South Africa, and I propose to prove this charge also, not by the testimony of England's enemies, but by quoting from the letters of British soldiers.

The murder of the Boers at the battle of Elandslaagte, after they had thrown down their arms and offered to surrender, is still fresh in the minds of all who have kept up with the history of the war. The victims were not shot, but impaled by the Queen's Lancers, one by one, and letters from the wretches who did the killing were printed in the English newspapers, describing the atrocity as "pig sticking." This was at the very beginning of the war, and in the two years that have followed the horrors of Elandslaagte have been repeated scores of times.

The publication of letters from the murderers, boldly narrating their bloody exploits, is a common occurrence. Here are some of the excerpts from letters from British soldiers which appear in Mr. W. T. Stead's pamphlet exposing the barbarous methods of Kitchener's army:

Private C. Chadwick, of the then Grenadier Guards, writing from Modder Camp, says: "The Boers cry for mercy when they know they have no chance of shooting you down, but we stick the bayonet through them."

Private G. Washington, of the Twentieth Battalion of the Caledonians, says of the four battles fought by Lord Methuen: "In the last two fights we used the bayonet freely as we advanced, and the Boers begged for mercy in vain."

The Montreal Herald of December 7 published a letter describing what is an aggravated case of refusal of quarter:

"'Letter from Burt Holland, Canadian Mounted Rifles, to his parents in Ottawa, describes the shooting of the 'worst sniper' in his district. Driven into a boggy spot and his horse got stuck, he pitched his rifle away and threw up his hands, supplicating for mercy. The boys rode up within 100 feet of the old wretch and commenced firing. At first they shot him through the arms and legs, thence through the stomach, and when they thought they had sufficiently punished him, they put a volley through his heart, fairly riddling it. Then they proceeded to his house, where they found his son hiding under the bed, with a bandolier on and a rifle in his hand. They took him into camp and the chances are he will be shot.'"

A correspondent writing in the Daily News on this subject claimed that the point of view of General Hamilton and, indeed, of all soldiers as far as the writer knew, was expressed in a passage written by a correspondent who signed himself "J. B. A." in which he described General French's ride into Kimberly. He said:

"When the Boers had emptied a few saddles they put 'up a white flag.' But the work of cavalry can not be stopped at the goal itself. All the Boers there—some say thirty-two, some say thirty-seven—were spitted." The writer goes on to defend this.

"Truth prints an extract from a letter written by Charles Floran, a trooper of the Canadian Mounted Rifles. It bears date February 15, and first appeared in the Evening Herald, St. Johns, Newfoundland: 'We took 20 prisoners last Thursday. Three of us took two from a house, with the guns, bandoliers, etc. Their mother and sisters begged us to leave them; the old lady put her arms around my neck and kissed me, and begged me not to take her sons. They cried and yelled as if we were going to kill them, which we had a right to do. If we caught them on the veldt with their rifles we should have shot them, as we have orders not to take any prisoners.'"

I refrain from commenting upon this awful recital. To merely print it is to brand the British soldiery in South Africa as more cruel and inhuman than the meanest savages.

Now let us see how the women and children are faring. The South African Republics have been converted into a desert. Towns, cities, and farmhouses have been destroyed, orchards have been uprooted, growing crops have been ruined, all agricultural implements and vehicles have been burned, all domestic animals have been carried away to British garrisons or killed. For a year and more the British soldiers have been engaged in this work of wholesale destruction, and to-day there are not standing in the Boer Republics buildings enough to house one-fourth of the inhabitants.

The men whose homes have been thus destroyed are in the field fighting for their country. The women and children over whose heads the houses have been burned are in prison pens dying like flies of disease and starvation, and I declare that these are deliberately doomed to death by the British commander. Here is the proof.

Mr. Chairman, I quote from a pamphlet written by Mr. W. T. Stead, the eminent English publicist, to which I referred a few minutes ago. Mr. Stead has compiled from official and authentic sources a history of this awful crime. As to the imprisonment of the women and children, Mr. Stead says:

When the helpless women and children were first incarcerated in these prison camps, discrimination was carefully made between those who had

husbands, brothers, and fathers still on commando and those whose male relatives have either been killed, taken prisoners, or surrendered. Those in the latter category were supplied with what is called a "full ration." That is to say, they were given the beef, flour, coffee, and sugar which was considered necessary to maintain adult men in health. These full rations were declared by Dr. R. P. Mackenzie, the district medical officer of the Boer camp in Johannesburg, in a letter which he addressed to the military governor, to be insufficient to keep the refugees in health.

Major Cavaye, the officer charged with the distribution of the imperial relief fund at Johannesburg, admitted, when receiving a deputation on the subject, that the ration scale which he had received from Lord Kitchener in Pretoria was not sufficient to keep body and soul together, and that he had, on his own responsibility, given the refugees some flour to mix with their maize meal.

But let us assume that the full ration represented the irreducible minimum upon which the Government would feed its prisoners of war. It was then deliberately determined, apparently upon the authority of Lord Kitchener, and with the sanction of Mr. Brodrick, to subject the women and children whose husbands and fathers were still "obeying the orders of their government in defending their country against the invader" to a policy of systematic starvation.

To a woman whose husband was on commando, to the helpless child of a man who had not yet laid down his arms, the decree went forth that they should be deprived of one-half of the rations necessary for their proper sustenance. Starvation was thus deliberately employed as an engine of torture, in order, by the suffering inflicted on their women and children, to induce their men-folk to desert the ranks, and for pity's sake to sacrifice the cause of their country. We could neither kill, wound, nor capture the burghers who were still in the field, but we could catch their women and their helpless little children. Having caught them, we could pen them in our substitute for the Spanish inquisition, the prison camps.

Instead of stretching them upon the rack, using the thumbscrew, or applying the red-hot iron to the soles of their feet, we achieved the same result by inflicting the refined and horrible torture of slow starvation. Under this peine forte et dure the children sickened, pined away to living skeletons, and then, happily, were released by death from their sufferings. Every one of these children who so died as the result of the cutting down of rations by half in order to bring pressure to bear upon their relatives in the field was as deliberately murdered as were any of the Irish babies whom General Carey spitted in the campaign against the renegade traitors of Munster.

The prison camp itself may not have originally been intended as a place of torture or as a means of putting pressure upon the burghers; but the half-ration system stands revealed, naked and unashamed, as a deliberate act of State policy employed for the purpose of compelling the surrender of foes whom we were unable to overcome in the field.

And the appalling consequences of this policy are faithfully stated in the following letter, which was published in the Birmingham Daily Post, Gazette, Mail, and Argus, October 2, 1901:

SIR: The official report for August on the concentration camps in South Africa has just been issued, and the increasing death rate shown induces us to ask you to allow us to call the attention of our fellow-citizens to the present lamentable state of things. One thousand eight hundred and seventy-eight white people died in these camps during August, of whom 1,545 were children. The death rate for the children works out to 355 per 1,000 per annum. In the Transvaal camps alone there were 1,014 deaths among 25,983 children, or 468 per 1,000 per annum, at which rate the whole of the children would die off in little more than two years.

These awful figures can not be traversed by any special pleading; and if England shuts her eyes to them, they will not be misunderstood anywhere else. In July the total mortality of children was 1,124, which was specially attributed to "measles and pneumonia supervening during excessively cold weather." The plain English of this is that many of these unfortunate children, whose homes have been burned, and who are in these camps, not by their own desire, have met their death because proper food and clothing have not been provided for them.

Our Government has refused to allow Miss Hobhouse, the lady who has proved herself competent to mend matters in the camps, to return thither, and it has lately stopped a doctor and six nurses whom the Swiss are sending out to try to save a few of the children's lives. In the meantime we have the terrible increase in the August mortality as compared with that of June and July.

Surely the time has come when English people will rise up and protest against the policy of devastation which has provoked such desperate resistance and has caused such terrible suffering. There must be many who thought the war was unavoidable in the first instance who are yet heartily ashamed of treating their foes in a way which Gen. Sir Neville Chamberlain points out to be unprecedented in the annals of English warfare, and especially of this practical "massacre of the innocents."

No right-minded Englishman wishes to exterminate the Boers or to do them anything but justice. Why, then, should not our Government bring the conflict to a close by accepting some reasonable settlement? Would not this be better than losing South Africa?

R. F. MARTINEAU.
E. HENRY LEE.
JOSEPH STURGE.

18 HIGHFIELD ROAD, EDGBASTON, *October 1.*

Oh, what a spectacle is this! What an orgie of blood! The wild beasts against which the early settlers of South Africa contended were not more savage than the authors of so much misery.

The savage beasts that roam the woods
And howl at night and a' that,
They never fight their female kind
Nor kill their cubs and a' that.

Surely no American can read this story of British brutality and infamy without ever afterwards entertaining sentiments of pity and contempt for the Anglomaniacs who pretend to believe that wherever the British flag waves over conquered races the people are enjoying a foretaste of the millennium. And, mark you, the documents I have read are English documents of undoubted authenticity, and the policy I am denouncing is bitterly condemned by a considerable number of the citizens of Great Britain, who do not hesitate to charge their Government with the premeditated murder of these imprisoned babies.

Mr. Chairman, Americans who can read the documents I have read in your presence and then read Chamberlain's declaration that England's war of extermination has the approval of the United States without shame and indignation are to be pitied. I do not believe the Republic has many such within her borders, and certainly hope that not one occupies a seat in this Chamber.

And this impudent declaration of the English secretary is to go unchallenged! Nay, more! As if to confirm it, instead of sending a remonstrance against these crimes our Government is to send a deputation to the English Court and help celebrate the coronation of the King whose Government has thus transgressed the law of nations! And we are to do this knowing that it will be taken as proof that we sympathize with England!

Mr. Chairman, pages of the CONGRESSIONAL RECORD might be filled with similar reports which were sent to England before the censorship was extended so as to include the private correspondence of the British soldiers, but it is unnecessary. As an appendix, I will print with my remarks other similar documents. I have presented sufficient testimony to prove that an army of house burners, robbers, and murderers, and not an army of honorable soldiers, are at work in South Africa. The laws of civilized warfare are being violated. Every rule and principle laid down by The Hague conference has been ignored by England, one of the signatory powers.

Now, I desire to inquire, sir, why is it that, notwithstanding the covenant entered into at the Hague conference, binding each of the signatory powers to obey these rules and binding each and all to see to their enforcement, the civilized Christian world remains mute while this heartrending carnival of blood goes on?

Can this Republic escape its share of responsibility? I believe, sir, that we have stood in the way of others. The pretense that there exists an understanding equivalent to an alliance with the United States has been as a bulwark against intervention. Reverse our position and who can say what the result would have been.

I solemnly declare that I believe that if only the truth could be known throughout the world concerning public sentiment in the United States—if only it were known that nine-tenths of our people profoundly sympathize with the Boers and would rejoice at their triumph and the overthrow and destruction of the British army—the South African republics would be speedily delivered out of the hands of Kitchener's cutthroats.

Certainly the time is near at hand when the masses the world over will refuse to accept as explanations of the bloody deeds of the conqueror platitudes and homilies such as constantly fill the mouths of these modern freebooters and robbers.

Away with the pretense that murder is the conservator of civilization; that the subjugation and enslavement of races is the most lofty exemplification of Christianity; that the exploitation of the resources of conquered countries for the enrichment of a mere handful of speculators and adventurers is inspired by a desire to elevate and ennoble the victims of the robbery.

Shame upon the hard-faced hypocrisy which sends forth upon the bloody errand of the conqueror armies which fight the battles of greedy money getters, while kings, cabinets, ministers, and even the orators of parliamentary bodies put forth the blasphemous pretense that wide areas are being desolated and races exterminated to the end that liberty and civilization may bless the world! To hell with the propaganda of the stock exchange, which justifies wholesale murder committed solely for the purpose of promoting schemes of plunder upon the pretense that the victims of Mammon's sword are impediments to the onward march of religion! [Applause on the Democratic side.]

Mr. Chairman, the world will never know the whole truth concerning the atrocities of the army whose commander stands before the world convicted of assassinating noncombatants, and deliberately and premeditatedly murdering the wives and babies of men who, on scores of bloody battlefields, have proven themselves the bravest of the brave. Nor will it ever know the extent of the sacrifices of the Boers, who, amid the scenes of desolation I have faintly portrayed, have remained true to the most exalted ideals of enlightened humanity.

By deeds of valor unsurpassed—by the evincement of the indomitable courage which in the very article of death has wreathed in smiles the countenances of martyrs—by their manifest willingness to give their lives as a sacrifice upon the altar of patriotism—the heroic men and women who, amid a sea of fire, are perishing, one by one, in the defense of the South African republics, have enrolled themselves among the number of the world's immortals.

Long after the British statesmen now in power shall have been forgotten, or are remembered only on account of their crimes and wickedness, Kruger, Joubert, Cronje, Botha, De la Rey, and De Wet will be remembered. From generation to generation, as long as time shall last, gray-haired grandsires will tell to prattling boys the story of their lives, and those who fight the battles of humanity, whether in field or forum, will render to them forever the homage due to the exemplars of the sacred duty of self-sacrifice which rests upon free men when liberty is assailed. God save the

South African Republics! But even though they shall pass away—crushed, assassinated by the hosts of the oppresser—the names and achievements of their defenders will forever inspire the veneration bestowed by mankind upon martyrs who go to the stake for the sake of conscience and heroes who die on the battlefield in the defense of liberty. [Applause on the Democratic side.]

Mr. Chairman, it has been decreed by the President that this Republic shall help to celebrate the coronation of the King whose soldiers are murdering the countrymen of President Kruger. Our representatives on that occasion will bear no commission from the people or their representatives. The Congress was not consulted. The President has spoken for the small number who love England. Now let the House of Representatives speak for the people of the United States of America, who love liberty. Regardless of party difference, they are the friends of the Boers and would rejoice at an opportunity to welcome to our shores the grand old man whose name henceforth will be linked to the name of Washington. [Prolonged applause on the Democratic side.]

APPENDIX.

"Methods of Barbarism" is the title of a pamphlet written and circulated throughout Great Britain recently by W. T. Stead, the eminent English writer and publisher. The following is from this pamphlet:

CHAPTER V.—THE POLICY OF DEVASTATION.

"All wanton destruction and injury to peaceful inhabitants are contrary to British practice and traditions, and will, if necessary, be vigorously repressed by me. It is the desire of Her Majesty's Government and my intention to conduct this war with as little injury as possible to peaceful inhabitants and private property." (Lord Roberts's letters to the Presidents, February, 1900.)

Last December I published a pamphlet entitled "How Not to Make Peace," an examination of the evidence concerning farm burning in the Transvaal and the Orange Free State. Since that time seven months have elapsed, and during the whole of that period the diabolical work has been going on unchecked. Concerning this there is absolutely no manner of doubt. The official telegrams from Lord Kitchener, which report little else than the dispatch of columns to sweep and denude the country, with details as to the number of head of stock they have been able to steal as the result of their cattle-raiding operations, make it impossible for anyone who cares to ascertain the truth to doubt what has actually taken place. Farm burning in a strictly technical sense may have been forbidden. Farm destruction in the real sense has gone on merrily all the time. Nothing more distinctly showed the moral and political decadence of Mr. Henry Asquith than the passage in his speech at Liverpool Street Hotel, in which he referred to farm burning as a thing which had lasted for some weeks last year, and had been finally put a stop to. His only reason for saying this was that the war office published an absurdly imperfect return, giving particulars of some 630 farms which had been burned in five months last year and the two months of this.

As the return contained no particulars of any farm burning after February, it was complacently assumed that no farms had been destroyed since then. As a matter of fact, it is probable that more farms had been destroyed since February than there were before. The proof of this is to be found first in Lord Kitchener's telegrams as to the operations of his destroying columns; secondly, in the letters of soldiers engaged in that work of devastation; and, thirdly, in the official report made by the State Attorney Smuts, as well as several letters from Boer sources. The result, we are assured by correspondents in Pretoria, is that two-thirds of the two Republics are a blackened waste to-day. Before proceeding to describe the farm destruction that has gone on since the issue of the war office return, it may be well to note that that return effectually demolishes the plea which is put forward in justification of house burning. In only 77 cases is there even a pretext that any justification existed for the burning of farms. In over 500 cases the farms are described as being burned for reasons which are in flat contravention of the Hague rules. The Government stand convicted of employing methods of barbarism on their own official returns. But this return is obviously incomplete. It is not brought up to date, and we have records of many farms which have been burned by our troops about which the report is discreetly silent.

The farms that have been burned by our troops may be numbered by thousands, not by hundreds, and the fact that a man trained in the law and as expert as Mr. Asquith with the sifting of evidence will allow himself to be befooled by so transparent a fraud as the war office return is a melancholy illustration of mental and moral wreck.

Figures, however, convey very little idea to the mind. In order to understand what the policy of devastation is it is better to give concrete instances. Now, fortunately, we have a very vivid picture of one of the most famous instances of barbaric methods—the burning of an entire town, which is painted by one who took part in it and who entirely believed in the necessity of the work in which he was engaged.

I therefore quote here extracts which can not be accused of being garbled, inasmuch as they carefully preserve all the passages, the omission of which led to such a dishonest outcry on the part of the jingo press. Lieutenant Morrison is a Canadian editor who contributes at great length to his paper a description of the burning of the town of Dullstroom. A local correspondent summarizing this lengthy epistle for the New York Sun, omitted any reference to the fact that Lieutenant Morrison approved of the work of devastation he described so graphically, and also omitted to mention that when the houses were burned there were several explosions of gunpowder, showing that the Boers of Dullstroom, like the rest of the burghers, had obeyed the law which required them to keep a certain quantity of powder in their houses. The letter in extenso deepened rather than weakened the effect of the summary. But I have not room for it here, and I therefore make my own extracts from the original, and defy the most hypercritical person to say that in doing so I have garbled or suppressed anything necessary to enable the reader to understand either the crime which Lieutenant Morrison described or the sympathy with which he recorded the criminal act:

"BELFAST, *November 21.*

"Bright and early on Tuesday morning we marched off. Colonel King commanded the advance and General Smith-Dorrien the main body. We were bound for the Steilpoort Valley, north of here, and were to come round by Wilpoort and Dullstroom, halfway to Lydenburg. The valley is about 6 miles wide and 25 miles long. It is fertile and well watered and full of fine farms. When our little force used to go out on reconnoissance and get into the rough and rocky hills overlooking the valley the well-fed burghers would swarm out of the farms in the valley and have a bit of fun with us. That we did not have many casualties was not their fault. It was also some of them who killed two of the dragoons by dressing up in khaki and enticing them over to the kopje, where they shot them down in cold blood.

"The advance guard had just got into the hills when our friends were out as usual with their tails up, sniping from behind every rock, but when the guns and pom-poms came into action at a gallop and soused the kopjes with shells, they discovered that this was the time they were up against it. They retreated from one position to another, and we followed them up all day, the advance guard on the right and the main body on the left. About 4 o'clock the main body debouched into the big valley, and we sat on the hills and covered the transport, becoming in turn the rear guard toward night. The heavy rain on our faces wakened us several times during the night, and it was a very wet, muddy, stiff, and bedraggled crew that old Sol sighted when he peeped over the hills in the morning.

"There were a number of very fine farmhouses near by, and we saw the Boers leaving them and making off. The provost-marshal came up from the main body, removed the Boer women and children with their bedding, and proceeded to burn or blow up the houses. From that on during the rest of the trek, which lasted four days, our progress was like the old-time forays in the Highlands of Scotland two centuries ago. The country is very like Scotland, and we moved on from valley to valley, "lifting" cattle and sheep, burning, looting, and turning out the women and children, to sit and cry beside the ruins of their once beautiful farmsteads. It was the first touch of Kitchener's iron hand; and we were the knuckles. It was a terrible thing to see, and I do not know that I want to see another trip of the sort, but we could not help approving the policy, though it rather revolted most of us to be the instruments.

"I am glad to say the artillery were exempt from it. During the days that followed it was our duty to go into action on the hills and cover with our guns the troops who did the burning. We did not get anything like a fair share of the loot, but I do not think my men objected to that. We burned a track about 6 miles wide through these fertile valleys, and completely destroyed the village of Wilpoort and the town of Dullstroom. The column left a trail of fire and smoke behind it that could be seen at Belfast. Some of the houses that were too solidly built to burn were blown up. Away off on a flank you would see a huge toadstool of dust, rocks, and rafters rise solemnly into the air and then subside in a heap of débris. Ten seconds afterwards a tremendous roar like the report of a cow gun would rend the air, and the dust would blow slowly away. Many of the houses were surrounded by beautiful gardens abloom with roses, lilies, and hollyhocks, and embowered in fruit trees. As we sat by the guns we could see a troop of mounted men streaming off toward a farm. With my glasses I could see the women and children bundled out, their bedding thrown through the windows after them. The soldiers would carry it out of reach of the flames, and the next moment smoke would commence curling up from the windows and doors—at first a faint, blue mist, then becoming denser, until it rolled in clouds. The cavalry would ride rapidly away, and the poor women and children, utterly confounded by the sudden visitation, would remain standing in the yard or garden watching their home disappearing in fire and smoke.

"The column marched into Wilpoort, a pretty little village surrounded by hills. The guns were placed on the hills and trained on the place, and the cavalry and mounted infantry rode into it and looted and burned every house and shop except one belonging to a British subject. The flour mill was blown up. We sat on the hills and watched the scene. When the mounted troops rode back they looked like a gang of dissolute peddlers. Their saddles were hung like Christmas trees with shawls, clocks, mandolins, teakettles, lamps—every sort of imaginable article—besides chickens, ducks, geese, sucking pigs, vegetables, and agricultural products galore. All we gunners got was the merry 'Ha, ha!' and such unconsidered trifles as the bloated cavalry chose to donate to us.

"On the third day out, about 9 o'clock, the guns were called up in a hurry to a position overlooking a pretty valley full of farms and cattle. Then the general sent the R. C. D.'s down, and they got 150 head of cattle and 500 sheep. As cattle are worth £20 a head and sheep £4 each to the army, it was calculated that our half hour's work netted about £4,000 to the British Government. The cavalry were sniped at a good deal in getting in the stock, and they burned all the houses in the valley. As soon as we were through the general pushed on my guns and left the cavalry to lift the cattle.

"On the following morning the troops were up long before daylight and marched off at 4 o'clock. In the dim, early dawn the column, nearly all mounted troops, moved swiftly north. We were going to sack and burn the town of Dullstroom. Nobody who was there will ever forget that day's work. About 7 in the morning our force seized the town after a little fight. The Boers went into the hills around, and there was nobody in the town but women and children. It was a very pretty place, nestling in a valley. The houses had lovely flower gardens, and the roses were in bloom. It was another grand place, but I was not introduced to Evangeline if she was there. We seized a hill overlooking the main street and placed all the guns on it, while the cavalry galloped through and skirmished up the hills beyond. The Boers drove in our outposts on the flank and began sniping the guns, and we all had to turn loose, and amid the row of the cannonade and the crackle of rifle fire the sacking of the place began. First there was an ominous bluish haze over the town and then the smoke rolled up in volumes that could be seen for 50 miles. The Boers on the hills seemed paralyzed by the sight and stopped shooting.

"When the lull came General Smith-Dorrien invited the artillery officers to go down into the place with him on a sort of official appearance—"just tell them you saw me" style of thing. The main street was full of smoke and fiery cinders, and as the flames belched out in huge sheets from one side or the other our horses shied and plunged from side to side. The place was very quiet, except for the roaring and crackle of the flames. On the steps of the church were huddled a group of women and children. The children did not seem to know whether to cry or be diverted by the spectacle. The women were white, but some of them had spots of red on either cheek, and their eyes blazed. Not many were crying. The troops were systematically looking the place over, and as they got through with each house they burned it. Our Canadian boys helped the women to get their furniture out, much as they would do at a fire in a village at home. If they saw anything they fancied they would take it ('muzzle not the ox that treadeth out the corn'), but they had not the callous nerve to take the people's stuff in front of their faces. Of course in the case of shops it was different. But you should see the Royal Irish on the loot! They helped the people out with their stuff by heaving bureaus bodily through the window, putting pickaxes through melodeons. You would hear one yell, "Begorry, Tim, here's a noice carpet. Oi think oi'll take it hame for the ould woman. Lind a hand here." R-r-r-ripp! Up would come a handsome pile carpet in strips. And so the work went on, the officers standing by laughing at the fun their men were having.

"I went into a very pretty little cottage standing in a rose garden on a side street. The M. R.'s and R. C. D.'s were looting it, but really helping the woman out with her stuff more than sacking the place. The woman was quite a good-looking ladylike person, and the house was almost luxuriously furnished. She was breathlessly bustling about saving her valuables and superintending the salvage operations. A big dragoon would come up to her and say in a sheepish sort of way, 'What do you want next, lady?' And she

would tell them, and they would carry it out. As I stood looking on she turned to me and said, 'Oh, how can you be so cruel?' I sympathized with her, and explained it was an order, and had to be obeyed. She was a good-looking female in distress, and had quite the dramatic style of an ill-used heroine. I certainly was sorry for her—we all were—until the house began to burn, and a lot of concealed ammunition exploded, and nearly killed some of our men. But all the same, it was a sad sight to see—the little homes burning and the rose bushes withering up in the pretty gardens, and the pathetic groups of homeless women and children crying among the ruins as we rode away."

I prefer to leave this as it stands, as the best picture yet painted of the realities of war in the period covered by the war-office returns. Since farm burning was officially supposed to have been countermanded, our military operations have consisted in little but the dispatch of columns in various directions, with instructions to sweep the country. These columns have gone out and they have swept the country; they have swept it clean of cattle and sheep, of its old men, its women, and children. They have, however, spared most of the Kaffir kraals, a fact which entirely destroys the value of the policy of denudation, for as there are 700,000 Kaffirs in the republics, each of whom requires at least two good meals every day, it is quite obvious that the Boer commandoes would never be at a loss for mealies and meat so long as there is still in the country sufficient food to nourish forty times their number of Kaffirs. The policy of sweeping the country was therefore absolutely futile from the point of view of depriving the Boer commandoes of means of subsistence. It may have had a certain value in removing women who could be relied upon to give information to the commandoes as to the movements of the British troops.

It is alleged against them that they gave false information to the English and true information to their husbands and brothers—possibly a fault in ethics, but one which hitherto has never been regarded as justifying the recourse to such methods of barbarism as the destruction of their personal property and their concentration in prison camps, without adequate shelter, food, or drink.

Before the sweeping movement began, the women were supporting themselves. They asked no charity from us; they did not seek to be protected against the Kaffirs, with whom they appear to have lived on very good terms. They fed themselves and brought up their children. They were noncombatants in the strictest sense of the word. They had no arms with which to fight, nor did they manifest the slightest disposition to take the field. Nevertheless, in order to carry out a policy of calculated brutality, and to bring pressure to bear upon the burghers still in the field by harrying and torturing their unfortunate women folk, columns were sent out in all directions with instructions to sweep the country bare. It was the devastation of the Palatinate repeated at the beginning of the twentieth century on a smaller scale, and will consign Lord Kitchener and the generals who obeyed his orders to the same infamy as that which has overtaken the generals who obeyed the orders of Louis XIV.

The following is the official report of the state attorney, Smutz, as to the result of those sweeping operations in the district which he traversed:

JUNE 25, 1901.

To His Excellency State President STEYN,
District Potchefstroom, South African Republic.

MOST HONORABLE STATE PRESIDENT: In order to inform your honor about the unlawful deeds committed by the enemy in the western districts of the South African Republic, I wish to give here a detailed account of some facts, mentioning at the same time such particulars as will serve to illustrate those facts. Your honor is, of course, to understand that these particulars are derived from evidence, given on oath, or from my own observation, so that I can fully vouch for the truth of them; they, however, do not constitute a complete account of all the shameful and unlawful deeds committed by the enemy, but are only a few typical cases picked from an amount of material to enumerate and explain which time is wanting at this moment.

During the month of July, 1900, I was ordered by my government on a mission to the western districts, which had been cut off from communication, and from Balmoral Station set out for these districts, but on arriving at Elandsriver I was recalled by the Government on pressing business and returned by way of Bronkhorstspruit Station. I arrived here late in the afternoon, and on that high tableland, and in the middle of winter, it was so fearfully cold that I could hardly bear it, and (according to official reports) many English soldiers had succumbed there with starvation.

Hardly had I arrived there when I saw in a cart two women and some little children. One of the two women was an old widow, Mrs. Heethling, of Tierpoort, the mother of the magistrate (landdrost) of Klerksdorp and a relation of the much-respected clergyman of Stellenbosch; the other woman was her daughter, Mrs. Du Toit, and her children. Their condition in that bitterly cold climate was most heartrending, without any food, without any covering, with nothing else about them than the clothes on their backs. That old mother, over 70 years old, told me the following things: Tierpoort, some weeks before, had been lying in the field of battle during the skirmishes which preceded and followed upon the great battle of Donkerhoek, and from the fields behind our dwelling our men had repeatedly fired at the patrols of the enemy.

At one time some Boers had ventured as far as the house and she had given them a loaf of bread; when one evening, a short time afterwards, an English officer came to the house with a strong patrol and gave her notice to leave her house that same night, as the place was to be burned down next day. She called his attention to the fact that this would be impossible, as all the cattle and the carts had been taken away by the English and that she was too old to walk so far as the Boer lines. He remained inexorable, and was so impudent that the grown-up daughter of Mrs. Du Toit, who was her interpreter, told him that he ought to feel ashamed of persecuting defenseless women and children in this way instead of fighting the Boers, upon which he so far forgot who he was that he gave her a slap in the face. As he would not give in, a messenger was sent to the Boer forces that same evening to fetch an ox cart. When the cart had arrived, this knightly officer (an Australian colonist) refused to allow that some food, clothes, or bed clothes were put in the cart, and in this wretched condition these poor people had to be sent out into the wide, wide world.

Her youngest son, Johannes Heethling, was with me at the time, to her immense joy, and whatever I could spare I gave her to take along with her on her journey to the Boschveld. Having only in the world her daughter and granddaughter, she was, however, full of courage and strong in faith, and even succeeded in cheering us up. I do not mention this as a rare case, but as a typical example of what happened in hundreds of other places. And this happened even in the best of times, when Lord Roberts was still negotiating about a general surrender, and was full of expectation about reaching his aim. But when circumstances made it certain for him that we would keep up the struggle till we had regained our liberty or had died arms in hand, it was then as if all bounds of civilization and humanity had been broken down by a wild hurricane of unbridled rage. I can not help acknowledging when I reflect upon what I witnessed and experienced since in the western districts, that I feel altogether incapable of giving a description, even a mere sketch, of the devastation brought about by the enemy, of the pains and troubles caused to us which have touched the hearts of our women and children as if they had been pierced by steel.

Let me take as an example that part of the Krugersdorp district situated between the Magalies and Witwaters mountains, one of the most beautiful, most fertile, and best cultivated parts of South Africa—the so-called "fillet." When I came to these parts in July, 1900, the land was green with an uninterrupted series of cultivated fields, gardens, and charming houses and farmsteads, a delight to the eye and a proof of what our people had been able to do with respect to agriculture in half a score of years. And now? It is now a withered, barren waste; all the fields have been destroyed, the trees of the gardens cut down or pulled up by the roots; the homesteads burned down, the houses in many cases not only destroyed by fire, but blown up by dynamite so that not a stone was left unturned; a refuge only for the night owl and the carrion birds. Where, till lately, everything was life, prosperity, and cheerfulness, death now reigns. No living animal, no woman, no child, not even a Kaffir woman is seen but with traces of anxiety, misery, nay, even with starvation distinctly visible in their faces.

Oh, one needs the pen of Isaiah or Jeremiah to be able to describe these horrors of destruction. I do not think that since the thirty years' war, and the devastation caused by the armies of Tilly and Wallenstein, such a scene of total destruction has been witnessed. How often did not I sit on the slope of the Magalies Mountain and looked down upon the many farmhouses, fields, barns, and warehouses as one pool of fire and flames. When we wanted to fight the enemy the troops took refuge behind the dwellings in which our women and children were, so that it was impossible for us to fire at them. When we wanted to shell their camps they were full of our women and children kept there as prisoners. Old men with one leg in the grave were taken prisoners in the basest manner and driven along before the troops. Old Gert Oosthuizen, 75 years old, was sent with a flag of truce by General Clements to General De la Rey to request us to confer with him (General Clements) on the state of the country. When we positively declined to hold such a conference on the state of our own country, devastated by them, he flew into such a passion that he ordered the old man to be seized and to be removed as a prisoner of war. Even children of 12 years have been taken prisoners because, in the opinion of the English officers, they looked too much like warriers!

And what about the women and children and all the sufferings to which they were and are subjected? In the pocket of an English officer, who fell in the battle of Boschfontein, we found a letter in which he explained in a humorous way how he went about it. In a house he had called together the women and children and they were compelled to hear "God save the Queen," being played on the piano, accompanied by the singing of the soldiers who were present, after which the house and whatever it contained was set on fire. In another place the women and children were told that they might remove from the house whatever they liked, as the house was to be burned down. They were allowed one hour to do it in. When they had carried everything outside and piled it up there this lot was also set fire to. And this officer tells these things as if it was regular fun. Truly, the insults, the scorn, and the contempt, the brutal rudeness with which these innocent women and children were treated, and are being treated, is beyond a man's comprehension. If this is the way in which officers think and act, what then is to be expected from a common soldier, what from a Cape boy and the Kaffirs, with whom the English army is infested. Very often women and children are beaten by them, as the case of the old widow, Mrs. Coetzee, of Elands River, Rustenburg, whom, after the English forces had left, I found in a deplorable condition on account of the ill-treatment she had undergone.

But I want to give another example of the manner in which our dear country is being destroyed.

In the afternoon, when I had left the said Mrs. Coetzee, I went on a scouting tour along the Doorn River (a tributary of the Elands River), which part had been visited by the army of General Douglas the day before. I was well acquainted with this neighborhood, as our forces had encamped here when the camp of Colonel Hore on the Elands River had been besieged. It was night, but the moon was out when I arrived there. My companion and myself came to the first farm and found that everything had been destroyed and burned down here. I came to the second farm, which had not been burned down, but plundered, and not a living soul was left in it.

That same night I passed by some 12 or 14 farms successively which had all been burnt down or looted, and not a living being left behind in them. Truly, it rather resembled a haunted place than that magnificent, thriving neighborhood which I had left in all its glory about a month before. Late that night I lay down to sleep in the yard of one of these deserted places. Everything in that beautiful property (Doornkom) had been plundered and destroyed. The owner, Mr. Mostert, is a prisoner of war in St. Helena, his wife has died, and some little orphans were left behind alone, with some relations. But even their innocence and youth and the exile of their father could not satisfy the vindictiveness of the enemy. That night I reflected upon the fate of the many families of that district, and in the morning I found to my great surprise that they all appeared from the neighboring hills like badgers from the ground. The women had fled with their children to those parts, thinking that they were safer with the wild beasts in the fields than under the protection of the colors and armies of Her Majesty. Some of the women in these parts had been cruelly ill-treated, even dishonored by Cape boys, and had fled among the mountains on horseback for three hours, hiding themselves at Boksloof.

Truly, the most unfeeling person can not help shedding tears of compassion at this state of unutterable misery. That afternoon I rode from Boksloof to Costerriver, where I met with the same devastation and misery. No fewer than seven families, consisting of women and little children, were living under the trees in the open air, in spite of the heavy rains. Even the tents had been burned. This destruction had been brought about by Generals Paget and Plumer.

By entering into all the details I should only tire your honor. I shall, therefore, mention only one more case, to show how the women and children were treated by the forces of these generals. When the enemy had come to Groenfontein on the Costerriver, brave old Luikes van de Werve, contrary to the orders of General De la Rey, had ridden on and had fired at the hostile scouts from behind a wall on his estate.

His wife left the house to beg him not to do so. She was at once fired at and mortally wounded in the head. Her husband then carried her into the house and was immediately taken prisoner there, and transported to the English camp. The dying woman and her three or four little children were then carried out of the house, and the house and its surroundings burnt down. She was taken to the house of one Mr. Albert Bibier, where also a number of little children were. She had scarcely arrived there when the house was plundered in a most horrible manner, so that not a rug or pillow was left for the dying woman, and all the food destroyed by fire. Mrs. Bibier protested against this violence, and asked the soldiers how she was now to feed her little ones and the little orphans, to which they replied, "Let the Boers look after you and give you food." She was allowed to save only a double handful of mealie flour from the flames.

The estate of Cijferfontein, belonging to Paul Grobler, had not only been looted and burnt down, but his mother-in-law, an old widow over 70 years of age, who more than once had told me the sad story of the pioneers of Natal

and the Orange Free State, whom she had accompanied at the time of settling there, had been ill-treated in a horrible manner. The soldiers had thrown her down on the ground, partly undressed her, and then by violence taken from her all the money and objects of value which for safety's sake she had hidden about her person. They left her for dead. I mention this case only as an example of what happened almost daily and is happening still. I see from the foreign newspapers that the way in which the refugee women and children of burghers in the field are being treated causes considerable excitement in the Colonies, but if abroad a hundredth part of what is done within the boundaries of the Republics were known, all Christendom would rend their clothes and utter an immense cry of woe in the face of heaven, as a protest against this indescribable barbarity.

What surprises me most is the unflagging perseverance of these ill-treated women, and this perseverance, so tragic, so immensely grand, owes its origin not only to an unshaken belief in the great future which is before our people, but a firm reliance on God. A person one day told me that while an English officer was setting fire to a house and all it contained, the woman called her children around her and began to sing in the open air, "Praise the Lord with cheerful voice." Even that officer was moved to tears, but he was obliged to finish his task. The very martyrs of the Middle Ages never showed a more firm belief and greater perseverance than the Boer women of to-day. There is no doubt that such women must be one day the mothers of a bold race. I can declare to have heard almost everywhere that the enemy now rather relies on the consequences of starvation than upon his own arms.

Therefore articles of food are being destroyed, carriages, carts, mills, plows, tread and threshing machines are burnt, weirs broken down, even the coffee mills broken to pieces, because the women used them to grind their corn. It will be of no use to the enemy to do all this, and our women will rather live the life of termites than give up their struggle for their sacred rights on account of hunger.

It is not necessary that I should enumerate the names of all the other parts and districts that have been ravaged. The whole country, the whole Republic has been destroyed to the root. The same scene of annihilation and misery is seen everywhere. Poor women and aged ones are seen everywhere flying with small herds of cattle which the enemy has not yet been able to seize; diseases reign freely, for our Boer doctors have been taken prisoners, and all their medicine taken by the enemy; and the doctors who were on the English side have gone over to the enemy.

I shall therefore speak of another subject—namely, how the enemy avails himself of the help of Kaffirs to make our women and children suffer greater pains. I do not intend to speak about the old story how natives were enlisted and imported by the British officers along the western and northern borders of the land, which, your honor knows, has been proved by documents now in possession of the Government. The massacre at Derdepoort, and at other places on the western border, have been surpassed by what has happened since May last. The Kaffir chiefs, having joined the enemy, crossed the western border and committed murders and cruelties from which even English soldiers shrank back. The consequences were that the greater part of the western and northern districts had to be abandoned by us, because the women and children were constantly exposed to being murdered. Camps for the women were then made in the central parts of the western districts, and the women provided with carts, tents, food, and placed under the protection of old men who were less fit for military service. It was expected that the enemy, from a sense of pity, which is even found with animals, would have left these camps for women alone.

But not at all! He repeatedly marched upon them, burnt the carts, tents, and the food, seized the aged guards who had not been able to fly, and caused so much misery as can not be described. And where he did not appear himself the enemy sent the Kaffirs, or rather the hordes of Kaffirs that always formed a wing of the British forces, and completed the work of destruction which had been undertaken by the English troops. Many a time it was my task to visit these women camps, and I can not help saying that I had never expected to be a witness of such scenes of misery—the women and children suffering, almost every one of them, from malaria, fever, and other diseases, in consequence of privations and bad food, without physicians, without medicine, without any consolation in this world, almost without any clothes, and after hostile raids, without any food at all. And all these women did not belong to the poorer and lower classes, but some of them belonged to the richest families of our country. But privation could not curb the spirit of these noble martyrs, and by one consent they advised me and the burghers to persevere to the bitter end.

It would bore your honor if I were to enter upon details; I only wish to give an example to show how the British and the Kaffirs cooperate in this satanic work. Commandant Riekert, of Rustenburg, is much hated by the enemy, as your honor will know. His wife, a lady of whom our people ought to be proud, had established a hospital at Rustenburg at her own expense, where she nursed some 15 sick and wounded persons, left behind there by Commandant C. R. De Wet on his memorable march from Bethlehem. Whether this was an unpardonable sin in her I do not know, but the fact is that when, some time afterwards, the enemy retook the village of Rustenburg he invented for her a refined chastisement, and sent her into exile with her daughters and daughters-in-law 7 miles beyond Rustenburg, to the farmstead Paardekraal, in the neighborhood of the robber Kaffirs.

Here lived no other white being than an old greybeard, Hermitage. She complained in vain that she had no food, and should have to perish with hunger or be murdered by the barbarians. The English paid no attention to her complaints, for it was this very punishment they had invented for her. After having suffered immensely she was one night obliged to fly to save her life, and a woman in nightdress got as far as Rustenburg informing the people there that every soul at Paardekraal had been murdered. Afterwards it fortunately appeared that only old Hermitage had been murdered; but the agonies these poor women had had to bear I need not describe. After all, these women and fifteen others and their children were sent off to the Boer ranks, because the enemy thought that there at least they would be starved to death.

That this way of waging war against defenseless noncombatants and the destruction of private property, which only indirectly has connection with the continuation of the war, are against the articles of modern international law need not be proved. Numerous English lawyers of name, minutes and conventions signed by England in all solemnity, not only condemn these deeds, but most seriously forbid them. The teachings of Wheaton, Phillimore, Van Hall, are one with the war regulations of The Brussels conference and the rules laid down by the late peace conference of the Hague, approved of and signed by the British Government; and each and all say by one consent that private property or estates, not being contraband, are unassailable, and noncombatants must be left alone. To justify himself, Lord Roberts, in his proclamation, appeals to our supposed way of waging a war which he calls guerrilla. He says that he will make use of every means employed by civilized nations under such circumstances to put an end to this guerrilla. I deny that we do keep up a guerrilla; but if we did, would it justify what English officers have done?

The legal authorities and the solemn conventions do not distinguish between a guerrilla and other lawful ways of carrying on a war. The question is, Do we wage a lawful war, and are we acknowledged combatants, and, as such, protected by the international military laws? We do. And it is acknowledged and confirmed by English proclamations. We are no brigands or criminals, but lawful combatants, and, as such, appeal to the international law and the conventions signed by England. I openly claim to be as well informed about the law as those on whose advice the proclamations and the doings of the British Government and the military authorities were based; and passing over, of course, acknowledged barbarities and strange doings disapproved of by the best legal authorities, I deny that in the annals of civilized warfare precedents are to be found to justify a general burning down of country seats and villages, destroying all food, treating women and children as prisoners of war, and that they are banished to foreign parts, without even mentioning more horrible treatment.

And I deny that we carry on a guerrilla. Was it guerrilla warfare when, on December 3, near the Sterkstroom and on the ground where this terrible destruction took place, General de la Rey and myself took the English camp and captured 130 heavily laden carts, more than 3,000 oxen, that more than 100 men of the enemy were killed and wounded, and more than 100 captives fell into our hands? Or was it a guerrilla war when, on December 15, the Generals de la Rey, Beyers, and myself attacked the camps of the Generals Clements and Legge in their fortified positions on the Magalies Mountain at Nooitgedacht and defeated them after one of the fiercest battles fought in this war; that we took away their camp and made about 300 prisoners of war, and there were more than 400 killed and wounded English soldiers, among whom General Legge, who had been slain, who fell into our hands? I will not even speak of the other great battles fought in the two Republics in the last months.

This is truly no guerrilla where large armies of the enemy are cut to pieces in this way. The truth is, a new way of waging war has been developed by us, to which the enemy wrongly applies the old name of guerrilla. After fighting in the old-fashioned way during the beginning of the war with all our forces and convinced that the superior numbers of the English were too strong for us, we have made a new plan, in which strategy, mobility, and the disposition of small forces over extensive grounds are of much more importance than fighting a pitched battle, but not in the guerrilla manner. We are always in touch with the other parts and divisions of the army, and when time and place are favorable we can always concentrate our troops, with the effect that we can crush the enemy. We do not carry on a guerrilla war; the Boers will never be able to do so; their character and their ideas of soldiership are contrary to it. That they are properly ordered troops, as well as the humane way in which they have persevered till now in this war, which is such a bitter but sacred struggle for them, does not excuse the enemy in the least from committing his atrocities.

This barbarity, however, has had this advantage for us, that it has placed in the background all the subordinate interests of our burghers and such of their aims as were against the fulfillment of their duties. They have no longer any estates or worldly property to protect; many even have no women and children to provide for. Pressed down by the yoke laid on their shoulders, they now feel what their independence is worth, and are full of a sacred fire to deliver their beloved ones from oppression, to set free the colonial brethren imprisoned yonder for the sake of our independence, and to bring about most carefully a peace for the whole of South Africa which will not be unworthy of the many precious lives that have been lost and the great sacrifices that have been made, the blood and tears not only shed by our ancestors, but principally by that blood and those tears shed in this struggle.

I have the honor to be, your honor's most obedient servant,

J. G. SMUTS,
State Attorney and Assistant Commandant-General of the South African Republic.

I have quoted Mr. Smuts's letter at length, because of the character of its author and because otherwise it would never meet the eyes of the public. It is probable, however, that a more vivid idea of the kind of devastation which has gone on in the Transvaal and the Orange Free State will be gained by the simple narratives of those whose houses have been destroyed and the blunt, straightforward stories told by the men who have been engaged in the operation.

The chief source for the narratives of the sufferers is the appendix of Miss Hobhouse's pamphlet. Soldiers' letters, on the other hand, have never been collected, excepting for the first period of the war. In a volume entitled "Pen Pictures of the War," published by Horace Marshall & Sons, there is a copious collection of soldiers' letters which give a more vivid account of the actual fighting and campaigning than any of the letters of the special correspondents, but this volume only comes down to the battle of Colenso, and no second volume was ever published.

Comparatively few letters are now published from the front, partly because under the rigorous censorship very few are written, and partly because the novelty of soldiers' letters from the front has long ago disappeared. Nevertheless, newspapers from time to time do contain letters, and occasionally interviews, which shed a vivid light upon the extent of devastation which is going on. Here is an extract from a letter by Mr. McCormick on St. Patrick's Day, 1901, to Mr. W. E. Jones, the branch secretary of the National Union of Dock Laborers. Mr. McCormick, on the 17th of March, was in Potchefstroom Hospital, and in this letter, after describing how they had burnt a town in the Transvaal merely because the Boers had captured it, he gives the following interesting account of the state of the country through which he passed:

"I suppose you have read about Kitchener's proclamation telling the Boers to lay down their arms and go to their farms. Well, I have traveled through the Free State and the Transvaal and I can say for a fact that there is not a farmhouse fit for habitation in the Free State or Transvaal. They are nearly all burnt, and those that are not burnt are deprived of all woodwork, such as window frames, doors, and beams. Wood is very scarce here. As for pigs and fowls, there won't be one left in the two countries when the war is over. Everyone who has a fowl has to get wood to cook it, and they go to farmhouses and wreck them for wood. In January we were a month burning houses. When the prisoners are released from St. Helena and other places and see the state of their farms and houses, they will have a stronger hatred against the British nation than ever they had."

From which it would seem that Private McCormick has more statesmanship in the head of him than most of our rulers and governors.

On the 26th June last the Daily News quoted from the Warwickshire Advertiser an interview with a Warwickshire yeoman who had just returned from the war. I am particular to give the dates, because the pretense is still kept up in some quarters that farm burning ceased long ago. This yeoman, whose name is not given, but who is personally known to the editor of the Warwickshire Advertiser, spoke very frankly and to the point on this subject.

He was attached to Paget's column, and he told the editor that since Christmas, and apparently down to the time of leaving Africa in May last, save for periodical encounters with isolated bodies of marauding Boers, Paget's column had been occupied with the burning of farms. In reply to a question as to whether the farms were burnt because of acts of treachery or concealment of arms, this yeoman replied:

"I don't know about finding Boers or arms. All I know is this: That some days we would start off early in the morning and try, during the whole day,

to burn as many farms as we could. I never saw one in some districts that was spared. We used to ride up—half a dozen of us—to the farm door, dismount, and rap loudly with our rifles on the wood. We didn't wait for an invitation. In we went with a rush and said to the woman, 'Come on, pack up, missus; there's a cart waiting for you.' And we gave her ten minutes to get a few things together, and then, with the youngsters, she was packed into the open wagon and driven off to the nearest camp."

"Did you ever find Boers or ammunition hidden away?" "Never, during the whole time, except a few loose bullets lying about in different rooms."

"Then why did you burn the farms?" "By the general's orders. We used to have plenty of fun. All the rooms were ransacked. You can't imagine what beautiful things there were there—copper kettles, handsome chairs and couches, lovely chests of drawers, and all sorts of books. I've smashed dozens of pianos. Half a dozen of us would go up to as fine a grand piano as ever I've seen. Some would commence playing on the keys with the butts of their rifles. Others would smash off the legs and panels, and, finally, completely wreck it. Pictures would be turned into targets, and the piano panels would be taken outside and used as fuel to boil our tea or coffee. After this we would set the building on fire, and as we left, riding together or detached over the sandy waste, we could see the flames rising up, and soon there would be nothing left but black, smoldering embers. We would do the same with the next farm we came across."

"The speaker then went on to describe how news of their approach had often been carried to the inhabitants of the farm, and before the punitory party arrived the house had been deserted and all the cattle and valuables carried off. On these occasions they undertook the task of making a bonfire of the building with even greater relish than on ordinary occasions.

"Another of the returned yeomen, alluding to the same subject—farm burning—said many curious finds were made in the Boer houses. Copies of the Sphere and the other weekly London illustrated papers had often been picked up, all carefully preserved, and plentifully dog-eared Dutch books of instruction were common. 'But,' he added, 'it would be useless detailing the contents of the houses. All you have to do is to imagine yourself with a number of chums walking casually into a respectable gentleman's house in Warwick and pocketing what you thought you wanted. It's just the same out there.'

"Another of the Warwickshire men found, whilst overhauling a box of trinkets, £40 sterling. Smaller sums in gold were often met with on these predatory expeditions."

The account given by these soldiers exactly tallies with the stories told to Miss Hobhouse by the women whom she interviewed.

As late as May 30 last the work of farm burning was going on merrily around Standerton. A private soldier, writing on that date from that neighborhood, says that he had been for three weeks with Brigadier-General Remington:

"He is a splendid soldier. We have been chasing Hans Botha, and capturing cattle, sheep, horses, etc., and burning down the farms and grass all over the country."

Yet Mr. Asquith can speak of farm burning as an episode that happened for a few weeks last year.

On May 21, 1901, a soldier belonging to the Second Queen's R. W., Surrey, writes:

"We only went out for five or six days. We burned down about thirty farms and brought in the wives and families, and burnt all the grass and everything that came in the front of us; and they are doing the same everywhere now. We took all the cattle they had, smashed all the furniture, and then burnt the lot, and so I expect they won't be able to stick that for all the winter."

To whichever part of the seat of war we turn, it is the same story. Farm burning was going on all through April and May. At Lydenburg a correspondent of the Westminster Gazette says:

"The Transvaal, but particularly that portion between Pretoria and Lydenburg, presents a very desolate appearance. Every farmhouse is demolished, trees cut down, fences torn up, and what was once a happy homestead is now the ruins of one."

From Ficksburg a private in General Rundle's division wrote on May 10:

"Since we left Harrismith we have been on the march, burning farms and houses and everything we come across."

A trooper in the sharpshooters' corps of the Imperial Yeomanry, writing on May 7 an account of the operations of his column after it left Standerton, says:

"We have been very busy to-day and yesterday burning farms. We take all the fowls, etc., and then set light to the houses. It is rather beastly work, but very necessary, in spite of what our home critics may say."

Two days later Trooper Tom Molloy, of the Seventeenth Ayrshire Company of Imperial Yeomanry, wrote from Senegal:

"We had some good fun at Reitz; we burnt the place so that you would not know it. We broke all grates, pans, etc., and the furniture. We turned the pianos upside down, picked the notes to pieces, and then threw them out of the windows."

On May 10 a soldier in the C Squadron of the field force under Gen. Sir Bindon Blood says:

"We had a fine time burning all the farms and houses and destroying everything."

A royal engineer, writing from Machadodorp on May 14 last, said:

"When we come to a farm we take the women and children to the nearest refugee camp and then burn the house. It is the only way we can prevent them from helping the Boers."

From a letter from a reservist in the Oxford Light Infantry, published by the Boston Guardian, it would seem that native kraals share in the general devastation. The writer dated from Heilbron on April 17 last, and his brief account of his doings is undoubtedly interesting and suggestive:

"The first day out from here was quiet, but we burned all farms, native kraals, outbuildings, and other places that might afford shelter for the Boers in bad weather; we also killed all fowls, ducks, geese, and pigs, turkeys or any kind of poultry, and collected all horses, cattle, and sheep into herds, and drove them along with us; and I could not help thinking what a waste it was to kill good things for the sake of killing, after we had halted; but it was grand sport chasing young cockerels and chopping geese's heads off, hearing pianos play as they were rolled upside down onto a fire lit in the middle of a room, piling pictures and brackets, etc., on a deal table and then putting a straw mattress underneath to start the blaze.

"On the second day we had over twenty fires on the go before 9 in the morning; and had got about 6 or 7 miles from our last halting place when we got a check for a couple of hours, as we had to clear the front before we could get any farther.

"Next morning * * * we destroyed the nicest residence I have seen in the country. I forget his name that used to live at it. He was next in position to the President of the late Orange Free State Republic. It took us all the afternoon to get it all destroyed.

"The thrashing machine made the best fire, but the most interesting part for me was to see the explosion of a traction engine that worked all the farm machinery. It was built in England, and it was over an hour from the time the fire was lit before the boiler burst."

On November 16 Lord Roberts issued the following order:

"As there appears to be some misunderstanding with reference to burning of farms and breaking of dams, commander in chief wishes following to be lines on which general officers commanding are to act: No farm is to be burnt except for act of treachery, or when troops have been fired on from premises, or as punishment for breaking of telegraph or railway line, or when they have been used as bases of operations for raids ,and then only with direct consent of general officer commanding, which is to be given in writing. The mere fact of a burgher being absent on commando is on no account to be used as reason for burning the house."

The foregoing letters show that no attention was paid to this. Writing on February 6 last, Sergeant Manger, of the Border Regiment, said:

"The burning of farms has turned out a failure and has been discontinued. It has been a cruel and useless destruction of property."

In the same letter it may be noted incidentally that Sergeant Manger throws a little light on the question of the arming of the natives. He says:

"I see it noted at home that we arm the natives. We certainly don't arm large bodies, but the black scouts carry Lee-Metfords, and are supposed to defend themselves when attacked."

But the good sergeant was mistaken in believing that destroying farmhouses was discontinued. Many references in the soldiers' letters show that they do the work of devastation with sinking hearts. For instance, a Kerry soldier, who had been employed in General Settle's column last year, according to his own account, was marching through the Free State into the Transvaal "and burning every house that came in our way." He says:

"To tell the truth, I did not like to see the poor women and children turned out of their homes, as it reminded me of dark days in my own country, but I, as a British soldier, must trample on all these thoughts."

Corpl. J. B. Wild, of the Oldham Yeomanry, writing on December 7, three weeks after Lord Roberts's order, to a friend in Oldham concerning the march of General Settle's column from Ramah to Edinbro, in the Orange Free State, says:

"We marched via Luckhoff, where we set fire to all disloyal subjects' houses and took all their cattle away from them. That was what we did all along the line of march. It will mean that the Boers will have nowhere to go and nothing to eat."

The son of James Cooke, clerk of petty sessions, now town butler (Fermanagh Times, January 31), writing a week later when en route for Durban, December 14, 1900, says:

"I have enjoyed the experience of the last few months immensely. * * * We were known as policemen, but our duties were very different from those of the policemen you have in Belfast. Most of my time was employed in burning Boer farmhouses and forage, and commandeering cattle and sheep, etc., around Potschefstroom and Frederickstadt. So you see I have been having a rare time of it. The most disagreeable part of our work was the turning of the Boer families out of their homes. The women made pathetic appeals, but we had to carry out our instructions."

In many cases the destruction of property seems to have been prompted by motives of vengeance without any regard to questions of policy. For instance, Mr. Hervey de Montmorency, dating from Duke street, on June 20 last, says:

"When we retreated from Rustenburg in August of last year, after the evacuation of that town, every building in the neighborhood of the northernmost road to Commando Nek was burned to the ground without discrimination. No single act of treachery on the part of the Boers occurred on the road."

It is a melancholy fact that no English or Scotch chaplain accompanying the forces appears to have written one solitary letter of protest against this monstrous reversion to "practices of barbarism." Fortunately for the credit of the cloth, the Rev. Father Timoney, chaplain to the Australian Bushmen, had a tender heart. He wrote on October 14 last from Loon's Farm, Molopo River, as follows:

"Then began the most diabolical work I have yet witnessed. Every house in the valley, probably twenty in all, was burned to the ground. Women and children stood in groups, the children rending the air with their cries. They were allowed to move their furniture before the match was put to the building. The women were admirable. Not a tear bedewed their eyes. They stood there defiant, neatly dressed in black, with snow-white aprons and bonnets. It was only when I said a few sympathetic words to one woman that she melted into tears. 'You,' she said, 'do not approve of this?' 'I loath it,' was my reply. 'I am,' she said, 'a British subject from the Protectorate. We rented this farm from an Englishman, to whom it belongs. We have nothing in the world but these crops, which your horses have destroyed, and—God help us!' I asked her the age of her baby, whom she carried in her arms. 'One month yesterday,' she replied, showing me the innocent face of the infant. 'Will you,' she said, 'try to save my house from the fire?' 'I shall do so at once,' I answered, and I kept my promise, but my pleading was of no avail. The woman stood there on the greensward, one child in her arms and three others hanging to her skirts, while her home was falling into ruins and the flames rose 40 feet high. I told the heroic woman that I had tried to save the house.

"'Will you shake hands with me?' was her reply. I did so right heartily, and she called me aside to show me the relics of a new white apron. 'It was from this,' she said, 'I tore the bandages for one of your wounded men (Beaumont). I carried him in my arms from the field and bandaged his arm. He lay on my bed until the blankets were sodden in blood. And this,' she said, 'is my reward,' waving her hand toward the house in flames. 'This is the work of the Australians. They are not soldiers—they are house burners and looters.' I begged to disagree with the woman, but her face was now livid and her eyes sparkling with rage. 'My boy, Otto,' she continued, placing her hand on her head, 'is only 10 years old, but I trust I shall live to see him handle a rifle, and avenge this insult on his mother.'

"The next house belonged to the man whom the sentry shot on Thursday night. 'My husband was shot by one of your men last Thursday night,' she said; 'I am left alone with these four children. Surely the blood of my husband should wipe out the crime of which he is guilty—fighting for his country.'

"Her pleadings were in vain. Her house was burned down, and she looked on proud and tearless, the beau ideal of a valiant woman. But why should I weary you by repeating the harassing, heartrending scenes I witnessed that day? There were probably 100 women and children left homeless in one afternoon. They were ordered to leave the wooded valley and cross the Molopo River, there to live on the treeless plain.

"The wiseacres say that this vandalism will terminate the war. My opinion, shared by every intelligent man, is that it will prolong the war indefinitely. I might refer to the open theft which is called looting, and which is daily indulged in by our troops. The Turks would shrink from such barbarism. Even the Kaffirs do not burn houses. And I am not giving hearsays. I am just recounting in a hurried way a part of the horrors I have myself seen. My belief is that during the present war the Boers have shown more mercy, more honor, and more honesty than many of our troops who are not immediately under the eye of Lord Roberts.

"The war was not at an end. The Transvaal may be crushed for a time—it will never be conquered. Captain McDermott, from Dublin, a nephew of

Charles Stewart Parnell, was so indignant at the barbarism that he asked me and Dr. Kelly to come away."

The narratives of the Boer women which are reported in the appendix to Miss Hobhouse's report refer, for the most part, to incidents which happened last year. They are therefore not of value as proving that the destruction of farms has been systematically carried out down to the present time, a fact which is sufficiently attested by the evidence quoted from the soldiers' letters, but they are very interesting as showing how the operation appears to its victims. Before quoting any of the letters, it is worth while to note what Miss Hobhouse says concerning the women who have been burned out of house and home, and whom she found treated as prisoners of war in the camps which she visited. She says: "The farmers' wives in this country compare very favorably with English ditto. They have less book learning and less fashion, but mostly speak the two languages freely, and with far more dignity and breeding. You feel at once that they hold the position of ladies in their own country, and they behave as such." Of course the sufferings of the poorest working woman are as much worthy of attention as those of the finest lady in the land. But, human nature being what it is, the fact that we have turned Tommy Atkins loose to burn and destroy the houses of ladies of dignity and refinement will probably appeal more to our own people than anything else. One of the innumerable falsehoods which have been palmed off upon the House of Commons by Mr. Chamberlain and others was the statement that the Boer houses were miserable hovels built of mud, which cost nothing to build, and the destruction of which need cause no concern. This is certainly untrue in the light of the report which Miss Hobhouse brings back with her from South Africa.

For instance, "at Boshof, old Mr. N. reports that he left his wife on the farm a large one of 10 rooms, costing £2,000 to build. Since he arrived here in Kimberly word was brought that the farm had been burned, but the commandant says that it was done by mistake." There appear to have been many houses of this kind that were burned. The fact that the soldiers repeatedly report the destruction of pianos, and mention that in some of the houses there were more than one, is the best proof that the burghers did not live in rude shanties. It was ladies and their children who were living in comfort, if not in luxury, who were seized by the soldiers, mounted in wagons, thrust into coal trucks, and sometimes into cattle trucks which were still reeking with the filth of their late occupants, and then flung into prison camps, in many cases to die of misery, sorrow, and privation. A narrative signed Phillipine, which appears in Appendix C of Miss Hobhouse's report, gives a very vivid account of the destruction of a farm as witnessed by its late occupants:

"On the 7th February, Phillipine writes: We were awakened by the roar of cannon. We got up and hastily dressed ourselves. We were very frightened. We sat down to an early breakfast, but could eat nothing. I could not do anything, but wandered aimlessly about, thinking of the dear ones of whom we know absolutely nothing. On going out I saw black objects on the hills. Running back hastily, I fetched the telescope, and to my horror saw that they were horsemen coming nearer every minute. Ah! how my heart throbbed with pain as I went to break the news to my poor delicate mother. Many of our neighbors' houses were burned down months ago, while some of the women and children were left on the open veldt, and others were taken prisoners. We were until then left undisturbed, but I instinctively felt, when I saw horsemen coming nearer, that our turn had come at last. About half an hour later a number of horsemen, accompanied by a small wagon drawn by mules, came up to the house. Their corporal came to the front door, while the troopers stormed in at every door. I went to the corporal. But oh, how cruelly his words pierced my heart! His greeting was, 'I've come for you. Be ready to start in about fifteen minutes.' I pleaded and begged to be left at home. I told him to take everything and burn the house, but leave us there; but all in vain. His answer was: 'If you don't come, I'll let the men put you in the wagon.' Then all was confusion."

When they came out of the house they found that the troops had killed all the poultry and pulled up the flowers and plants. They had cut up the beds and pillows, and the whole place was white with feathers. They moved away, leaving their dear old large comfortable house behind them, where they had everything they needed, and were carted across the veldt. At their stopping place they looked back, and saw the smoke of the burning farm and furniture, which we can well imagine was very painful to them.

Mrs. V. R., who was only given a quarter of an hour's notice to leave her house, was a wealthy woman.

"Captain W. had given her a note of protection, but Captain D. took no notice of it. She has a receipt for 6 loads of goods taken by Brabant.

"Her farm cost £2,500 to build. The house was 70 feet long and 40 wide, and had 13 rooms. The roof was taken off, doors, windows, and all woodwork destroyed; flooring torn up; piano and organ cut to pieces, best furniture carted to Ladybrand to furnish an officer's house. Seven hundred bags of wheat burnt, large quantities of mealies, 3,000 sheep (17 were German sheep imported, and worth alone £450), 100 horses, with a valuable imported stallion, a new buggy, wagons, cattle, etc. The farm was only 1,800 morgen, but they had another in Winburg district, where the cattle mostly were."

The worthlessness of the English note of protection occurs again and again in the narrative. Mistress F. B., of Winburg, whose house was burnt by the order of General Macdonald, had received a pass stating that they were under British protection. In September the British troops came along, and on presenting the pass to the officer he said that they were safe. The next day, however, notwithstanding the pass, the house was burnt to the ground. Mrs. F. B. says:

"Next morning, September 18, before 9 a. m., a captain and 8 men appeared. 'You have five minutes,' he said. 'I am come to burn the house.' They pleaded, but he said: 'These are my orders; I shall be shot if I don't obey.' He then sent Mr. P. to find the general, Hector Macdonald, under whom he served, saying he would be found passing in such a place with the column. In less than half an hour, before the farmer could get back, the captain set fire to the house. Mr. P. said she cried and prayed and pleaded, all in vain. He told her to get out her things, and she hastily began pulling out chairs, chests of drawers, etc., with the children's clothes. Then he began to smash the furniture, saying he could not wait for that. She got out a box with her husband's clothes, and containing a small box packed with trinkets. These were: 1 gold watch, 1 silver watch, with gold chain, 1 diamond ring, 2 plain rings, 1 pair earrings, set of silver studs, silver bangles. All of these were stolen, besides her husband's shirts and other clothes.

"In answer to her distress the captain gave her a paper (unsigned). It is a somewhat poor exchange for a burnt home."

This continual recurrence of breach of faith explains and justifies the angry outburst of Mrs. B., of Brandfort. Miss Hobhouse says:

"Mrs. B., a really handsome woman, with a fine family, was one of those who early in the year went out from Brandfort to ask the Boers to give up. They refused. Now, she says, we are a ruined people. We will fight through. Roberts's first proclamation, if kept, would have ended the war; but it has been lies, lies, lies."

Another lady, whose narrative is the last in the report, gives the following account of her experience of the value of Lord Roberts's word:

"On May 14 I went to my neighbors with Lord Roberts's proclamation and said to each: 'Read this proclamation. If you live on your farm no harm will be done to you. So trust to what I say.'

"But what was the result?

"The first column that came, with which Captain B. was, took from all those who had remained in their homes all they had of cattle and horses."

Fourteen days afterwards a major came along with a lot of armed Kaffirs and carted them away to the camp. I am glad to note the following expression of indignation from an Australian who witnessed the incident:

"Madam, so many lies have been told in our land about the uncivilized ways of your people, but the shame is the way the women are treated."

The excuse for this piece of bad faith was that the burghers had taken off her son-in-law. She says:

"I brought it before the justice of the general that I had told Captain G. I was not responsible for my son-in-law. * * * I told the captain over and over again I am not answerable for Mr. S., my son-in-law. He said, "Yes; you are." I requested if I might stay by my husband's grave in my garden, which I and my two daughters had cultivated, and which was doing well, and we could have lived out of it.

"The captain agreed, but Kitchener's orders were we women must all be removed or the Boers would not give in.

"Mrs. Combrink, who had been a widow for nineteen years, was held responsible for her son, a man of 50 years, who was fighting. She had everything taken from her—she had not even a dress. Everything was also taken from me."

The third narrative describes the burning of a village and the deportation of the men who had taken the oath of neutrality as prisoners of war to Greenpoint, Ceylon, and St. Helena.

In Miss Hobhouse's narrative there are not many complaints concerning the misconduct of the soldiers, although in some cases they seem to have acted with little consideration, as, for instance, in the case of Mrs. S., of Jacobsdal. After describing how they had burned down her house and 18 others in the village that day—"First all was smashed. Girls pleaded for dead father's likeness enlarged. Threatened to shoot Mrs. S. if she pleaded:"

"We poor women sufferers will never forget the next day. Early that morning we were informed that the general had orders from Lord Roberts to burn down the village. Half of the Boer women received orders at 1 o'clock to be ready on the market square at 2 o'clock, also telling us not to take too many things with us. If we did take too much, will not be allowed to take anything. It was dreadful to see how they destroyed the houses—breaking up floors (even the floor of the Dutch Reformed Church was broken up for firewood), breaking out doors and windows, pulling down verandahs, saying they require these things for fuel. Everywhere one could see them stealing and taking everything they could lay their hands on, even taking the small bundle the poor woman thought of taking with her. Having taken our everything, even this they took from us. Wherever one looks, misery is to be seen. It was heartrending [sic] to see how they illtreat the animals—driving cows and leaving the young calves behind. When we asked them, for pity's sake, to take the poor calves with them, they said the calves were only a nuisance."

In some cases the sufferers had been actually the hostesses of the soldiers who burned their houses. Here, for instance, is the story of Mrs. Potgieter, of Uitzicht:

"6. Compelled. Captain P. had been often in her house, and very kind—a real gentleman. He had meals often with her, and had said her house, etc., should be safe. But some generals came and camped near the farm, where there was a fight, and the Boers passed along the main road near her farm. She could not help it, and the British were pursuing. Next day, 10 a. m., a lot of men came and turned her out. It was raining hard, and she wept and prayed mercy for the children's sake. House was burned, and she was put into a wagon. She saw seven neighbors' houses burning as she went. She tried to take some furniture, etc., but it dwindled as she went, and got left behind here and there. Her house had five large rooms. At Kroonstadt she was put into the church with twenty other families, and guards all round. Kept there three days. Then they were brought down to Bloemfontein and put into camp. Was well off; has nothing now.

"A few weeks after telling me the above Mrs. Potgieter, who could not stand the life or the diet, grew very weak, sank rapidly, and died."

In some cases the destruction of property was ordered expressly in order to induce the women to ask their husbands to surrender. Here, for instance, is the story of Mrs. K., of Boshof:

"Was living in the house of a widow S., who had two sons on commando. English suspected either her or the house. For five months before her arrest English kept taking away her food to force her to make her husband surrender. During this time she had a baby. Three times they came and searched the house, and the fourth time came when baby was only two days old, on which occasion tore up the floors, broke doors, windows, ceilings, etc. At last broke all the furniture, and when baby was two months old she was brought to camp. Would not ask her husband to surrender."

This indomitable spirit seems to have animated many of these Spartan women. Here, for instance, is Miss Hobhouse's note of the evidence of Mrs. J. E., of the village of Jacobsdal:

"Husband on commando. Field cornet, an Englishman by blood, son of English parents; an English officer, Major E., fought against him at Magersfontein; it was his cousin. After the fight, October 25, the English, under Colonel J., burned her house. They would not believe her that no Boers were in the house, so burned, and found none. Drove her from her house, and would not listen to her pleadings. The 29th the Boers came back. She saw her husband, and he his blackened home. He was silent first, then lifted his hand and said: 'The Lord will provide, but now I will never, never, never give in.' She has not seen him since. November 7 English returned. She was locked in the school for several days, and no food or drink given. Early in February Mrs. E. was asked if she would take Kitchener's proclamation to her husband. She replied: 'Though you give me 2,000 troops and £100 (and I have nothing), I will not do it.' A second time she was urged, or if not she would be sent to Kimberley Camp. 'Very well, then,' she said, 'it must be the camp.'" Four other prominent women were urged to ask their husbands to surrender—in vain."

It is necessary to quote no further. In the extracts already given I submit to any impartial reader that it stands demonstrated beyond any possibility of doubt that the policy of house burning, while ostensibly discontinued, has been carried on without any intermission right down to the last day upon which we could have any information from the seat of war. Further, that the houses have been burned without any colorable pretext, such as treachery, the harboring of the enemy, or their use as storehouses for the supply of troops with munitions of war. It is, of course, obvious that troops passing through a country, whether Boers or British, would seek refreshment and shelter at the nearest house on the line of march. But it is not even alleged that the Boers had made any more use of the houses that were destroyed than our own troops.

In many cases every farmhouse seems to have been burned down, either because it was on the line of march, or in vengeance, or pure wontonness. Further, that in many cases the threat of the destruction of property and the burning was deliberately used as a means of pressure to induce the wife to persuade her husband to desert his colors. It is unnecessary to characterize conduct so unchivalrous, so inhuman, and so absolutely contrary to the practices of civilized war. Here, indeed, we have a "method of barbarism" which is worse than anything that can be alleged against us by our enemies abroad. And yet the astonishing fact is that, notwithstanding all this per-

sistent and continuous policy of pressure brought to bear on the women and children of the invaded country, no attempt appears to have been made to make reprisals. The Boers had ample opportunity in Cape Colony and in northern Natal to retaliate in kind had they felt disposed. But not even the bitterest Jingo vilifier of the Boers has been able to mention a single instance in which the Boers burned the houses of English colonists or attempted to put pressure upon English women and children to induce their relatives to desert the British armies.

I conclude this chapter by quoting from a very remarkable manifesto published on this subject by President Steyn and General De Wet. We are accused of describing the British troops as monsters and painting the Boers as archangels. The accusation is absurd, but the impression is probably due to the remarkable contrast between the system of conducting warfare by the British and the Boers. Actions speak louder than words, and the facts speak for themselves. The impression produced by the facts is deepened by the official utterances of the heads of the contending parties. Contrast, for instance, the speeches of Mr. Brodrick and Mr. Chamberlain with the sentiment of the following manifesto:

Be it hereby made known to all:

That the war which was forced on the Republics by the British Government still rages in the Orange Free State as well as in the South African Republic; that in this way not only all customs of civilized warfare, but also conventions concerning the same, such as those of Geneva and The Hague, have not been observed. He did not scruple, contrary to first-mentioned convention, to capture our doctors and ambulances and deport them, in order to prevent our wounded getting medical assistance, and the ambulance and the material appertaining thereto. He did not hesitate, contrary to the recognized primitive rules of warfare and contrary to his solemn agreement of The Hague, to arrest neutrals and deport them, to send out marauding bands to plunder, burn, and damage the private property of the burghers.

He has in this State, as also in the South African Republic, armed the Kaffirs and natives, and made use of them against us in the war. He has been continually kept busy capturing women, children, and old and sickly men. Many women's deaths have been occasioned thereby, because our so-called Christian enemy has not even had any consideration for women on a sick bed or those whose state of health should have protected them against any rough treatment.

Honorable women and tender children were not only treated in a rough manner, but also treated and ill-treated in an insulting manner by soldiers by order of their officers. Moreover, old mothers and women were raped. Even the wives, children, and the property of prisoners of war—yes, half even of killed burghers—are not respected. In many instances the mother and father are taken away from the house, and their unprotected all is left to fate, an easy prey to the savage. The world is untruthfully informed by our enemy that he is obliged to carry out this destruction because the burghers blow up the line and cut the telegraph lines (wires) or because misuse is made of the white flag. Nearly all the houses are destroyed in the Orange Free State and South African Republic, whether there be a railway line in the neighborhood or not. As far as the misuse of the white flag is concerned, it is simply the continuance of the everlasting calumny against which the Afrikander has had to strive since the time that God brought him in contact with the Englishman.

Robbing his opponent only of his goods does not satisfy him, and he will not be satisfied before robbing him of his good name also; then he wishes to inform the world that the Republics are conquered and that the war is at an end, and that only here and there are small plundering bands to be found, who continue the strife in an irresponsible manner. It is an untruth; the Republics are not yet conquered; the war is not finished. The burgher forces of the two Republics are still led by responsible leaders, as from the commencement of the war, under supervision of the governments of both Republics. The fact of their lordships Roberts and Kitchener choosing to call our burgher forces "marauding bands" does not make them such; similarly their saying that the war is over does not put an end to it while fighting is still continually being carried on. When, then, was this war over? After the battle of Spion Kop or that of Paardeberg or after the occupation of Bloemfontein or Pretoria, or is it perhaps after the battle of Dewetsdorp, on the 23d of last December, on both of which occasions their guns were captured and our enemy totally vanquished? The burghers of the Orange Free State and the South African Republic would be less than men if they allowed the enemy to go unpunished after ill-treating their wives and destroying their homes from the lust of destruction.

Therefore a portion of our burghers have again been sent into the Cape Colony, not only to wage war there, but also to be in a position, when necessary, to take reprisals, as we have already done in the case of ambulances. We therefore warn the officers of Her Majesty's troops, as we have already done, that unless they cease this destruction of property in the Republics we shall wreak our vengeance by destroying the property of Her Majesty's subjects who are not kindly disposed toward us; but to avoid being misunderstood, we hereby openly declare that the wives and children of Her Majesty's subjects will always be left unmolested by us, in spite of anything that may be done to ours by Her Majesty's troops.

We do not request anything from our brothers in the colony, but we simply call on them, as well as on the civilized world, to assist on behalf of our joint civilization and Christianity in putting an end to the barbarous manner of warfare of our enemy.

Our prayer is always that the God of our fathers will not desert us in this unrighteous strife.

M. I. STEYN,
President of the State.
C. R. DE WET,
Chief Commandant of the Orange Free State Forces.
IN THE FIELD, *January 14, 1901.*

Yet though the destruction of property in the Republics has been carried on and is being carried on to this day, and the warfare against women and children is waged unceasingly by our devastating armies, the burghers have kept their promise that "the wives and children of Her Majesty's subjects will always remain unmolested, in spite of anything that may be done to ours by Her Majesty's troops." Only in these last days have the Boers in Cape Colony burned any houses. They chiefly confined their reprisals to public buildings, and they spared the furniture. Altogether they are not even accused of having burned 10 buildings of any sort since the war began. But Mr. Chamberlain, whose emissaries have burned thousands of farmsteads in the execution of the policy of devastation, held up his hands in holy horror in the House of Commons on July 22 at these "acts of brigandage." Truly is it said in the adage, "One man may steal a horse, while another may not look over a wall." Lord Roberts and Lord Kitchener may burn a thousand farms, and it is legitimate war. But if the Boer burns one or two public buildings as reprisals it is an "act of brigandage!"

INDEX

TO THE

APPENDIX TO THE CONGRESSIONAL RECORD.

Alabama
Remarks by Mr. Thompson on Soldiers' Home in 603.

Allison, *William B.* (*a Senator from Iowa*)
Remarks by, on
Isthmian canal 643.

American Commerce
Remarks by Mr. Grosvenor on 618.

Aplin, *H. H.* (*a Representative from Michigan*)
Remarks by, on
Reciprocity with Cuba 200.

Appropriations
Remarks on, by
Mr. Benton 493.
Mr. Cannon 403.
Mr. Livingston 406.

Arizona
Remarks by Mr. Smith of Arizona on admission of 223.

Babcock, *Joseph W.* (*a Representative from Wisconsin*)
Remarks by, on
Work of Congress 402.

Banking and Currency
Remarks on, by
Mr. Cochran 477.
Mr. Fowler 499.
Mr. Newlands 633.
Mr. Overstreet 156.

Bankruptcy Law
Remarks by Mr. Powers of Massachusetts on amendment of 459.

Barney, *Samuel S.* (*a Representative from Wisconsin*)
Remarks by, on
Oleomargarine 77.

Bartlett, *Charles L.* (*a Representative from Georgia*)
Remarks by, on
Oleomargarine 485.
Reciprocity with Cuba 166.
Rural free delivery 491.

Benton, *Maecenas E.* (*a Representative from Missouri*)
Remarks by, on
Appropriations 493.

Beveridge, *Albert J.* (*a Senator from Indiana*)
Remarks by, on
Philippine Islands 267.

Blackburn, *Spencer* (*a Representative from North Carolina*)
Remarks by, on
Rural free delivery 123.

Boutell, *Henry S.* (*a Representative from Illinois*)
Remarks by, on
Oleomargarine 55.

Bowie, *Sidney J.* (*a Representative from Alabama*)
Remarks by, on
Coosa River improvement 153.

Brick, *Abraham L.* (*a Representative from Indiana*)
Remarks by, on
Pulaski statue 621.

Bristow, *Henry* (*a Representative from New York*)
Remarks by, on
Militia efficiency 352.

Bull, *Melville* (*a Representative from Rhode Island*)
Remarks by, on
Providence, R. I., public building 594.

Burke, *Charles H.* (*a Representative from South Dakota*)
Remarks by, on
Hot Springs, S. Dak., National Sanitarium 237.

Burke, *Robert E.* (*a Representative from Texas*)
Eulogies in House on 41, 74, 101.
